The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADE

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. XII.---NO. 1. NEW YORK, JULY 6, 1882. WHOLE NO. 367.

44,769

Correspondence.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, July 3, 1882.

Did you hear that howl? It was the howl of the prairie wolf, and it came from Illinois. The wolf has been over sixteen corn-growing counties in that State, as has been his custom year in and year out, and he has estimated the corn crop prospect, and has the effrontery to predict that the great State of Illinois this year can't possibly produce more than a half crop. He has just telegraphed that to all the cities of the great West through the associated press. Now, this is not agreeable news in the first place, even as a prediction, and in the second place it has the fishy look of a rumor gotten up in the interest of speculators in corn futures. Now, what has this to do with books, paper and stationery news in Cincinnati? Don't ask such a question. Who has failed to observe the decided improvement in the tone of business during the last week in June, all on account of the news of immense yields of wheat now in the shock in all the great harvest fields of the south-central West and the Southwest. All reports now adverse to the corn prospects are premature and unreliable, and they squint of a purpose to give speculators in futures an opportunity to "hedge." The fact is, that with an average season hereafter, we shall have a chance for a good corn crop this year.

There is an obvious tendency here in Cincinnati to increase the capital stock in all manufacturing establishments. A large dry-goods store has just become a joint-stock concern, with two millions capital and double that liability to the stockholders. Strobridge & Co., lithographers, have just increased their capital stock from $100,000 to $300,000. This is an immense concern, and it has been doing brilliant work, and its prospects for the future are brightening.

Van Antwerp, Bragg & Co. this city are putting out the stakes of their tabernacle amazingly. Their blank-book enterprise is a brilliant success. Their Economical Daily Memorandum is finding great popularity. This house has the traveling machinery to reach the trade, and it has a great reputation and the prestige of an unrivaled fame, which it is sustaining gloriously.

J. R. Mills & Co. have a new device for a circular for mailing. After arriving at its destination, when cut, it forms a little sort of a book with four inside pages. Patent has been applied for. It will be exceedingly popular and as it is novel as well as useful it is destined to have a run.

John Holland has a beautiful alloy of platinum and irridium. What next? He has just gotten out a line of stub-barrel gold pens, which are a novelty now, but will soon become a staple.

Fulton's gravity scales are growing in popularity. Stewart & Co., Louis Snider's Sons and Wm. Woods show symptoms of activity in business. They neither boast nor complain just now, but the activity about the establishments speaks well for them. PRINCE WILLIAM.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS,
8 Lakeside Building,
CHICAGO, July 1, 1882.

The old writer of the story of Job tells us that when the angels came to pay their devotions to the Lord Satan came also among them, and on being asked what he had been doing, replied that he had been walking to and fro on the earth and wandering up and down therein. Were one of your readers to ask the same question regarding your Chicago correspondent he could not find a more truthful answer—"the devil can quote Holy Writ," you know!

From the woods and swamps of Eastern Michigan to the bluffs and prairies of Northern Minnesota and Eastern Iowa, "from going to and fro on the earth and walking up and down therein," I return to my desk and raise my pen to wish your readers a "most glorious Fourth of July."

How considerate it was in those who established this momentous holiday that they did not set it in midwinter, when open-air speeches, fireworks, excursions, small patriots and squibs would have been impossible to all time! How fortunate also that they pitched it right into the stagnant centre of the dullest part of the year, creating quite a maelstrom or geyser of recurrent trade for the stationer, druggist and confectioner. These branches of trade ought to unite in building a monument to the originators of our national holiday,

Here, in Chicago, the sale of Fourth of July goods appears to be annually increasing, as would be supposable from a glance at our census record, showing a rapid increase of small boys. This year, Lea, the *omnium gatherum* of Chicago trade, announces a tremendous concert, speech-making assemblage, and pyrotechnic display, on the base-ball grounds as an important feature of the day. Tickets are furnished free to all who apply for them, and altogether it is regarded as one of the most audacious advertising schemes ever perpetrated in this city.

Otherwise there is little news to report from this point.

The removal of F. R. Hilger & Co., wall-paper and shade dealers and importers, have removed some time since from 204 and 206 Wabash avenue, to fine new quarters at 207 Wabash.

A. R. McDonal, recently managing for F. H. Revell, is now manager of the *Y. M. C. A. Watchman*, with his office in the association buildings at 6 Arcade court.

In my last I noted the marriage of Paul D. Hayward; I give here fuller particulars. The marriage of Paul D. Hayward, secretary of the Marseilles Paper Company, to Bella, daughter of Mr. and Mrs. H. F. J. Jackson, of Brockville, Ont., occurred at St. Peter's church, Brockville, on Wednesday morning, June 7. The affair, owing to the high social position of both bride and groom, made quite a sensation in Brockville circles, and the union is regarded as most auspicious and satisfactory. Mr. and Mrs. Hayward are "at home" Wednesdays at their residence, 235 Michigan avenue, this city.

Since Mr. Taylor has taken charge of the new Lambie dictionary holder it has had quite a run in this vicinity. Every one sold seems to guarantee the sale of an extra dozen. The inventor is to be congratulated on having met an existing want.

Grosvenor & Harger, Dubuque, report a most excellent spring trade. The house is already stocking up for the coming fall.

Elsewhere, those who have Southern trade complain that the retailers were forced to hold over last year's stock, and consequently did not and will not buy heavily this year.

From Columbus, Ohio, Charles M. Cott & Co. send circulars and samples of some very salable novelties. Among these, Cott's Patent Improved Tablet Blotter, which is claimed to give satisfaction everywhere, and Cott's packing and pressing box, for use in making up tablets. But, probably, the best selling article of the lot is the Common School Autograph Album, which is very neat, and so cheap as to be within the means of every schoolboy or girl, as they are very cheap. These albums are accompanied by a book, containing copious selections of verse and prose, for use therein. The same house offers also a children's scrap and card album at a low price.

Before closing I want to give, with all my heart, a free "puff" to the Jewell House in Winona, Minnesota. I can, with a clear conscience, recommend it to every traveling man who takes the time to glance over this letter, and assure them, one and all, that it is one of the best kept houses in the State, where one can be sure of pleasant entertainment and the most courteous treatment. G. B. H.

COLORING DRAWINGS.

Make use of the best colors only ; do not mix with two little water ; if the first coat is not dark enough, wait till dry, and give another coat. Make up your mind what portion you are going to color before applying a drop of paint ; do not stop in the middle of a wash, but when once the brush touches the paper, go straight through with the portion you begin. If obliged to leave the job for a minute, paint up to a line ; a dotted line will do if there is not a "full" one handy ; this will hide the join between the two patches of color. Do not let your brush be too wet nor yet to dry ; a few trials will soon show you the right amount of color to take up. Use the best drawing paper ; if you then find any trouble a little prepared ox-gall mixed with the color will do wonders. Clouded drawings, as a rule, are caused by letting the work dry and going over the edges again when starting afresh. No piece of coloring should be left until finished.

The following is taken from "Drawing Instruments and How to Use Them :"

When it is intended to tint drawings with ink or colors, the following rules should be observed: (1.) The paper should have the superfluous sizing removed by being sponged lightly with clean water. (2.) The paper, and everything about it, must be kept perfectly clean. (3.) Line off the spaces with *very fine* pencil marks that are to be tinted. (4). Never use the eraser on the part to be tinted, either before or after the tinting. (5.) Try the tinting process on a piece of waste paper until the proper tint is obtained, before applying to the drawing. (6.) Dark tints are formed by applying a number of light ones over each other, but a second tint should not be applied until the first one is perfectly dry. (7.) Always finish tinting one portion of drawing before leaving it ; otherwise it will be cloudy. (8.) See that the paper is damp before you begin to tint. (9.) Ink in all lines after the tinting is completed and the drawing is perfectly dry.

The colors used for representing wood, iron, and other materials, are as follows : For soft pine, a very pale tint of sienna; for hard pine, burnt sienna with a little carmine added; for oak, a mixture of burnt sienna and yellow ochre is used. Mahogany is represented by burnt sienna and a portion of dragon's blood. For walnut, dragon's blood and burnt umber are used. For bricks, burnt sienna and carmine make a good color. Gray stones are represented by a mixture of black and white, with a little of Prussian blue and carmine added—pale ink alone is sometimes used for stone work. Brown freestone is represented by burnt sienna, carmine, and ink. Wrought iron is represented by a light tint of Prussian blue, and cast iron by a gray tint composed of black, white, and a little indigo. Brass is tinted with gamboge. Gamboge, slightly mixed with vermilion, makes a good color for copper. Silver is represented by an almost invisible blue.

In this use of Indian ink, the best for tinting and shading is fine grained, and has a brownish tint, and when newly broken has a dull golden appearance at the fracture. It is generally scented with musk or camphor, and is sometimes covered with gold leaf, or is highly polished and covered with finely executed Indian or Chinese characters. Cheap inks are generally known by their dull surface and coarseness of grain. Inks and colors should be wetted as little as possible, otherwise they will crack and crumble away. Indian ink is improved very much by mixing in with it a very small portion of blue. This will give the lines a dark black appearance.

Bright clear lines are made by having the ink very dark.

Never intersect lines until the first lines drawn are dry.

Tapering lines are made by successive closings of the pen, or by a dexterity in adjusting its position to the paper and the pressure upon it.

"ON TIME."

As a general rule, the good hand is also the prompt and punctual hand, because he has an interest in his work and in the prosperity of the shop. But it sometimes happens that a really valuable hand will be just a little late with the most provoking regularity. If the doors are locked at two minutes past seven, the tardy man just gets in at the last instant, and it is five or eight minutes past before he puts away his lunch bucket and gets his overalls on and begins to do something. Five minutes is not very much, but if a hundred hands are each five minutes late in starting to work, it makes over eight hours lost time per day ; or if one man is regularly behind five minutes every day—and there are some good hands who are almost invariably five minutes late about starting, either in the morning or at noon—for a year, he loses over two days and a half time per annum. This two days and a half is just as much a loss to the employers as if the man had been out for two days and a half and had taken pay for it through a mistake of the time-taker.

It has often seemed strange to us that men who are perfectly reliable and conscientious in every other respect, and who would not take a cent if they did not think they had fairly earned it, should permit themselves to form a habit of being just a little behind time. A foreman dislikes to speak to a good hand in the way of fault-finding about anything. He is especially loath to go to a good hand just as he starts his work and tell him he is two, three or four minutes late. He knows the man will do more work in the day than the punctual, slow man who works next to him, and it doesn't seem quite the thing to be sharp under the circumstances. Still the foreman cannot help noticing the constant loss of time, and after a while he does speak, and then the valuable hand feels as if his good work was not appreciated. He perhaps says to himself that it isn't much use to try to get things along very fast since he is spoken to about such a trifling matter.

The unpunctual hand should remember that just because he is a good hand his example carries authority in the shop, and that while the employer might be glad to give him a direct favor, he still fears the effect of lax discipline, no matter how valuable the person may be whose constant fault is overlooked. The matter of being just a little behind is an easy one to correct. If a man chooses he can just as easily be five minutes or two minutes ahead of the whistle, and be in his place and ready to work when the time comes, as to be a little late. It is both for the interest and for the pleasure of every working mechanic to so conduct himself as to make his relations with his shop pleasant in every particular. About the only recompense there is for hard work and unremitting attention, is to be found in the consciousness of good work faithfully performed, and the least want of punctuality always gives a conscious failure in a part of the day's business. The foreman and employer both know the hand who is a little late, and whatever may be their opinion of his merits as a mechanic and his value to the shop, they cannot avoid wishing that he would correct his one fault, and become one of those who are usually on time.—*Metal Worker.*

CARE OF WOOD TYPE.

Too little attention, says the *Type World*, is paid by many to the care of type in general and of wood type especially. Wood type should always be kept in a cool and dry place. The drawer or shelves—drawers or cases are preferable to shelves—where they are kept should not, as very often happen, be made of unseasoned wood, for this reason : type wood is usually perfectly seasoned, and when allowed to remain for any length of time on a damp surface the moisture is absorbed, the bottom expands, and a warped type, ready to be broken at the first impression, is the result.

Wood type should only be washed with oil. A moistened cloth is sufficient, is more economical, and certainly is much cleaner than using their weight in oil. All our type have a smooth and polished face, and if properly cleaned when put away will last for years. In fact, proper use only improves the working qualities.

COPYING INK FROM EXTRACT OF LOGWOOD.—Hager proposes the following formula : 1,000 parts of the best solid extract of logwood are ground up, covered with 12,000 parts of cold water, and allowed to soak, with occasional stirring, till dissolved. To the liquid are then added 100 parts of glycerine, and afterwards 500 parts of good dextrine and 250 of sugar It is let settle for eight days, the clear is decanted off, the turbid residue is diluted with a little water and filtered. To the total clear liquid are added 80 parts acetate of manganese, and a solution of acetate of iron is gradually added. It is, however, advisable first to make a very small sample of the ink experimentally, both in order to determine the quantity of iron solution which will be needed and to test the extract of logwood, as not every extract makes a good ink. The trial sample must be observed for a week. —*Leipziger Faerber und Zeugdrucker Zeitung.*

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

ANNOUNCEMENT.

WE beg leave to announce the completion of our line of CHRISTMAS and NEW YEAR CARDS for the Season 1882-1883, for which our Agents will commence to solicit orders in May. We feel confident that the popularity which our Cards have enjoyed in former seasons will again be secured by the efforts we have made to bring out a line in advance of all our previous productions. The names of the Artists who have contributed designs is proof of our continued efforts to reach the highest excellence. We will name only the following:

MISS L. B. HUMPHREY,	MISS F. BRIDGES,	MISS DORA WHEELER,
MRS. O. E. WHITNEY,	MISS ROSINA EMMET,	MISS FLORENCE TABER,
MISS L. B. COMINS,	THOMAS MORAN,	FREDERICK DIELMAN,
ALFRED FREDERICKS,	ALEXANDER SANDIER,	HARRY BEARD,
WALTER SATTERLEE,	R. G. BIRCH,	F. SCHUYLER MATHEWS,
THEO. LIEBLER,	GEO. J. BARNES,	H. P. KENDALL.

Due regard has again been paid to the literary matter in connection with the designs, and many of the latter are accompanied by original poems, from writers of note, such as MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

Fringed Cards—All furnished with envelopes and protectors.
Envelopes—Furnished without extra charge for all cards for which the list price is $1.80 and over.
Backs have been specially designed for our cards, adding an attractive feature to them.

Bird Cards, by Miss F. Bridges, Mrs. O. E. Whitney and others
Figure Cards, by Miss L. B. Humphrey, Miss Rosina Emmet, Miss L. B. Comins, Alexander Sandier and others.
Flower Cards, by Mrs. O. E. Whitney and others.
Fan Cards, by Mrs. O. E. Whitney, in new styles.

PRANG'S PRIZE CHRISTMAS CARDS.

THIRD COMPETITION

FIRST.—Artists' and Popular Prize Card ($2,000), by Miss Dora Wheeler,
SECOND.—Artists' Prize Card ($500), by Miss L. B. Humphrey,
SECOND.—Popular Prize Card ($500), by Walter Satterlee,
THIRD.—Artists' Prize Card ($300), by Miss L. B. Humphrey,
THIRD.—Popular Prize Card ($300), by Frederick Dielman,
FOURTH.—Artists' Prize Card ($200), by Alfred Fredericks,
FOURTH.—Popular Prize Card ($200), by Miss Florence Taber.

All our Prize Cards, and many of the other Christmas and New Year Cards, can be had in heavy mounts, with gilt beveled edges.

SPECIAL NOTICE.—Importers and Jobbers would do well to inspect my Holiday Novelties, introducing Cards mounted in Plush, Marvelieux and Brocaded Satin.

THE BEST DIARY.

ECONOMICAL DAILY MEMORANDUM

·1883·

ANNOUNCEMENT.

WE present for approval the "Economical Daily Memorandum" in various sizes and styles, printed on good paper, strongly sewed and neatly bound, with leather backs and printed sides, also in full leather.

Besides a space for each day of the year it contains tables of the rates for foreign and domestic postage and money orders, valuable postal information, calendar and cash account for each month.

In addition to days of the week and month, the diary is numbered for the days of the year, a valuable improvement, useful for time calculations.

Dealers, whose trade does not warrant an investment of the considerable sum required to purchase an assortment of Diaries in the usual extended variety, will find a few dollars profitably spent in buying these goods, which come within the reach of all.

Dealers, already carrying a line of other Diaries, will find the "Economical" a valuable addition. Being made without flap or tuck they can be retailed at the price commonly charged for similar plain memorandum books, and therefore extend the sale to a different class of buyers.

We will be glad to furnish the trade samples at a reduced price. We solicit early correspondence in order that books may be received in time to make a selection and place an order for early fall trade.

Owing to the limited season during which Diaries are retailed, the demand must be anticipated by both jobbers and manufacturers.

Christmas and New Year Cards

FOR THE SEASON 1882-3.

GREAT REDUCTION IN PRICES.

Now ready, Pattern Books of the above Fine Art Publications containing a rich profusion of choice and elegant Patterns, Chromo-Lithographed in the highest style of Art, after original designs by eminent Artists. ☞*N. B.—Shown by leading Jobbers in the States.*

PROSPECTUS TO THE TRADE.

GENTLEMEN:

We have much pleasure in announcing that our Pattern Book of CHRISTMAS AND NEW YEAR CARDS for the approaching Season is now completed. It will be found to contain an exceptionally large and varied assortment of choice Patterns, in the preparation of which we have followed the same methods that have always enabled us to secure both originality in the Designs and also the most careful and artistic treatment in their reproduction. To insure variety and excellence in the Designs, we have always made a point of retaining the EXCLUSIVE services of Artists selected for their eminence in particular departments of Art, and year by year we add to their number the names of distinguished Artists who are willing thus to assist us. This plan seems to us a wiser one than that of bringing together for selection, under the inducement of a long array of prizes, a promiscuous assemblage of Designs, drawn from the most diverse sources, and many of them excessively ill-adapted for the purpose intended. That our productions should have attained the first rank in the estimation both of the Press and the Public, we accept as a full endorsement of the soundness of the course which we have so long pursued.

In the preparation of the new Pattern Book, we have spared neither pains nor expense to make it the most attractive that we have ever published. Both for novelty, originality, and the extent of the variety offered, the present book is of unsurpassed excellence. Not a single picture in the book has been previously shown; and in every grade, from the highest to the lowest, care has been taken to provide for all possible requirements.

Among the Series shown, we may be permitted to call attention to the following:—

EMBROIDERY SERIES.—These pictures, chromo-lithographed on the finest white Satin, continue to enjoy an increasing popularity for purposes of embellishment in all kinds of Art Needlework. To meet the prevalent taste, several Floral Designs have been introduced.

BOOK-MARKER SERIES.—The great favor with which this series was received last year has induced us to bring out one in a cheaper form (Series No. 563¼), of a suitable size for novels; whilst in Series No. 562¼ we give a highly-wrought religious subject in the same size as that of last year.

D'OYLEY SERIES.—These are entirely novel and original, and, from their utility as well as beauty, cannot fail to prove highly salable.

Owing to the favor accorded last year to our PLAIN-LINE MOUNTED SERIES with verses on the back, we have this year been induced to enamel and print an appropriate verse at the back of most of our cards of the better sort.

In conclusion, we desire to return our best thanks to our numerous friends in the United Kingdom, the United States, and many other parts of the world, for the appreciation with which they have rewarded our efforts to reach a high standard of perfection in our Fine Art Publications; and we can only assure them that the same endeavors on our part, which have been so successful in the past, will be continued with unabated energy in the future.

Our Price List, showing large reductions in price throughout, will be forwarded on application; and at the earliest possible opportunity our Pattern Book will be submitted to your inspection. Awaiting the favor of your commands,

We remain, yours faithfully,

BUNHILL ROW, LONDON, E. C.
May, 1882.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW PATENTS.

No. 259,778. Paper-Folding Machine.—John H. Stonemetz, Erie, Pa.

In a folding machine a drop-roller pivoted to the frame-work by arms which act as bearings for the roller, one of the arms being bent and pivoted to form a lever in combination with a feed-roller having cylindrical grooves in its surface and a rock shaft having gages attached thereto, a bent arm projecting from one end and in sliding contact with one of the journals of the drop-roller, which in dropping rocks the shaft and depresses the gauges into the cylindrical grooves in the feed-roller, and a spring attached to the frame-work for reversing the action of the drop-roller upon the rock-shaft when said drop-roller has been lifted.

No. 259,789. Tension Device for Unwinding Rolls of Paper.—Edwyn Anthony, Hereford, County of Hereford, England, assignor to R. Hoe & Co., New York, N. Y.

The combination with a shaft carrying a roll of paper and brake acting thereon, of a tension-roller connected to the brake lever and freely movable in a guiding slot, whereby variations in the tension of the paper cause movements of the tension roll, and the latter in turn acts upon the brakes.

No. 259,837. Book Support.—Myron W. Filley, Albert S. Teal, and Robert Fields, New Haven, Conn.

No. 259,838. Advertising Card.—Cornelius M. Finch, Jamesburg, N. J.

No. 259,866. Twine Holder.—Chas. W. Jones, Lowell, Mass.

No. 259,910. Perforating Device.—Edwin T. Pettit, Marshalltown, Iowa, assignor to himself and George E. Kester, same place.

No. 259,912. Engraving and Chasing Machine.—Ansel P. Phillips, Providence, R. I., assignor of one-half to Frederick I. Marcy, same place.

No. 259,915. Temporary Binder.—Arthur L. Pratt, Kalamazoo, Mich.

In a temporary binder, the combination of a removable cover, a series of independent packages composed of blank leaves and stubs, and index-leaves interposed between the packages, said packages having transverse lines of perforations separating the stubs from the other parts of the leaves, and the whole detachably secured together by a cord passing through holes in the cover, index leaves and stubs.

No. 259,920. Spelling Toy and Puzzle.—William H. Reiff, Philadelphia, Pa., assignor to Rogers, Peet & Co., New York, N. Y.

No. 259,950. Optical Toy.—Henry Van Hoevenbergh. Elizabeth, N. J.

No. 259,975. Copying Book.—Charles D. Campbell, Bellefontaine, Ohio.

A book having letter bill, or other paper for writing on, secured to one of the backs, while to one edge of the other back are fastened a number of sheets of tissue-paper arranged to fold singly or in a body over on the back and on another edge of the back a sheet of tin, wood or oiled board faced with an impression-pad arranged to fold over onto the back in such a manner that the copied tissue sheet may be folded under the board, while a blank sheet for copying on is folded over on the top of the impression-pad preparatory to being wetted and copied on.

No. 259,978. Folding Machine.—Luther C. Crowell, Brooklyn, assignor to R. Hoe & Co., New York.

No. 259,979. Delivery Apparatus for Web-Printing Machines.—Luther C. Crowell, Brooklyn, assignor to R. Hoe & Co., New York, N. Y.

No. 259,994. File-Holder.—Charles H. Babbitt, Council Bluffs, Iowa.

No. 260,068. Easel.—Agnes E. Van Kirk, New York, N. Y.

No. 260,083. Copying Press.—William Bowker, Somerville, Mass.

No. 260,084. Printer's Rule.—Joseph B. Boyd, Cincinnati, Ohio.

A printer's rule, having a narrow tongue, permanently bent, curved, or otherwise laterally deflected, sufficient space being allowed beneath the tongue to clear the quads.

No. 260,134. Fountain Pen-Holder.—Marvin C. Stone, Falls Church, Va.

1. The combination of a rigid or non-collapsible ink reservoir closed at the top, porous material in its lower end, the pen, and the feeding plate lying close to the surface of the pen and extending from the ink-supply downward to a suitable point to deliver ink to the point of the pen. 2. In a fountain-pen, the combination of the body wherein a column of ink is sustained mainly by atmospheric pressure, a writing-pen of ordinary form at the lower end of the body, one or more feeders with surfaces lying adjacent to the pen and extending from the ink-supply downward to the point of the pen, and an air-admission to the lower end of the reservoir, substantially as shown, whereby an automatic and constant feeding of the ink from the reservoir to the point of the pen is secured by capillary action. 3. A non-collapsible ink reservoir, open at the lower end only, in combination with the detachable holder provided with the porous material, the writing pen, and the capillary feed plate or plates. 4. In a fountain pen, the combination of a reservoir wherein the ink is sustained mainly by atmospheric pressure, a writing-pen, a feed-plate lying adjacent to the pen, with a thin passage between the two for the feed of the ink from the reservoir, and an air-admission at the foot of the reservoir distinct from the passage through which the ink descends to the pen.

No. 260,147. Printing Press.—George L. Adams, Fowlerville, Mich., assignor of one-half to John C. Ellsworth, same place.

In a printing press having a flat bed to be reciprocated by hand-power under an impression cylinder, the combination of the cylinder, journaled in movable bearings, with the pivoted hand-lever, connected with the bearings, and having its handle in proximity to the handle for reciprocating the bed, whereby the impression cylinder can be raised and lowered and the bed reciprocated by the operator, all without change in the latter's position.

No. 260,163. Measuring Tape.—William Chesterman, Sheffield, County of York, England. Patented in England February 11, 1880; No. 611.

A measuring tape consisting of a fabric wherein the warp-threads lie two or more together and the weft lies single alternately over and under the warp-threads, and the fabric graduated.

No. 260,167. Toy Merry-go-round.—Charles F. Cornelius, New York, N. Y.

No. 260,197. Adjustable Map and Chart Supporter.—Henry E. Hayes, Brooklyn, N. Y.

No. 260,230. Hammock and Tent Frame.—Geo. A. Parker, Marlborough, N. H.

The device forms a braced support for a hammock, and is convertible into a tent-frame.

No. 260,235. Photographic Camera.—H. Clay Price, Montclair, N. J., assignor to the Scoville Manufacturing Company, Waterbury, Conn.

No. 260,233. Rack Motion for Printing Presses.—Charles Potter, Jr., Plainfield, N. J.

No. 260,251. Dampening Bath for Press Copying.—Norman C. Stiles, Middletown, Conn.

No. 260,284. Toy Building-Blocks.—Jesse A. Crandall, Brooklyn, N. Y., assignor of one-half to Walter P. Denslow, same place.

No. 260,289. Toy Fire-Arm.—George W. Eddy, New Britain, Conn., assignor, by direct and mesne assignments, to Stephen S. Tallman, East Orange, and George D. Tallman, Long Branch, N. J.

A toy fire-arm, in which the barrel is provided at its rear end with a barrel-section containing a bore for the reception of the cartridge, and directly in front of the bore an obstruction to receive the charge, and one or more discharge-passages which are out of alignment with the bore.

DESIGNS.

No. 13,007. Ornamenting Paper for Coffee Packages. Owen A. Gill, Baltimore, Md., assignor to E. Levering & Co., same place. Term of patent 14 years.

No. 13,009. Wall-Paper.—Eduard Leissner, New York, N. Y. Term of patent, 3½ years.

No. 13,016. Toy Money Bank.—John H. Parmelee, Bridgeport, Conn. Term of patent, 3½ years.

TRADE-MARKS.

No. 9,484. Cigarette Paper.—Gaston D'Argy & Co., Paris, France.

A shield bearing a lion rampant.

No. 9,493. Mucilage and Writing Inks and Fluids.—William A. Davis, Boston, Mass.

The word "Treasury."

No. 9,495. Indelible Ink.—Adolf Kuttroff, New York, N. Y.

A star upon a globe or ball with rays emanating therefrom.

No. 9,497. Indelible Ink.—Frederic A. Whiting, Wellesley Hills, Mass.

The fac-simile of the registrant's signature and a pictorial representation of a little child sitting on a box and extending a pen, and a stork standing on the box near the child, the stork's right leg held above a jar of ink.

PRINTING INKS.

A Leipsic printer says the temperature of the press or machine room ought to be as near as possible the same as that at which the ink is manufactured (68° Fahr.). If the temperature of the room, and consequently of the iron receptacles the ink is kept in, be considerably less, the varnish of the ink will stiffen, the paper will adhere to the type and peel off, or if this does not occur, there will at least be too little varnish in the ink remaining on the types, and too much carbon, which of course, will not sufficiently adhere to the paper, and may be wiped off even when the print is perfectly dry. But if the temperature of the work-room be too high, the varnish becomes too thin, the ink loses its power of covering well all parts of the types, which then look as if they had been printed with lamp oil. Colors of different hues require generally a somewhat higher temperature than black, say 70° to 75° Fahr.

TO ELECTROTYPE HANDWRITING.

Coat a smooth surface of glass, or metal, with a smooth, thin layer of gelatine, and let it dry. Then write or draw upon it with an ink containing chrome-alum, expose it to the sunlight until dry, and immerse the plate in water. Those parts of the surface which have not been written upon will swell up and form a relief plate, while those parts which have been written upon with the chrome ink have became insoluble in water after exposure to light. The relief may be transferred to plaster of-paris, and from this may be made a plate in type metal.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Willy Wallach is busy receiving large quantities of stock.

Meni Marder, fancy goods dealer, Paterson, N. J., has sold out.

C. H. Webber, printer, Salem, Me., has sold out to C. D. Howard.

T. J. Foster, publisher of the *Journal*, Fort Wayne, Ind., is dead.

C. M. Kimbrough & Brother, booksellers and stationers, Portland, Ind., have sold out.

W. K. Shurtleff & Co, pulp manufacturers, Skowhegan, Me., have dissolved partnership.

Filter, Marvin & Ridgway, manufacturers of paper bags and paper dealers, Philadelphia, Pa., are asking an extension.

Etzel, Hutchinson & Co. have succeeded the firm of F. Etzel & Co., wholesale dealers in notions and fancy goods, St. Louis, Mo.

Stedman & Cartwright, dealers in rags and paper stock, Philadelphia, Pa, have dissolved partnership. Francis Cartwright withdrawing.

Howard Brothers & Read, importers of and commission dealers in notions, New York City, have dissolved partnership. Howard Brothers & Co. succeed.

Le Count Brothers, stationers, San Francisco, Cal., have leased a building of three floors and basement 32x155 feet on Market street, to which they will remove on September 1.

W. E. & I. N. Parrish, 44 Main street, Owensboro, Ky., want latest catalogues and price lists from booksellers, stationers, toy manufacturers, picture publishers and producers of novelties for the fall and Christmas trade.

Jacob Lang, Jr., stationer, printer, &c., Louisville, Ky., is no longer connected with the firm of Drew & Lang. He is located at 229 Jefferson street in that city, and asks the trade to send him price lists, circulars and catalogues.

Henry Bainbridge & Co., New York, offer first quality German slate pencils, No. 6, at 65 cents, and No. 7 at 75 cents per thousand for ten case lots; cash, 30 days. For case orders of twenty thousand their prices are 67½ and 78 cents. They also offer Clegg's rulers and Salter's letter balances at reduced prices.

Turner & Harrison, steel pen manufacturers, of Philadelphia, Pa., have added a large pen to their series of Russia Moheta pens which is very elegant in design and in its writing qualities. It is called "Giant Moheta," and is illustrated in their advertisement. This firm is also bringing out a new series of steel pens, called the "Constitution" series, made expressly for the jobbers, and which will comprise the popular styles and also popular prices.

Attention is called to the advertisement of E. B. Stocking, attorney-at-law and solicitor of patents, Washington, D. C. Mr. Stocking was for several years a member of the examining corps of the United States Patent Office, and examined applications in the classes of paper manufacturers, box, envelope and bag machines, printing presses, feeding, folding and delivering mechanisms, bookbinding and all articles of stationery, and is thoroughly posted in the paper arts.

A game of base ball was played at the Union Grounds, Brooklyn, on July 4, between the Eberhard Faber nine, of this city, and the J. B. Lippincott & Co.'s nine, of Philadelphia, resulting in favor of the former. The score was follows:

Innings	1	2	3	4	5	6	7	8	9	
Faber	4	0	0	0	1	1	3	8	0	—17
Lippincott & Co	1	0	0	1	1	0	0	0	1	— 4

As the Philadelphians were the guests of their opponents, the latter treated them "right royally." They met them at the Desbrosses street ferry with a four-horse team and conducted them to the grounds. After the game they went to Coney Island and had dinner at the Grand Central Hotel at that place. When dinner was over the members of both nines had their photographs taken together, and then visited several places of interest on the island. At six o'clock the merry party returned by boat to this city. After the Quaker City boys had shown their appreciation of the treatment they received from their Gotham friends they started for home, pleased with their day's enjoyment.

The novelties shown for the coming season by Loeb & Brother are among the most elegant ever produced in the fancy leather goods trade. They excel in beauty of design and workmanship any similar imported articles, and it would be to the advantage of parties interested to call and see these goods before placing their orders.

Henry Levy & Son have begun to open their fall trade goods, most of which will be described in future issues of THE STATIONER. The firm's "Parker" school-bag is still meeting with a great demand.

J. H. Bufford's Sons are having a great sale for their advertising fans and hotel ménu cards. This firm has just brought out two new series of cards, one illustrating beach and the other plantation scenes.

Ralph Trautmann is doing an immense business in advertising fans. Mr. Trautmann furnishes these goods to jobbers at rates which yield handsome profits.

E. H. Purdy, with Obpacher Brothers, has returned from a short trip to the East in the interest of the house, and reports having met with much success.

Obpacher Brothers' line of satin bannerets, intended for the Christmas trade, is one of the most elegant ever offered. The trade should see it.

The interest of W. B. Walker in the firm of Maurice I. Lobe & Co., wholesale stationers and paper dealers, Baltimore, Md., has ceased.

Townsend & Frazier, publishers of the *Register*, Lafayette, Oregon, have dissolved partnership. W. M. Townsend continues.

Youse & Cohen, paper box manufacturers, Baltimore, Md., have dissolved partnership. Each continues alone.

George C. Eaton & Co., booksellers & stationers, Longmont, Col., have dissolved partnership. M. J. Carr retiring.

Russell, Morgan & Co., Cincinnati, have issued a new price list for their new United States playing cards.

J. I. Davidson, bookseller and stationer, Peterboro, Ont., has sold out to O. A. Davis & Co.

S. N. Crissy, bookseller and stationer, Galesburg, Mich., has sold out to Brown Brothers.

John S. Wheeler, stationer, San Francisco, Cal., has applied for relief in insolvency.

A. J. Jones, publisher of the *Index*, Sonoma, Cal., has sold out to M. Burris.

J. L. Pfleuger, dealer in notions, Bloomfield Ill., has sold out.

D. Taylor, stationer, &c., Ferndale, Cal., has sold out to W. T. Boustell.

Charles G. Soderberg returned home this week from a very successful trip for Ph. Hake.

W. R. Utley, of Eaton, Lyon & Co., Grand Rapids, Mich., arrived in town yesterday morning.

T. D. McCormack, of T. H. Payne & Co., Chattanooga, Tenn., is expected in the city this week on a visit for health and pleasure.

J. H. Van Kirk has left Henry Lindenmeyer to engage in the paper commission business on his own account, and is located at 51 John street.

Pulsifer, Jordan & Wilson, paper dealers, Boston, Mass., had their stock injured $5,000 by a fire which broke out yesterday morning. Their insurance amounts to $79,000.

Daniel Slote & Co. have just issued their new revised price list embracing a complete schedule of their manufactures. This new price list is intended to accompany the descriptive catalogue of July, 1881.

Hastings, Todd & Co., agents for Pottsdamer & Co., Philadelphia, are out with a new line of folding cards for advertising, orders of dance, ménus, &c. The set comprises four folding cards, illustrating the popular song, "Over the Garden Wall."

The *Sentinel-Review*, Woodstock, Ont., speaking of the "Oxford" book-store of that town, speaks in high terms of W. G. Boyes, the present proprietor. The store has been improved in many respects and it contains an excellent stock of books, stationery, fancy goods, &c.

Francis Wood, of the Esterbrook Steel Pen Company, will leave the city next week with his family for a few weeks' recreation at Nantucket, Mass., after which he will dilate as usual in various parts of the country on the excellent qualities of the Esterbrook pen.

An arbitration is to be had to decide a difference between a lithographing house and a customer on a job of work consisting of about 100,000 advertising cards. The question involved is whether a steam-press edition should be as perfect as the color proof from a hand-press.

The demand for fans for advertising purposes this season has lessened the sale of low-priced imported fans about one-third. Hastings, Todd & Co., of this city, say that they have supplied card stock, furnished handles and put them on, packed and shipped for the trade about two million this season.

Boorum & Pease have brought out for the holiday trade some very unique novelties in the line of leather goods, embracing combination jewel boxes, ladies' work-boxes, game boxes, toilet sets and several new and elegant designs in photograph and autograph albums, as well as some new styles of scrap books.

Among the visiting members of the trade in the city during the past week were: D. W. Glass, of D. W. Glass & Co., Baltimore, Md.; Wm. R. Utley, of Eaton, Lyon & Co., Grand Rapids, Mich.; H. S. Crocker, of H. S. Crocker & Co., San Francisco, Cal.; M. W. Wolf, of M. W. Wolf & Co., Baltimore, Md.; W. F. Brittingham, of the Galveston (Texas) *Daily News*.

The New York Silicate Book Slate Company have recently brought out something new in the line of family blackboards. The "Daisy" is a small-sized board especially adapted for the use of small children. The "Holly" is of the same style as the "Daisy," only larger. The marking

surface of these boards is covered with their black diamond slating.

T. R. Marvin & Co., printers, Boston, Mass., were burned out on Wednesday; loss, $10,000.

Frederick Eels, bookbinder, Boston, Mass., lost by fire on Wednesday to the extent of $5,000.

Goodwillie, Wyman & Co., dealers in printers' supplies, Boston, Mass., were burned out yesterday morning. Loss, $5,000.

FRUIT FORMS IN DECORATION.

Not only flowers and horticultural forms generally afford excellent materials for the carver's chisel, but fruit is another section of nature that can also be turned to most profitable account. To trace the various applications of it for decorative purposes since the history of ornament began would, observes the *Builder and Wood Worker*, prove a most pleasant task to the student. When once leaves and flowers were brought within the range of decorative art, fruit was ere long added to the list and used prolifically. The Greeks paved the way by their charming application of the acanthus, honeysuckle, laurel, myrtle and berry, and when the Grecian style blossomed into the florid Roman, we find fruit among its sensuous arabesques, and tied to the horns of its altars. The goddess Flora was a poetical invention of these times, and her relative, grape-bedizened Bacchus, is familiar to all. Even the capitals of Gothic columns are frequently found made up of flowers or fruit, giving an endless variety, at the same time conforming to the tone of beauty. The free treatment allowed by the Renaissance gave carvers unlimited opportunity to introduce anything they pleased, and fruit came in for a large share of favor. In the colored arabesques of the Italian school the most luscious effects are obtained by the incorporation of autumn's harvest, and the later styles of the French Renaissance would be lost but for the ribbons, fruit and flowers which are so freely "thrown about." On some of the old Jacobean furniture of our own country various fruits, especially grapes, have been conventionalized with happy results, and a century later we find the fruit swag of the Queen Anne epoch to be the leading article. Speaking of this period, the name of Grinlin Gibbons at once rises to the lips of the intelligent carver, and brings us to the point that we wish to chat over with our readers. Gibbons is to some the *beau ideal* of a fruit sculptor, and they stand in raptured astonishment gazing at his work. To depreciate the splendid talents of this carver may be hypocritical, and yet we shall earnestly warn our carver against getting into the same "rut" with him. Apart from the objection that Gibbons belonged to the natural school, there is a repetition and mannerism in his cutting that is objectionable. It is, in fact, neither natural nor conventional. Many of his flowers and much of his fruit cannot be found in nature. They are a smooth, flat species of his own growing, and the plea of conventionality cannot be urged, for his work was intended to be essentially natural. Admitting all this, Gibbons may well be honored as a bygone carver of singular vigor and rare individuality in his particular style. Nevertheless, to those who would copy "Gibbons" in his entirety, we say "don't," and for this reason: the man who will place an apple on his bench and reproduce it exactly in wood, is painstaking and clever, but the one who studies its form, and makes the fruit and leaves into a design that will cover a panel or form a conventional swag, is the more to be commended. The amount of skilled labor wasted in minute reproductions of "still-life" subjects is much to be regretted. When some of the wood exhibited "is out of the carver's own head," it is far more agreeable to contemplate. By all means master the lines of the fruit to be utilized, and then turn the materials thus acquired into something you can call your own design. It is in this sense that the work of Gibbons fails to teach us anything; there is an amount of arrangement, but scarcely any design. Given a tenpenny nail, a bit of ribbon, and some half-dozen kinds of nondescript fruit, and you have the great Queen Anne carver's stock-in-trade as regards that section of his craft.

POLISHING SHELLS.

Spon gives the following facts respecting the methods employed for polishing shells: 1. Marine shells are cleaned by rubbing with a rag dipped in ordinary hydrochloric acid till the outer dull skin is removed, washing in warm water, drying in hot sawdust, and polishing with chamois leather. Those shells which have no natural polished surface may either be varnished or rubbed with a little tripoli powder and turpentine on wash-leather, then fine tripoli alone, and lastly with a little fine olive oil, bringing up the surface with chamois as before. 2. The shells are first boiled in a strong solution of potash, then ground on wheels, sometimes through one stratum, to show an underlying one, then polished with hydrochloric acid and putty powder. In this operation the hands are in great danger. Shell grinders are generally almost cripples in their hands. 3. Polishing mother-of-pearl: Go over it with pumice-stone finely powdered (washed to separate the impurities and dirt) with which polish it very smooth; then apply putty powder and water by a rubber, which will produce a fine gloss and good color.

SILVERING GLASS GLOBES.—To half an ounce of lead add half an ounce of fine tin, and melt them together in an iron ladle; when in a state of fusion add half an ounce of bismuth, skim off the dross, remove the ladle from the fire, and before it solidifies add five ounces of quicksilver, and stir the whole well together, being careful not to breathe over it, as the fumes of the quicksilver are very injurious. The operation should be performed under a hood communicating with a chimney of good draft, to carry off the vapors. Or, to four ounces of quicksilver put as much tinfoil as will become barely fluid when mixed. Have the globe clean, dry and warm, and inject the metal by means of a clean glass or earthen pipe at the aperture, turning it about until it is silvered all over, let the remainder run out, and the operation is finished.

A correspondent of the *Typologie Tucker* recommends a plan which is in use in some printing offices, of cleaning forms by a jet of steam, instead of with lye, to which he considers it preferable. Steam, he says, has the advantage of rapidly boiling the oil of the ink, which condenses it, gets rid of all dirt, and leaves the type perfectly clean. Types cleansed by this means always look new, and the oxidation produced by potash, which is so injurious to the skin, is avoided. Let the form be subject to the jet of steam for two minutes. The heat will dry the types instantaneously, and much facilitate distribution. As no brushes and potash are required, the expense of fixing up the piping is very soon saved.

FOLEY'S PAT. IMPROVED STYLOGRAPHIC PEN.

Great reduction in price: No. 1, $1.75; No. 2, $2.50; No. 3, $2.50; No. 4, $3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, JULY 6, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

WE print the call for the annual meeting of the American Paper Makers' Association. In view of the fact that the Tariff Commission will begin its sittings this week, and that many questions of interest to the paper trade are likely to arise, the annual meeting ought to be well attended, and due consideration should be given to the discussion of all suggestions relating to the tariff.

BIBLIOMANIACS have now another turn given to their researches. Heretofore it has been conceded that the first book printed in Switzerland was issued at Munster (Canton Lucerne) in 1470; but, according to a contemporary, this claim has been upset by the discovery, in the French National Library, at Paris, of a work printed at Basle in 1467. This book is said to be a translation of the "Book of Job," by Pope Gregory I., and was in 1468 the property of Joseph de Vergers, a priest of the Church of St. Hilarius at Mayence, who had inscribed his name and the date (1468) on the inside of the cover. Prior to this the earliest printed book credited to Basle was 1474, when the "Sachsenspiegel" was published in that city. The work mentioned, if authentic, is probably a translation of a volume of the "Moralia," which consisted of thirty-five books, written by Gregory I., and was an exposition of the Book of Job. Gregory I. was called the "Great," and held the pontificate from 590 to 604. It is not stated in what language the translation of 1467 is made, but it may be reasonably supposed that the translation was not made by Gregory. As a matter of interest to bibliopolists, further information would be desirable. The only edition of Gregory's "Moralia" printed at Basle that we have yet seen authority for is dated 1551.

As was to be expected, nearly every newspaper which gives an opinion on the proposed reduction of postage, favors the free transmission of newspapers through the mails, but devotes little space to the more important proposition of cheaper letter postage. This is altogether selfish and ill befits those who claim to think and speak for the people. The newspapers would do better to defer their demands for free postage until the lowest rate possible for correspondence is attained. As another needed reform in our postal service we advocate the abolition of the postal card and of the circular rates. All written or printed communications between individuals should be carried for one cent the half ounce. It is probable that the revenue can as easily be secured for one cent as for two cents. The cheaper the rate the larger will be the volume of correspondence, and every method should be employed to enlarge and facilitate this source of revenue. The postal card, in itself, is a nuisance. It only answers for the briefest messages, and even then is quite too often inadequate for the purpose. Other objections to it are generally well enough known and do not need to be stated here. The stationery and paper trade are interested in these suggestions and ought to try and urge them. As for revenue, the government will make more money with a one-cent letter postage than with the millions of postal cards which it is obliged to supply, and industrial interests will be at the same time benefited. This is something that the Paper Makers' Association can take hold of, and it will not be amiss for the Stationers' Board of Trade, if it entertains like opinions, to officially call the attention of the American Paper Makers' Association to it and invite its concurrent action. What do the President and Trustees of the Board of Trade think about it?

ANSWERS TO CORRESPONDENTS.

S. (Boston) excepts to the statement made in THE STATIONER of June 22 that a certain firm could make 100,000 impressions per day from steel dies, and that there must be some mistake.

Ans.—Our correspondent is, doubtless, well informed on the subjects of die-sinking and embossing, but we think that he has read the item rather hurriedly. The paragraph says that "the *presses* which are employed have a capacity of 100,000 impressions per day, and print from steel dies." This does not mean one press or each press, but the presses collectively. Our correspondent will certainly see that it is possible to have enough presses to do the work.

H. asks who gets up assorted sizes of envelopes (all sizes, large folio to small) for Christmas cards.

Ans.—Samuel Raynor & Co., New York, make a specialty of keeping such goods in stock. They have ten different sizes.

C. asked in THE STATIONER, June 22, for name and address of the manufacturer of the "Royal Ink Extractor."

Ans.—A correspondent at Yarmouth, Nova Scotia, whom we thank for the information, says that it is made by Leonard & Russell, Strand, London, England, and can be bought at wholesale of James Campbell & Son, 33 St. Bride street, Ludgate Circus, London, England.

CHATTEL MORTGAGES.

[In the appended list R. signifies a renewal of a pre-existing mortgage; B. S., bill of sale; and Real, a mortgage on real estate.]

Mortgagor. WESTERN STATES.	*Amount.*

John J. Daly, St. Louis, Mo	7,500
Carl G. Jahn, Cincinnati, Ohio (R.)	2,077

AMERICAN PAPER MANUFACTURERS' ASSOCIATION.

The annual meeting of the American Paper Manufacturers' Association will be held at the Grand Union Hotel, Saratoga Springs, N. Y., on Wednesday, July 26, prox., at 11 o'clock, A. M. Manufacturers of all kinds of paper are invited to attend and become members of the association. The matter of being represented before the Tariff Commission and other subjects of importance to the trade will come before the meeting, and a large attendance is desired.

Per order of the Executive Committee.

C. O. CHAPIN, Secretary.

SPRINGFIELD, Mass., June 20, 1882.

The stationery, book and paper trade firms of Philadelphia closed their places of business from Saturday until Wednesday.

Communications.

[Correspondents are requested to write on only one side of their paper. No responsibility for the opinions of correspondents attaches to this paper.]

A Disclaimer Wanted.

To the Editor of the Stationer:

I notice in your issue of a fortnight back a statement to the effect that I had purchased the stock and business of the Artistic Papeterie and Complimentary Card Company, 80 Nassau street in this city. I do not know by whose authority you inserted it, and have to request that in your next issue you will give a distinct disclaimer to having done so. ERNEST W. ROLLS.

NOTE.—Mr. Rolls asks too much. The report of the purchase was made, as he states, and it is impossible to disclaim "having done so." We presume that Mr. Rolls intends to assert that he has not concluded the purchase referred to, but he does *not* say that he did not contract to buy out the business referred to and afterward recede from his contract.—[ED.

Not Dull.

ST. LOUIS, June 27, 1882.

To the Editor of The Stationer:

We see that your St. Louis correspondent reports our business, in your issue of June 22, as "dull." This is indeed news to us; and, as it is not in accordance with the facts, we object to being misrepresented in such a conspicuous manner.

Our business is not now, nor has it been, "dull;" but, on the contrary, it has never been so good. We are obliged to refuse many orders, as it is simply impossible to execute them without interfering with work already contracted for. And while we are putting in additional presses, we find it extremely difficult to increase our force of artists, transferers and pressmen with the high grade of skilled labor our specialty of chromo and color lithography requires, and I would say, that positions for such men are always open in our establishment.

We would suggest that it would be well for your "Regular Correspondent" to practise the wisdom of her *nom de plume*, and not "jump like a cat at conclusions." If she will visit our place—and we extend a cordial invitation through you for her to do so—we will soon convince her that we are not "dull," nor even "quiet," but an extremely lively and noisy institution.

With best wishes for continued prosperity to THE STATIONER, very truly yours, &c.,

RICH. J. COMPTON,
President Compton Lithograph Company.

SAFETY PAPER FOR CHECKS.

To prevent alterations in writing, the following process of preparing paper has been recommended by N. J. Heckmann, in *Dingl. Journal.* Add to the sizing 5 per cent. of cyanide of potassium and sulphide of antimony, and run the sized paper through a thin solution of sulphate of manganese or copper. Any writing on this paper with ink made from nutgalls and sulphate of iron can neither be removed with acids nor erased mechanically. Any acid will change immediately the writing from black to blue or red. Any alkali will change the paper to brown. Any erasure will remove the layer of color and the white ground of the paper will be exposed, since the color of the size is only fixed to the outside of the paper without penetrating it.

NEW "SHORT-PAID" POSTAL REGULATION.

The new and important rule for "short-paid" mail matter runs as follows:

"Whenever any short-paid matter (being otherwise mailable) is deposited at a free-delivery office, and consigned to any address within the United States, it shall be the duty of the postmaster to send an official postal card to the addressee, notifying him of its detention, and that it is necessary for him to remit the amount of postage due thereon before the same can be forwarded to destination. This provision applies only to matter which does not bear the card or address of the sender. Such card matter should be returned immediately to the party mailing it, as prescribed by existing regulations."

Postmaster Pearson has stated that the effect of this regulation would be to expedite the delivery of underpaid letters. The new law does not affect letters prepaid one full rate of three cents; such letters will be forwarded as heretofore, and the rest of the postage collected from the person receiving the letter. It affects chiefly letters upon which three cents or more should be paid, but which have only a two-cent stamp affixed. Heretofore such letters have been sent to the Dead-Letter Office, and if they have been thought by the Post Office authorities to be of sufficient value to warrant the trouble, a card of notification has been sent to the person to whom they were addressed. All this required more time than the present plan, by which the work of disposing of underpaid letters is imposed upon the office at which such letters are posted.

FIRE IN A PAPER MILL—LOSS OF LIFE.

The Victoria Paper Mill, owned by George W. Hoffman, and situated at Oregon, about four miles back of Peekskill, Westchester County, was discovered to be on fire at about 3:30 o'clock on Tuesday morning, and in a very short time was in a mass of smoldering ruins. Three men who were asleep in the building were burned to death. Their names were Theodore Gardner, aged 22; Frank Lamoree, aged 19, and Albert Hadden, aged 19. The latter had been the night watchman of the mill for three years, and Mr. Hoffman had so much confidence in him that he did not carry any insurance on his property. The fire was discovered by Frederick Wright, the machine tender, who was at the mill until 9 o'clock on Monday evening, when he left Charles Haight, who was to remain in charge until 12 o'clock. Mr. Wright lives near the mill, and when he saw the flames he hurried to the spot and attempted to open the door, but the dense smoke and heat drove him back. He heard groans from the inside and supposed Hadden was in the mill alone. Mr. Wright could not tell how the building got on fire. Gardner and Lamoree were seen about Peekskill on the previous afternoon in an intoxicated condition and with a bottle of liquor in their possession. It is supposed they went out to the mill, and with Hadden had a carouse which resulted in their setting fire to some of the paper. The bodies of the three men were found near the centre of the building, burned to a crisp and unrecognizable. Gardner's identity was established by means of his shirt buttons. The mill was situated on the boundary line between Westchester and Putnam counties. The line ran almost through the centre of the building. The body of one of the men was discovered on the Westchester side of the line, one-half of another was in Putnam County and the other half in Westchester, while about two-thirds of the body of the last man were in Westchester. Coroner Stevens, of Putnam County, and Coroner Hyatt of Westchester, arrived on the ground simultaneously. Each claimed jurisdiction, but neither could prove his claim. Finally, after wrangling some time, Coroner Stevens, with the assistance of those he had brought with him, took up the charred remains of two bodies, placed them in boxes, and carrying them to a store near-by, held an inquest over them. Meanwhile, Coroner Hyatt had sent to a Peekskill undertaker for three coffins, and while Coroner Stevens was holding the inquest in the store, Coroner Hyatt repaired to a neighboring shop, and, having sworn a jury, commenced holding an inquest himself. As fast as Coroner Stevens' witnesses were discharged they were taken before Coroner Hyatt, and retold their stories. After all the evidence had been taken, Coroner Hyatt's jury rendered a verdict that the three men had come to their death from suffocation in the Victoria mills on the morning of July 4, 1882. When the three coffins arrived the Putnam County Coroner took one of them, the Westchester Coroner took the second, and the uncle of Gardner took the third, when the necessary arrangements were made for their interment. The loss to Mr. Hoffman from the fire is about $6,000. He is uninsured.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, July 5, 1882.

THE MONEY MARKET.—The money market remains easy, especially in view of the large disbursements that have been made and will continue for several days on account of July dividends and interest on the national debt, so that not only is a large volume of ready money seeking investment, but the money market is likely to be well supplied for some time to come with funds necessary to move the crops that are beginning to be harvested. The stock market has been dull and uninteresting, with only slight fluctuations in the prices of the leading stocks. Sterling exchange has ruled heavy. A moderate demand prevailed for sight bills, owing to 1st of July settlements, but the inquiry for other bills was very light.

THE PAPER MARKET.—The city dealers in paper, or that large intermediate class between the manufacturers and consumers, and who handle the bulk of the production, generally report no improvement in business during the past week, the movement of goods not extending beyond summer proportions. Some manufacturers are disposed to name very low figures, in order to give full employment to their mills through the season. There is complaint of low water at mills situated on some of the small streams, but this has not been a very great drawback as yet. The greatest panacea for the present depression in prices is for manufacturers to make less paper for the remainder of the summer, and make a better quality, and in the fall reap the reward which such providence promises.

THE STATIONERY MARKET.—Business has been of a very limited character since our last, caused chiefly by the recurrence of the national holiday, and the general desire of out-of-town buyers to celebrate the day at their homes. As a consequence there have been exceedingly few non-resident buyers here this week. Reports of the prospects for the fall trade in almost every section of the country are of an encouraging character, based on the favorable crop outlook. The strike of the freight handlers shows no signs of abatement and has been an additional drawback to the trade here in almost placing an embargo on the shipment of goods, and deterring buyers from ordering pending the uncertainty of transportation facilities. There would undoubtedly be quite an impetus given to business during the coming fortnight only for this strike which, it is estimated, is a loss to the business interests of this city of about $150,000 per day. No changes have been reported in the line of staple goods, which remain on a generally firm and steady basis.

BLACK BOARDS.

Silicate Black Diamond Slating,

STILL ANOTHER IMPROVEMENT IN

ROLLER BACKING MACHINES.

(PATENT PENDING.)

By the use of our new Improved Roller Backer you can back a LARGE or SMALL quantity of books, of different sizes, as the Roller is adjusted by turning the handle on right, which runs the steel-cut beveled gears, and carries the Roller up or down very rapid and true every time, for any thickness of books, the first time, thereby saving great time and labor. There is no strain on the thread that carries the Roller. This is the only Roller Backer made which can be adjusted for a few books without a great deal of time and trouble.

This machine is built in a very superior manner, with steel connections, and the holes are reamed out; steel jaws, and made extra heavy for hard work. It has a triple spring for rest on back, to prevent the jar of the whole body in running the Roller clear back. This machine is pronounced, where in use, to be the strongest and quickest adjusted machine ever made. Can be adjusted from a 4-inch book to a ¼-inch book instantly, ready to make a TRUE BACK without loss of time, and the workman cannot but make a true back on every book.

Length of Jaw, 18 inches. Price, $325.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

THE GREAT ERIE RAILWAY,

LANDSCAPE ROUTE

OF AMERICA.

E. S. BOWEN, General Supt., New York.

JNO N. ABBOTT, Gen. Passenger Agt., New York.

STENCIL DECORATION.

In ordinary stencil decoration the pattern is generally rubbed on in one tone of color, and the arrangement of the design is, as a rule, a mere reproduction of parts prolonged indefinitely, according to the amount of space to be covered. In a screen by Mr. Howe, instead of a plain flat treatment of the stencil pattern, he has produced, by cleverness of handling and artistic touch, a varied tone in the different leaves and fruit forming the pattern, either by working the stencil brush very slightly over a portion of the leaf, and increasing the strength of touch and amount of color in the lower portion—by which a pleasant gradation of color is carried out—or by the use of two or more colors in the same leaf or flower, carefully blended at the moment, and worked off into delicately-shadowed surfaces, by which an extremely good effect is obtained. The general decorative effect is still, as it should be in this kind of work, quite flat and simple; but infinitely greater artistic character is given to the work by the skill and feeling shown in the manipulation of the brush, and in the interchange of one or two colors, to say nothing of a fairly artistic rendering and decorative treatment of the design itself, by interchanging the stencil plates and avoiding, as far as possible, any formal repetition.

Wood-worms can be destroyed in books and wood-work by benzine. Books are locked up in a cupboard with a saucer of benzine. The insects, as well as their larvæ and eggs, soon die off. Furniture and carvings are similarly placed in a room with a dish of benzine, and kept closed up for several weeks; the time required for the complete destruction of the insects varying according to thickness of the wood. New woodwork can be protected against their entry by a coating of glue, as living on vegetable substances they do not touch animal products.

THE UNDERSIGNED WISHES AN ENGAGEment with a First-class Book and Stationery House, Fancy Goods or Toys, either on the road, or will take management of either branch, in which he has had fifteen years' experience. Address R. A. GRIFFITH, Stationer, Des Moines, Iowa.

Blackhall's Patent Improved Machinery For the Manufacturing Stationery Trade.

BLACKHALL'S ECLIPSE POWER PERFORATING MACHINE

Is now in use in most of the leading manufacturing houses in the trade. Its great rapidity for straight or stub work can be judged from the fact that a ream of medium, with one to five lines of perforation, can be finished in from five to seven minutes. It makes a clean, round hole, and will cut from the toughest tissue manilla to heavy card-board. I have just added a device whereby crooked paper or irregularly printed or lithographed sheets can be perforated true and even.

WHAT THE TRADE SAY.

THE LATEST.—LEVISON & BLYTHE STATIONERY Co., St. Louis.—In reply to yours of 8th instant we would say that we have had your Power Perforator in constant use for the past two years on all classes of work. We have had no trouble with the machine during this time, and have had to replace but three pins. To-day it is in perfect order, cutting clean and even.

ST. LOUIS, May 26, 1882.

E. W. BLACKHALL: *Dear Sir*—We have had in use one of your Power Perforating Machines (for about one year), and we have to say it exceeds our expectations, does splendid work, does it rapidly, is easily attended by a small boy, is **durable**, and in fact we could not keep house without it. We cheerfully recommend it to all requiring a first-class machine. Truly yours, GEO. D. BAINARD & Co.

COURIER JOURNAL, Louisville, Ky.—We would not do without it if we had to pay double the price we paid you.

BARNES, BANCROFT & Co., San Francisco.—Your Perforator gives every satisfaction.

BOORUM & PEASE, New York. — Our perforated work costs almost nothing when considered by the ream. We are well pleased with it.

BLACKHALL'S DOUBLE STRIKER COMBINATION.

This simple arrangement will do **twice** the work of an ordinary striker, and for **one-head** or stock work, it will lap the head and run the down lines as fast as faint, without striking. It will also work from one to five patterns at once, by hand or power. Send for Circulars, &c.

BLACKHALL'S RULING ATTACHMENT.

Can be applied to any sort of striker, and will give twice the usual results for same labor, saving from fifty to seventy-five per cent.

OPINIONS.

HUGH R. HILDRETH PRINTING Co., St. Louis, on Hickok's Striker.—It has saved us time and money; we have every reason to be satisfied.

BEATTY & STEVENSON, New York, on Gouptill's Striker.—Easily adjusted, perfect accuracy, indispensable; send us another.

BROWN BROTHERS, Toronto, Canada, on Hickok's Striker.—One machine, with attachment, does work of two without it.

GEO. D. BARNARD, St. Louis, on Collins' Striker.—It does all you claim; it effects a saving of one hundred per cent.

The foregoing are a few of many letters of similar import. I would also call attention to my SLIDING PEN LIFTER, GUIDE PIECE, DROP SCREW SELF-FEEDER, NEW STYLE RULING MACHINE, &c., &c. ☞ Send for Circulars, containing full details and illustrations, to

EDWARD W. BLACKHALL, 83 Wood Street, TORONTO, or 11 West Swan Street, BUFFALO, N. Y.

USE OF SHARK SKINS.

The skins of certain sharks are used in jewelry for sleeve-buttons and the like, and when dried and cured take a polish almost equal to that of stone, and greatly resemble the fossil coral *porites*. The vertebræ of the shark are always in demand for canes. The opening filled with marrow during life is now fitted with a steel or iron rod. The side openings are filled with mother-of-pearl, and when polished the cane is decidedly ornamental. In India, in 1880, $300,000 worth of shark fins were shipped to China for food. In the islands of the Pacific the fish is in great demand for its teeth, which are manufactured into weapons of various kinds, ranging from spears to swords and daggers. The teeth are all serrated or saw-edged, and make terrible wounds. The base of the tooth is bored with some small instrument, and forty to fifty of them are tied or lashed to a hardwood sword, forming the edge. The hilt is also protected by cross-pieces armed in the same way. So effective are these weapons that the natives of these islands wear an armor made of rope especially to protect themselves from the shark's teeth.—*Sea World.*

HOW MOSAICS ARE MADE.

The London *Telegraph* has the following: The guardian in the velvet skull cap came to my aid, when I was at fault, with most courteous explanations. He mentioned incidentally that in a portrait of Pope Pius V. there were 1,700,000 pieces, each no larger than a grain of millet; but this statement I take to have been merely guess-work. The enamel, he proceeded to tell me, is a kind of glass colored with metallic oxides, and it is so fusible that it can be drawn out into threads, small rods, or oblong sticks of varying degrees of fineness, slightly resembling the type used by compositors. These polychromatic rods are kept in drawers properly numbered, so that the artist always knows to which case to repair when he requires a fresh supply of a particular tint or tints. When the picture is commenced, the first step is to place on the easel a slab of marble, copper or slate, of the size fixed upon, and this slab is hollowed out to a depth of about three and a half inches, leaving a flat border all round which will be on a level with the completed mosaic. The excavated slab is intersected by transverse grooves or channels, so as to hold more tenaciously the cement in which the mounts of enamel will be imbedded. Then the hollow slab is filled with "gesso," or plaster-of-paris, on which the proposed design is accurately traced in outline, and usually in pen and ink.

The artist then proceeds to scoop out a small portion of the plaster with a little sharp tool. He fills up the cavity thus made with wet cement or "mastic," and into this mastic he successively thrusts the "spiculæ" or the "tesseræ," as the case may be, according to the pattern at his side. In the broad folds of drapery, or in the even shadows of a background, or a clear sky, his morsels of enamel may be as large as one of a pair of dice; in the details of lips, or eyes, or hair, or foliage, or flowers, the bits of glass may be no larger than pins' heads. The cement, or mastic, is made, so far as I could gather from my informant, of slacked lime, finely powdered Tiburtine marble and linseed oil, and when thoroughly dry is as hard as flint. Sometimes the mastic which fills the cavity is smoothed and painted in fresco with an exact replica of the pattern, and into this the bits of glass are driven, according to tint, by means of a small wooden mallet. If the effect produced wounds the artist's eye, he can easily amend the defect by withdrawing the offending pieces of enamel and driving in another while the cement is still wet; and by observing proper precautions it can be kept damp for more than a fortnight. When the work is completed any tiny crevices which may remain are carefully plugged or "stopped" with pounded marble, or with enamel mixed with wax, and the entire surface of the picture is then ground down to a perfect plane, and finally polished with putty and oil. Byzantine may be broadly distinguished from Roman mosaic by the circumstance of the surface of the former being left unground and unpolished—save where there is burnished gold—thus leaving an irregularity of surface productive of great vigor of effect. A vitreous picture of the Byzantine style can at once be recognized as a mosaic, even if hung at an altitude of one hundred feet from the ground; but a perfected mosaic picture, after the Roman manner, might easily be mistaken, even at a very short distance, for a very elaborately finished and highly varnished painting in oils.

A NEW VARIETY OF GLASS.

The *Wiener Gewerbe-Zeitung* states that a chemist of Vienna has invented a new kind of glass which contains no silex, potash, soda, lime, nor borax. In appearance it is equal to the common crystal, but more brilliant; it is perfectly transparent, white and clear, and can be cut and polished. It is completely insoluble in water and is not attacked by fluoric acid, but it can be corroded by hydrochloric and nitric acid. When in a state of fusion it adheres to iron, bronze and zinc.—*Gaceta Industrial.*

Christmas and New Year, Wedding and Birthday

SOUVENIRS.

An ENTIRE LINE OF NOVELTIES in the above will shortly be ready. Prices ranging from 5s. to £5 5s. each, retail.

CHRISTMAS SOUVENIRS.—"Messrs. John Walker & Co. have struck out for themselves a new line in Christmas Cards, radically different from anything yet shown. We are forced to allude to the goods as "Christmas Cards," but they bear about the same relation to cards as a gold watch does to a German-silver toothpick. The souvenirs are beautiful miniatures on ivory, single, or in sets of two, three or four, enclosed in sumptuous cases of satin, velvet or morocco, a little in the nature of photograph albums, but very little like anything that has ever before been offered to the trade. Prices are from five shillings to five guineas. The oft-repeated question, "What shall I do with it?" will never be asked by the fortunate receivers of these souvenirs. They are of substantial size, great richness, and obvious worth as productions of art. Retail stationers who have or can make a market for these superb goods will have the satisfaction of knowing that the most severely critical of their customers can have no fault to find, and that they are offering something which will do credit to their own good taste."—*Stationery Trades Journal.*

THE MYSTERIES OF METALS.

Notwithstanding the wonderful progress that has been made during the last half century in regard to the constitution and working of the useful metals, there is yet a vast deal to be learned. The metals when pure are commonly supposed to be simple elements, yet there are some reasons for supposing that it may yet be proven that at least some of them are compounds. Even the great Faraday gave utterance to the thought that the dreams of the alchemists might yet be realized—that gold and other metals might be found to be compounds, and that means might be devised whereby those compounds might be separated, and afterward so differently reunited that the baser metals might be converted into precious.

The changes which are wrought in iron and steel by converting, annealing and hardening processes are far from being understood by the most advanced metallurgists of the present day. The mysteries of hydrogen gas and its intimate relations with iron are as much a puzzle as they were fifty years ago, and the theory advanced by Graham that hydrogen itself is a metal is still maintained by many chemists.

It is only a few years since that absolutely pure iron became known to scientists ; and it is now shown to be a metal almost as "unstable as water," and still found in the laboratory as a great curiosity. What had previously been known as pure iron was shown by Jacobi to be a compound of iron and hydrogen. He first separated the two so-called elements. During the process the iron increased in volume, changed from a dark to a silver white substance, very ductile, and so soft as to be nearly as readily cut as lead. The experiment proved that hydrogen played an important part in hardening and tempering steel—as much so as carbon—but how or why none know to this day.

It is found that much more difficulty is found in rolling, and otherwise manipulating, gold in a factory where much electricity is generated by the action of the machinery than in a room where no machinery is in operation, and where, consequently, frictional electricity is absent. This trouble is manifested in a disposition of the edges of the plates of thin bars to crack.

Many other peculiarities, already known, might be mentioned, and there is no doubt that closer observation will still largely increase the number of curious and as yet inexplicable phenomena connected with the working and general characteristics of the metals, both useful and precious.—*Mining and Scientific Press.*

PLUSH PANELS.

Place the material carefully over the wood panel with an edge formed of embroidered tissue. Black wood panels showing lovely painted designs are preferred by some. This mode abounds with odd fancies—animals, reptiles and all sorts of bugs are selected to be printed on door panels.

In Pompeii, recently, a very beautiful fountain was found among the ruins. It is said to surpass in beauty any of the fountains hitherto dug up there. Venus is represented as rising on a shell, with Cupid in her arms. Other spirits of love are seen here and there in the waves, while in the background appears Narcis, or water nymph, near a dolphin, with her arm thrown around the neck of a cupid. In the foreground, on the shore, are two draped women looking at the group in the water.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot. Each sheet is water-marked with name and date.

Correspondence.

BALTIMORE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BALTIMORE, Md., July 11, 1882.

A lengthy visit which your correspondent was forced to pay to a distant city was the only cause that deprived your thousands of readers of the luxury of perusing the "Baltimore Notes" in the late issues of the STATIONER. But let that pass; it won't occur again, for of all things disagreeable it is the thought that the pleasure of one individual should occasion grief in the hearts of hosts of intellectual periodical-perusing people. To get down to business, however.

Trade in the stationery line, as in that of most enterprises, during the past month has been decidedly dull. The majority of the houses have just finished taking stock and are now calmly resting on their oars, waiting for better times.

John B. Piet Company has been awarded the stationery contract for the Baltimore Board of Education for one year from July 1. The book contract for the same was secured by W. J. C. Dulaney & Co., and the Baltimore County Board of Education kindly awarded the contract of both books and stationery to J. H. Medairy & Co.

H. W. Schweckendiek & Co. have removed to 288 West Baltimore street.

A visit to M. W. Wolf & Co. developed the fact that their business is quiet, but that they are very hopeful of a good fall trade.

The business with the wholesale paper trade is slow, but travelers are about to start out for fall orders and expect to reap a rich harvest.

W. E. C. Harrison, the Baltimore News Company and Cushings & Bailey have no fault to find with the present state of affairs, but, like the others in the trade, they are eagerly looking for the good time coming.

The printing business has been better than has been known for years past, all the book and job offices having all they can to do.

W. J. C. Dulaney & Co., contractors for the work, have just completed the printing of 100,000 names of registered voters of Baltimore, one half in English and the other half in German. Messrs. Dulaney & Co. had by law only five days to do the work after the offices of the registers closed, and it required a force of fifty men, working day and night. The whole work had to be electrotyped. The lists have been posted for examination.

Guiteau's execution (to which, by the way, your correspondent, who formerly lived in the District, was accidentally summoned as a juror and actually did attend, though not in that capacity,) created a boom that newspaper proprietors will not soon forget. From morning until night edition after edition found ready sales, and the newsboys were also happy.

With the thermometers in the nineties, I find it hard to give you more at present, but hope soon to send you a longer and more interesting addition to my "Notes." W. P. M.

BOSTON BITS.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., July 11, 1882.

In the midst of midsummer heat and dullness, one can hardly be expected to write news when there is no news. Trade among the stationers has finally settled down into positive dullness, and everybody but those belonging to the can't-get-away club have started on their "vacation," whatever that may mean. Some people call it "vexation," but my own experience has taught me that a brief abstinence from the round of daily duty renders work tolerable, especially at this season of the year.

The early closing among the trade, during July and August, serves to emphasize the dullness.

At a meeting of the Newsdealers and Stationers' Union, on Saturday last, the following-named officers were elected: President, Thomas Marsh; vice president, J. F. Hunt; secretary, F. F. Allen; assistant secretary, L. W. Binby; treasurer, C. W. Drake; directors, J. Osgood, W. F. Woodman, R. C. Barker, J. J. Daly. The chief object of the association is to protect the newsdealers and stationers from the impositions of unreliable parties.

The jobbers report a comfortably limited trade—just about enough to keep things moving and prevent the accumulation of dust on the goods.

Several lines of novelties in stationery goods have been shown by traveling salesmen. Next fall will show a splendid assortment of goods in this line. The only trouble in this respect may be in overdoing the thing.

The hot weather has brought hither and to the near-by coast quite a number of dealers from the West and South, but they are buying few goods. They come with their families, not for business, but for pleasure. Boston is not so much of a market for Western buyers as it was five years ago.

The *World*, a cent paper, has disappeared. It was too good to last long.

The *Advertiser's* new marble front, seven-story building on Washington street is beginning to rise. Its front will be all window.

Reported that the two-cent *Herald* will be published as a seven-column folio after the 1st of September next.

The book publishers report very few new books in press for autumn presentation. Only one book in one hundred sells well as a popular work. So said a leading publisher the other day.

Crowds of citizens are off for Europe, but the names of no journalists appear among them. Stationers are a good deal like newspaper men in this respect. L.

PHILADELPHIA FILTERINGS.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA OFFICE OF THE LOCKWOOD PRESS,
150 South Fourth Street.
PHILADELPHIA, July 11, 1882.

The spring season in Pennsylvania, which opened pretty dull, although much inferior to that of the winter, has been better than was expected. Staple articles have met with good sale, although other lines of goods have suffered more or less. The uncertainties of the harvest, and the apprehension that we might be in danger of another financial crisis, have occasioned a falling off in business, which nevertheless will have had its compensation in giving the retail trade to work off their stocks. The fact is, that now there is reason to look for an excellent fall and winter trade.

The preparations being made for the next season by the wholesale dealers and the manufacturers are quite ample, and exceed those of preceding years.

A. M. Collins & Son have already a number of important orders which seem to indicate that cards and card boards will be in greater demand than ever.

The amount of goods ordered by J. B. Lippincott & Co. is really enormous. They have added many new lines to those formerly kept, and I believe that dealers will find it to their advantage to inspect their new stock while it is fresh and complete. In addition to their regular sources of supply in Paris, Vienna and Berlin, they have had a special buyer visiting the various manufacturing centres of Europe where they have purchased a great variety of staple goods and novelties, the like of which it will be hard to duplicate. In July J. B. Lippincott & Co. will issue a catalogue of school stationery in addition to their regular monthly bulletin, which will be found very convenient for those desiring this class of goods.

The same firm has lately greatly extended its manufacture of blank books and blank stock generally, for which it has a very large demand. In Christmas, New Year and birthday cards this house can show the best and latest products

from over fifteen different manufactories. Among the new lines just added to its already immense stock are complete assortments of hair, cloth and tooth brushes, perfumery and toilet soaps; also toilet sets in cases, including celluloid, Florence and Ansonia Manufacturing Company's goods.

Wolf Brothers have lately greatly extended their trade. They have just added to their envelope factory a blank-book bindery, and they can now offer drawing books, manilla order books and canvas covered books at lower prices than other manufacturers.

In letter-copying books William Mann maintains his reputation; he sees his business increasing every day and shares with W. T. Murphy's Sons the supply of banks and large corporations in Pennsylvania with blank books and articles of stationery which they use.

Nagle & Co., whose business lies exclusively with the trade, report an exceptionally great demand from the West, where this firm has a great many customers.

To give a correct idea of the condition of business in Pennsylvania, a few minutes spent at the Thomas W. Price Company's place will suffice. This firm deals with so many different trades and in so many articles of its own manufacture, that in observing the activity which prevails at its store no one can doubt that we are entering upon an excellent season. At no time has its sales of printers' supplies and advertising specialties been better or more active.

Louis Dreka has never done so much business as during the past season. He has already ordered the grater part of his goods for the next winter, and will have the handsomest stock that has yet been seen in this city. His reputation for the finest and most tasty engraving extends all over the country, and this branch of his trade has also largely increased.

There are in Philadelphia many manufacturers of inks and mucilage who are now very busy. Among the last the Continental Manufacturing Company holds one of the first positions. This concern, which, since it has been removed to Market street, has considerably increased its capacity, is one of the best organized that we have, and its products have an excellent and well-deserved reputation. I could also say as much for Ewing & Co., who are not so well known to consumers, inasmuch as they work exclusively for a certain number of the more important wholesale stationery dealers.

Turner & Harrison are preparing a new line of steel pens, called "Constitution" series, which consist of ten of the most popular pens in the market. They are beautifully put up, and the price will be made so low as to insure them large sales. Wholesale dealers will do well to get samples and prices for their fall trade.

The lithographers who make a specialty of the manufacture of chromo cards, have learned that the best means for maintaining the favor which these goods have enjoyed for a number of years is to improve them artistically and in the choice of subjects. They have also found out that there have arisen notable changes in these features. The productions of Potsdamer & Co., who are never behind in this respect, are this year altogether remarkable. The five sets (five designs in each set) in black etched folding cards, which will be ready about August 15, are irreproachable in taste. For the fall season they have in preparation seven new sets, of four designs each, of chromo cards, which will certainly meet with ready sale. Among these last cards, "Over the Garden Wall," will be one of the successes of the season. Hastings, Todd & Co., 117 William street, New York, sell all of the goods of Potsdamer & Co., and have always a complete stock on hand.

T. M. Simpson already have nearly all of their Christmas and New Year cards. Many of these are charming.

Rosenbaum & Co. are preparing a line of Christmas satin sachet cards, which are very elegant and are offered very low. This firm has also a handsome stock of frames of all kinds.

Charles P. Bartleson has all of his samples ready. His advertising cards are selected with much taste, and among them will be found some little *chef d'œuvres*. I have remarked, among others, a chromo representing a gilt palette ornamented with flowers, which is one of the prettiest things of the kind.

Charles Beck does not intend to be eclipsed. His American and imported cards make a splendid assortment, which is too large to be described here, and it comprises everything from the cheapest to the most expensive.

On leaving Philadelphia, Marcus Ward left James D. Sloan to represent him in Pennsylvania, giving him facilities for the sale of all of the articles which can be found at the house in New York, and at the same price as there. Mr. Sloan, who has also a fine selection of De La Rue's handsomest cards, is now in the West, where he is traveling in the interest of Marcus Ward.

Janentzky & Co. are kept constantly busy with the sale of artists' materials, for which the season has lasted longer than usual. The mirrors for decorating and the papier maché placques are in very great demand.

The manufacture of leather goods, represented at Philadelphia by three important firms, has of late years taken an important position. An idea of the growth of this business can be gained from the statement of the fact that the sales of Langfeld, Turner & Andrews during the first six months of this year have been equal to all they effected in 1880. Their new style of pocket-books and bags, with coin drawer, has had all of the success that you predicted, and is in such demand that the firm cannot manufacture fast enough to fill the orders which they receive.

Wm. A Haines, who makes a specialty of fine goods, has found his business increasing to such an extent that he has been compelled to build a new factory adjoining his old one, so as to be able to meet the wants of his trade. He has just completed a new five-story building, No. 121 North Eighth street, the first and second floors of which are to be used as salesrooms; the third, fourth and fifth floors for manufacturing. This is, in addition to buildings the firm had previously occupied, which will also contain the factory and storerooms. This will give this house the most complete organization for the manufacture of leather goods.

A. J. Holman & Co. will add to their already large assortment of family, pulpit and reference bibles, quite a number of new lines, which will be offered for the first time this fall. Their enlarged facilities for manufacturing have enabled them to devote more than ordinary attention to the manufacturing of photograph albums, which they will offer for the fall and holiday trade, in almost endless variety of styles and bindings, embracing Turkey morocco, sealskin, Russia, plush, etc. Jobbers will do well to examine their lines of goods before purchasing, as they are the best selections that they have ever offered to the trade, and at prices competing with those of foreign manufacture.

J. L. Shoemaker & Co., manufacturers and dealers in bookbinders' stock, report business excellent, each month this year showing better results than the corresponding period of 1881. Their factory, lately removed to this city, is kept busy turning out colored skivers and fine linings for the bag and pocket-book trade. The sales of their justly celebrated "Ledger" brand of American russia have been very large and are constantly increasing. J. VIENNOT.

ST. LOUIS SAMPLES.

[FROM OUR REGULAR CORRESPONDENT.]

ST. LOUIS, July 8, 1882.

Please send me a check for $200. The fine sorrel pacer which you gave me when I first came out here is dead—it "died and left no sign." His decease came about in this wise. There is a place here, on Third street, between Vine and Locust, much dreaded by all safe stationers. The street is very bad, and all who know its depths avoid it. There was a bottom once, although sometimes the mud was deep; but now the bottom is gone—no footing whatever, no established way. As I was riding along this street, my horse stumbled and fell; he sank deep down in the mud. With difficulty I myself escaped, reaching the curbstone on the opposite side of the street. I turned to see my horse, but could not even see where he went down.

What a loss! Why do they not make the streets safe? Surely there ought to be some better way in which the well-meaning stationer could pursue his business, and I will learn by this sad experience not to go more in such dangerous ways. "Alas, poor brute, I liked thee much;"—chiefly because he saved my weary feet. Will any other ever fill its place, please send me the $200 and I will see what I can do. I intended to give you a report on a glue factory in East St. Louis (of vital interest in this business, is a glue factory!—offensive but necessary), but not having a horse I will defer until my next.

In a recent conversation on the very small profits in the school-book trade, occasioned by publishers dealing direct with school boards and cutting out all stationers' profit, it was remarked that some manufacturers of articles of more general use, such as copying books of special make and a certain letter file, had adopted a similar policy of dealing direct with the consumer. It may have the advantage of a larger profit to make up for the disadvantage of not having their goods kept on sale, thereby losing the service of the stationer. The older manufacturers have probably found that a fair division of profit with the trade insures their favor and makes them valuable servants to increase the sale and establish the demand for their goods. It would be well if there was concerted action among stationers, as in other trades, to oblige manufacturers who desired to sell consumers direct to preserve the stationer's profit.

Speaking of rights, "Minerva" was asked: "How far does the right of the inventor extend?" Is he not indebted to the public for the progress of thought that at length enables him to invent, and ought he to expect his invention to cover processes and arts that the gradual increase of knowledge was sure to bring, and ought he not to be satisfied with his own part or step in the progress? For instance, would it be right for a Gutenberg or Faust to expect a royalty on all printing because he arranged the first types and rough bits of wood? Had no one gone farther in the invention and improvement, what comparatively small advantage would the world have derived? Or ought Howe to expect a royalty on all sewing machines because he mounted the first needle on wheels? Was the first grant of a patent enough without the successive renewals? In the invention of the flat file for letters and papers, ought the inventor to

be disappointed if he derives full benefit for his own first form of filing, but none from other applications of the same idea? "Minerva" has no conclusive answer, but seeks to know. The Patent Office and "right" is established to give the public valuable processes and inventions that they otherwise would not have. It is also to encourage men to perfect and put on the market improved processes and articles of manufacture. It is not to keep from the public what belongs to it from gradual improvement. It is not to take processes already known and make them of less use to the public because of increased cost. So "Minerva" thinks.

The lazy current of the stream of business that has been running so slowly here of late, simply because there was so little water in it, has quickened perceptibly—more in it to flow makes faster current and wider stream. Big craft (even overloaded ones) sail easily along, and little boats can make quick time by keeping with the tide.

Some of our enterprising houses here are laying plans to sell, not only the New Mexico, Colorado, and Texas consumers, but even to the fast growing cities of old Mexico. It is bound to come to us if we go for it, and we will go. Don't forget to send the check for $200.

MINERVA.

LOUISVILLE LOOSE ENDS.

[FROM OUR REGULAR CORRESPONDENT.]

LOUISVILLE, Ky., July 8, 1882.

Business matters are tame and inactive, and all branches of trade seem to be in the midst of a lull so quiet as to indicate that a period of remarkable buoyancy is near at hand, that is, if a lull always precedes a boom. The "honest granger" is now looming up conspicuously, for it is admitted on every hand that the next season's business depends almost entirely on the result of his labors. Crop reports are being carefully watched, and up to this date the outlook in this section is the brightest that the agricultural interests have known for many years. Hence there are excellent reasons for expecting a healthy fall trade.

The old house of Terrell, Dietz & Co., manufacturing stationers, has dissolved, Mr. Terrell selling his interest to the remaining partners, who continue as George H. Dietz & Co.

Dreier & Lang, booksellers and stationers, have dissolved partnership. Edward Dreier continues alone.

The publishing firm of C. C. Cline & Co. has been strengthened by the admission of M. H. Webb and Charles Francis.

Lindsey & Brother, dealers in artists' materials, have dissolved partnership. Thomas N. Lindsey succeeds, retaining the old style.

Johnson & Straeffer, dealers in novelties and subscription goods, have separated, and each continues alone.

Gen. Abe Buford, whose lecture on the "Relations of the Church to the Turf" has attracted wide comment, has issued a prospectus for a new monthly magazine to be styled "Turf, Rod and Gun." The General is an old breeder and turfman, has recently joined the church, and is said to hold the opinion that racing is not immoral even for church members, and further, finds paragraphs in the scripture to prove that there will be horse races in heaven. May his publication have a good run and hold out well.

John B. Gaines' daily paper, the *World*, having burned up, he gathered the fragments together and soon issued the *New World*, which, however, has gone to meet the old.

Hill, Fletcher & Co., wholesale dealers in notions, are about to remove to 607 West Main street, where they have one of the finest storerooms for their line of business in this section.

W. Scott Glore, who has been long and favorably known in the stationery trade, informs me that he intends to retire from the business, and is now ready to receive bids for his stock and fixtures.

Thomas Royall, bookseller, is in liquidation under his assignee, Chas. Goldshaw. His liabilities are not heavy, and assets sufficient to pay out.

Lanphear & Co., stencil cutters and printers, have been sued by A. T. Mercer, whom they bought out, to foreclose a chattel mortgage of $5,400, which he holds for the balance of the purchase money.

Among the recent visitors from "the North" were Geo. Freeman, of the American Lead Pencil Company; Henry Reed, of George Routledge & Sons; Mr. Phillips, of B. Illfelder & Co., and Arthur Lyman, of Lyman & Curtiss.

BOURBON.

CHICAGO CHAT.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS,
8 Lakeside Building,
CHICAGO, July 8, 1882.

"Dog-days" are very close at hand, yet we wear our overcoats, and feel quite comfortable beside a blazing stove! The days are long past when

> Spring her rosy garlands strews,
> Close in the path of winter's icy car.

But "Winter's icy car" seems to have stuck in the mud somewhere between Chicago and St. Louis, and, per consequence, spring is compelled to wear more modest garments than she is wont, and has to spend a great deal of her spare time in hunting the garlands which she should be strewing.

About the only department in which the influence of winter does not seem to linger is that of trade. Summer may tarry on the way, but summer dullness will, in its appointed season, overtake the reluctant merchant.

Usually the overworked dealer does not regret the summer quiet, which allows him to slip away from stock and books for a week or two, to the resorts of fish or fashion; but this year it is too cold for any but the most enthusiastic to go a-fishing, and the "butterflies of fashion" are late in coming out—as a sort of compromise, the trade sits at home and grumbles its discontent into the ears of the unhappy correspondent. "Bad news is worse than no news," so I shall say nothing more regarding either the present state of the weather or the trade.

On Wednesday next (12th) the Northwestern Booksellers and Stationers' Association will meet for a second time in convention at the Grand Pacific Hotel. In view of this meeting, it might be well to take a retrospective glance, and see what has been accomplished by the association in the interval. At the former meeting the purposes and intentions of the organization were boldly signified in the following language, regarding juvenile and miscellaneous books:

Resolved, That in the opinion of this Convention, it is for the interests of publishers that their books be supplied to the public through local booksellers, and that a book store should be maintained in every community; that to secure this we recommend:

1st. That publishers place a reasonable retail price on their books, and adhere strictly to that price in all sales except to the legitimate booksellers; that they may make a discount to the retailer sufficient to afford him a reasonable compensation; and such an additional discount to jobbers as will warrant their carrying a large stock for distribution.

2d. That publishers and booksellers add postage to the retail price on all books sent by mail, and that they print the amount of postage required on each book in connection with its retail price.

3d. The publishers and jobbers discontinue discounts to booksellers who retail at less than publishers' prices.

Regarding school text-books:

Whereas, The interests of the publishers of school text-books are largely identified with those of booksellers, therefore

Resolved, That we request the publishers of school text-books to make only net list prices, from which no discounts shall be made to others than legitimate booksellers, and that in all cases where the books are sold or supplied, except for the purpose of examination, to other than booksellers, an addition of 15 per cent. to said net list shall be made, to cover expense for postage.

The following resolutions were also adopted:

Whereas, The practice on the part of many manufacturers and jobbers of stationery, of selling their goods indiscriminately and without uniformity as to price and terms, works great injury to the trade;

Whereas, The practice of cutting the prices in many staple goods to a point below which any dealer doing a legitimate business can afford to sell;

Resolved, That we, the booksellers and stationers of the Northwest, commend the practice of some of the leading manufacturers, in selling their goods in such a manner as to protect the dealers and assure a legitimate profit. And we urgently request all manufacturers of staple goods to adopt such a plan—and we assure all that do it our hearty co-operation.

The language of all these preambles and resolutions is clear and concise, and they have been read East, West, North and South, wherever THE STATIONER circulates; but what good results have been effected by the association, so forcible in language, but (though galling, it must be admitted) so weak in action? Certainly, the collapse of Alden is not to be attributed to the efforts of the association, and outside of that there has been scarcely anything which might be considered fortunate for the dealer. Month after month the reader has met in these columns the complaints of your correspondents against "cutting" of prices, "debauching" goods from their proper spheres, and other illegitimate tricks of trade, of which almost any reader might find abundant illustrations "in his own country and among his own kindred." Your St. Louis correspondent gave a single pertinent instance when he illustrated the methods used by certain manufacturers to "introduce" their inks. Examples might be multiplied, but to what result? At the risk of speaking impertinently, I venture to predict that neither association, preambles nor resolutions will effect the slightest reform so long as individual selfishness is dominant in the heart of man over individual integrity of purpose and honesty of action; so long as the desire to make money overshadows the desire for mutual welfare, that long wholesaler will make differential discounts, and retailers will advertise catch-custom "job lots" and "bankrupt stock."

To the trade everywhere, without meaning it personally, might be quoted the old text, "Make clean your hearts within," for that is the basis, and the only sound basis, of mutual confidence and personal "squareness" (I like the Western term, it means so much,) of character. Nevertheless, success to the Northwestern Booksellers' and Stationers' Association!

One other comment, by way of postscript, and I have done with the association for the present. Does it not seem that the importance of the objects desired to be attained by the convention, should be sufficient to call every man to his post, without this bait, which is appended to the official call: "In addition to the important

business which will come before the association for action, we expect to have a good time."

That signifies a banquet, and if the trade do not feel sufficiently the importance of the occasion, the fame of last year's collation—which was "immense"—ought to bring them all in.

E. P. Donnell & Co., are certainly to be numbered among the "faithful" to the AMERICAN STATIONER. They assert that they never placed such a paying advertisement as the one in these columns. Of course, the superiority of their machinery has also a great deal to do with their success, for a poor article ("barring" nostrums), though heralded by an archangel's trumpet, will not sell among the Yankees. The secret seems to have been struck the other day by J. S. McDonald, who remarked in conversation, "Everything made by Donnell is a little ahead of and an improvement on anything else of the kind." Since January 1 this house has furnished thirty-one complete bindery outfits ; and quite recently the following sales have been made: F. Collins, Boston, blank book sawing machine ; W. Walter & Son, New York city, sawing machine ; Government bindery, sawing machine and a blank book back-making machine; J. S. McDonald & Co., Chicago, sawing machine; Cameron, Amberg & Co., Chicago, sawing machine ; Brown, Pettibone & Kelly, Chicago. sawing machine ; D. & C. H. Rankin, San Francisco, sawing machine.

These saw machines have already become famous among blank-book makers and edition binders ; and now a novelty is again offered in the shape of a cheap perforator for printers and stationers, which will perforate on any sized sheet of paper. The perforation can be made any depth in the sheet, and the holes are round, clean and equal to those made by the most expensive perforators. It is made for either hand or foot power.

I. N. Humphreys, Toledo, Ohio, has been selling quietly, for some years past, a most useful "Consolidated Sales Record." It is arranged so as to compare at a glance the sales of each day, week, month and year, for a period covering nine years. The back contains also a comparative record of total sales, purchases and collections, monthly and yearly, for the same period. It is claimed by those who have used it to be as valuable as the ledger in a counting room, and is quite available in cases where all sales are cash and no other books are kept. It has been sold to some of the largest houses in the country, and is in almost universal use in Toledo. Mr. Humphrey is secretary and treasurer of the Gendron Iron Wheel Company.

Tuerk Bros. & Johnston have just shipped a large No. 12 motor to E. R. Waddill & Brother, Danville, Va. Their Australian agency has been recently changed. It is now in the hands of McLain Bros. & Rigg, 69 Elizabeth street, Melbourne.

Rose, Hodge & Co., printers' machinery and supplies, have just removed from their old quarters on Monroe street to a more commodious situation at 196 and 198 Washington street.

H. C. McAllister & Co. seem to be not only the largest but the most enterprising fancy card dealers in the West. They have recently bought out the entire stocks of Creswell, Warner & Co., and the Cobb Library. They carry a fine line of Eastern and foreign goods, and are constantly bringing out new designs of their own. The latest are 1033, a new edition of pretty kitten palette cards ; 748, Children's Sports, in gold and colors ; 1430, Arctic Series ; 1431, Colored Camp-Meeting, comic series, and 1433, sea-side cards, five amusing designs. Their large flower palettes, in two designs, are very handsome. They are one-eighth of an inch thick and are intended for ornamentation.

Mr. Sullivan, lately traveling for Geo. B. King, who has sold out and retired, will travel for this house. He will carry a very fine and varied line of American, French and other cards. His sample-books would be a bonanza for the æsthetic card collector.

On Saturday, June 24, Snider & Hoole's baseball nine played a close game against the Charles Stewart Paper Company's nine in Cincinnati. The score stands 6 to 5 in favor of the Snider & Hoole boys. The Walnut street Champions expect next to "go through" the J. R. Mills & Co.'s nine. "Where are the nines ?"

Snider & Hoole certainly ought to be able to meet any taste or purse on paper cutters. On a large poster sheet just received there are illustrated thirteen different sizes and styles of cutters, varying in price from $125 to $1,900. The list includes all sizes and designs of the best makers.

The Chicago, Burlington and Quincy Railroad has just opened to the public its long-expected Denver extension. The initial train started from Chicago and Denver last Saturday, loaded with through passengers, and they have been running full ever since. Evidently the company knew what was wanted. A new outfit of chair cars has been put upon all the through trains of each division of this road. They are very tasteful, convenient and comfortable, and are free to through passengers.

Private information has been received from reliable sources to the effect that the Mound City Bag and Printing Company, of St. Louis, Mo., which suspended on June 17, makes the following exhibit of assets and liabilities : Assets, $15,657.65; secured, $17,945.67; liabilities, $28,-958.32. A proposition has been made to the creditors of the concern to compound by paying 35 cents on the dollar, in six, twelve, eighteen, twenty-four and thirty months. This proposition has not met with general favor among the Western creditors of the house, and the matter is still in dispute. G. B. H.

DAYTON DASHES.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, O., July 10, 1882.

Favorable weather during the latter half of June and the first part of July has put a better face on trade, and I never knew it better in July than now. Every one is getting out for fall orders, and is meeting with good success. Messrs. Myers and Benson, representing R. A. Rogers & Co., report their orders for the first week of their trip about double those of last season. G. W. Holden gives the same report for his salesmen.

Better goods are being asked for. In the album trade a large number are being sold by persistent canvassers on the subscription plan, to the detriment of the regular trade. In a small town of 5,000 population over one thousand dollars' worth of albums have been sold on this plan. I don't know that they are sold any cheaper than would be asked by a live book store—but who can resist the plausible tongue of the book agent ?

I met R. V. Dicks, with Reynolds & Reynolds, who had just returned from a ten weeks' trip through Pennsylvania and New York. He reports a good trade and the best of prospects for the future.

The sections of country dependent on the coal and iron interest are exceptions to the above general report, but the differences between the workmen and employers would seem to be in a fair way for settlement.

The freight blockade in your city is an annoyance and loss to us as well as to you. A good deal of trade is being picked up by rival cities—notably, Philadelphia, Baltimore and Boston. These cities rather enjoy your trouble.

Among our local paper mills there is not much doing, and prices are weak. In spite of this fact, new mills are being built, and the output will be largely increased. It will be mighty hard work to maintain prices in the face of this fact. The unhappy mills are trying to effect this by shutting down part of the time, but it don't do any good—there are too many mills and that is the whole trouble. They had better wait until the country gets a good deal bigger before any more are built.

The envelope men have gone and done it again; after deluding every one with the idea that the Standard Envelope Company was a fixed fact, they have reduced prices about 20 cents per thousand. They are getting themselves into mighty bad odor with the trade—at least throughout the MIAMI VALLEY.

CINCINNATI CIPHERINGS.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, July 10, 1882.

Things are looking up. Prices of papers, of course, are lower than they were this time last year. They let down so gently that nobody knew how the thing was done till 'twas done. "Yes, it's a little off, that's a fact—a little off in prices, but not enough to make a break." That is the way one here in Cincinnati would hear a dealer put the case when asked the state of the paper market any time within the past nine months. It is a Cincinnati art—one of her fine arts—this getting the market down a cent or two in the course of time without even making a break in the prices. We shall hear a different song this fall when the boom comes and prices go up, as they probably will, if the corn crop turns out good—and the chances are that it will turn out immense, in spite of the croakers who are interested in "bearing" the crop prospect to "bull" the prices of futures.

But business is a great deal better in volume and briskness than is customary here at this time of the year. This is especially true in the stationery line. The effect of the wheat crops on business is already beginning to be felt. Six weeks more of favorable weather will assure the corn crop. Every day of good weather now is worth millions to business. When the corn crop is fully assured all of the wheels will begin to turn. Yes, let that crop be fully assured, as it may be in six weeks, and you may all look for an early and an immense fall boom.

One of the coolest, most reliable, and most sagacious of our Cincinnati manufacturing stationers has just returned from a long trip of inspection through the country. It involved a railroad ride of thousands of miles. He was in the country which was stormed over so much recently, and he was mixed up in some of these storms. About the crops, he says they are absolutely immense everywhere, from the plateaus of the far North, all the way down the valley of the Mississippi and all the way up the valley of the Ohio and around the lakes. About the storms, he says, some of them were disagreeable in limited localities, but most of them were exaggerated as to their severity, all as to the extent of the damage they effected.

"How about stocks ?" I inquired, meaning stocks of goods in store among country mercantile dealers.

"Low," he said, "quite low ; indeed, I might say, universally low."

"Then you look for a big fall boom if the corn crop turns out good ?" I inquired.

"That's it, my boy."

"And you say the stocks are light—how about envelopes ?"

"Oh, yes; isn't that a nice predicament the envelope manufacturers have gotten into ? Why they have overstocked the whole country. I'll tell you how. You see they combined and put up the price in the future and announced it to the trade. That made a boom for them at the present prices which were low. Everybody bought in advance of the rise. Now, don't you see where they'll be when the rise does go into operation. They'll find no demand to speak of for their goods at advanced prices on an overstocked market. The fact of the matter is they are in a box, and they'll find an 'advance backward' will be more likely than any forward movement in the present condition of the supply of envelopes in store in the country." PRINCE WILLIAM.

TORONTO TATTLE.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., July 8, 1882.

When I wrote you last, we were on the eve of a general election, and the public generally were so full of politics that I thought it better to return to town for a few days and try my hand again when the affair had blown over. It is wonderful how soon the steam escapes when the returns are known. Men who the day before seemed wound up to the very highest notch of excitement, and were fit for anything, became tame lions which a little child could lead. The result was what cooler heads anticipated. The government has been sustained by a very large majority, and in many respects the victory is more complete than that which carried Sir John A. Macdonald into power in 1878.

A day or two after I set out again, and in due course was set down at St. Thomas, the county town of the County of Elgin. It is a flourishing place, surrounded by a splendid farming country, and is the headquarters of the Canada Southern Railroad. It is also the terminus of the Credit Valley Railroad, and is touched by two intersecting lines of the Great Western Railroad. The town has greatly improved since my visit a few years ago. The book and stationery trade is represented by A. McLauchlin, who has an old and well-established business, under the management of Mr. Forbs, and Rawlinson & Co., and W. Murch.

From this point I proceeded to London, which we are wont to designate the "Forrest City." Here I found the dealers Anderson & Co., W. Carrie, Reid Brothers, Mills, and others in a very contented state of mind. Business was then rather quiet, a result which is looked for at this time of year. Yet the spring trade had been good, and now with the closing of the schools and the temporary flight of many to different parts of the land for recreation, gives the bookseller a chance also to have an outing.

My next point West was Chatham, another busy town, and the capital of the County of Kent. There is probably not a finer county for the agriculturist in America. The crops here this season are superb, and indeed throughout this province the prospect is most charming. I arrived on Saturday and remained until Monday, and for the first time this season was almost overcome with the heat. I found more occupation, although Sunday there was desirable, in trying to find a cool place and wiping the perspiration from my face. I thought of the saying, "'How I sweat,' said the mutton-chop to the gridiron." There are four good book and stationery stores here, viz., Robert Cooper, John Morrish, W. Morrish and Holmes.

Thence I directed my course east to Guelph and called on T. J. Day and Willis & Co., and then home. I do not wish you to think, Mr. Editor, that I neglect your interest in these trips, for I always arm myself with THE AMERICAN STATIONER, and advocate its claims on the trade ; but for some reason I cannot explain, I have not so far succeeded in getting my Western friends to see it in the light I wish or think they ought. The excuses were varied and many. Some were getting more papers now than they used ; others were already receiving trade journals, &c.

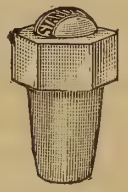
The Christmas card trade is positively becoming a nuisance. There are more people in it than one could well count. The trade have been worried week in and week out for three months at least with samples of these goods, and the card canvasser will soon, if he is not now, placed on a level with the much abused book canvasser, and had better keep an eye open that a line of retreat is available. I do not wish to be understood as having anything against these beautiful goods. There is no end to their excellence or variety, and there is the trouble. There are far too many into it, and it is simply impossible for ordinary trades to buy even a fraction of what are offered.

I have received the painful intelligence that Major John Brown, of the firm Brown Brothers, was dead. The deceased gentleman was taken ill early last December, and was a great sufferer during the long illness which terminated fatally last night. This sad event removes from us one of the best known and most respected of the business men of our city. The firm of Brown Brothers, so widely and favorably known, was established over a quarter of a century ago by three brothers, Thomas (who died some years ago), John and Richard, who succeeded their father as account-book manufacturers, bookbinders, wholesale stationers, &c., and by their industry, geniality and probity soon placed their house at the head of the trade, which position they have ever since maintained. I cut the following notice from a city paper :

The death of Major John Brown, which was hourly looked for for the past few days, took place at his residence, southwest corner of Sherbourne and Gerrard streets, at eight o'clock last night. Deceased was a native of Newcastle-on-Tyne, and came to this country about the year 1848. In company with his brother, he entered into the business of wholesale stationers on King street, where, under the well-known sign of Brown Brothers, the business is still carried on. In 1856 the deceased gentleman joined as a private the first volunteer company in Toronto, which is now A Company of the Queen's Own. In 1860 he obtained his commission as ensign, and four years later was promoted to a captaincy, going to Niagara in command of No. 1 Company, Second Administrative Battalion. Here he remained during the winter of 1864-5. In the Fenian troubles of '66 he took an active part, and was present in command of his company at Ridgeway on that memorable 6th of June, sixteen years ago. He obtained his majority in 1867, and in 1870 retired retaining rank. His retirement was made the occasion of a presentation and address at the hands of the officers of the Queen's Own, who, in losing Major Brown, lost one of the most popular officers of the regiment. The deceased gentleman, who was aged fifty years, leaves a large circle of friends and relatives in this city who will long mourn his death. Funeral will take place from the family residence at three o'clock Monday afternoon.

The following, which may be of interest to some of your readers, is cut from the *Monetary Times* just to hand : "It gives us pleasure to find a Canadian firm of engravers and lithographers in the field with designs for Christmas and New Year cards, 1882-83, which are novel and meritorious beyond the common. Rolph, Smith & Co. have prepared specimens of forty-eight designs which must commend themselves to all lovers of Canada. There are twelve cards representing Canadian birds, twelve Canadian wild flowers and twelve Canadian house plants, some of the latter two dozens conventionalized by a truly artistic hand. Then there are three which show Canadian berries—very attractive cards they are—and nine which illustrate our scenery, *not*, we are glad to say, the usual winter scenes alone, or even mostly. Some of these bird and flower cards are worthy of Prang, and we shall be astonished if they do not sell freely, on their merits, in the United States."

A long-established bookseller at Peterboro, John I. Davidson, has been somewhat unfortunate, having made his second failure, the first occurring two years ago, when he compromised liabilities of $6,000 for $3,000. Since then he has been assisted by friends. In order to save them trouble he sold out his business to D. Davis for $1,200. Of this sum rent and borrowed money absorbed $1,000. The balance of the purchase was in the shape of a note, which was handed over to his principal creditor, Campbell & Son, in this city.



The firm of Sutherland, Millar & Co., general stationers, Montreal, has been in some difficulty of late, and at a meeting of creditors held last Tuesday tenders were received for the estate from the partners. The offer of Mr. Sutherland being the highest, was accepted, and he will carry on the business alone.

The experience in Winnipeg of W. H. Nagle, publisher, has not been satisfactory. The sheriff has had charge of his premises for a time, but an arrangement was effected and that functionary was finally removed. Mr. Nagle is now trying to dispose of his plant and machinery.

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

☞ ANNOUNCEMENT. ☜

WE beg leave to announce the completion of our line of CHRISTMAS and NEW YEAR CARDS for the Season 1882–1883, for which our Agents will commence to solicit orders in May. We feel confident that the popularity which our Cards have enjoyed in former seasons will again be secured by the efforts we have made to bring out a line in advance of all our previous productions. The names of the Artists who have contributed designs is proof of our continued efforts to reach the highest excellence. We will name only the following:

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,

MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

Due regard has again been paid to the literary matter in connection with the designs, and many of the latter are accompanied by original poems, from writers of note, such as MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

Fringed Cards—All furnished with envelopes and protectors.
Envelopes—Furnished without extra charge for all cards for which the list price is $1.80 and over.
Backs have been specially designed for our cards, adding an attractive feature to them.

Bird Cards, by Miss F. Bridges, Mrs. O. E. Whitney and others
Figure Cards, by Miss L. B. Humphrey, Miss Rosina Emmet, Miss L. B. Comins, Alexander Sandier and others.
Flower Cards, by Mrs. O. E. Whitney and others.
Fan Cards, by Mrs. O. E. Whitney, in new styles.

PRANG'S PRIZE CHRISTMAS CARDS.

THIRD COMPETITION

FIRST.—Artists' and Popular Prize Card ($2,000), by Miss Dora Wheeler,

PHOTOGRAPHY FOR THE PEOPLE.

By Percy A. McGeorge.

Modern, or, as it is technically termed, gelatino-bromide, dry-plate photography has taken the world by surprise. The old and the young, the rich and the poor, the educated and the illiterate, have alike succumbed to its fascinations; and no wonder, for its simplicity, its inexpensiveness and its universality of application by the people, as compared with the ordinary wet process, is immeasurable. The professor, the student, the schoolboy, the journalist, the magazine writer, the artist, the mechanic, the lady or gentleman of leisure, the tourist, the architect, the manufacturer, the miner—all the world, in fact,—have found a new and useful and more or less profitable adjunct in the camera.

Why is this? it may be asked. Because the old, unmanageable, slow, expensive collodionized wet plates of the past have been succeeded by the rapid, highly-sensitive, dry and easily-manipulated dry plates of to-day. Formerly it was necessary (except with some of the antiquated and equally impracticable dry-plate processes of the earlier days) to provide one's self and carry a cumbersome and complicated outfit of apparatus, chemicals and glass, and be prepared for untold difficulties of manipulation, under distressing circumstances of discomfort, in order to achieve what may now be successfully accomplished with a ten or twelve pound equipment, or even a lighter one, if a small-sized plate should suffice.

Another important consideration is the corresponding reduction of expense, although in this respect much may depend on the wealth or the wishes of the purchaser. Equipments may be had of the Messrs. Anthony for the insignificant sum of twelve dollars—with which excellent photographic negatives have been made,—or the investment can be augmented to hundreds, including one or more of the celebrated Dallmeyer lenses, a camera of polished mahogany, and so forth.

And although much necessarily depends on the quality of the instruments selected, it is nevertheless true that a photograph can actually be made without them, either by the direct contact of a sensitized plate with a partially transparent object, or, where this is impossible, by placing the sensitized plate at one end of an ordinary box and allowing the desired image to be impinged on it through an opening in the other end, provided no other light falls on the plate but that which passes through the orifice. Indeed, one of the most eminent gentlemen engaged in the business began his career in photography by availing himself of the combined facilities offered by a superannuated cigar-box and a spectacle lens.

In practice, the apparatus now ordinarily required by an amateur photographer for the new process consists simply of—

1. A camera with its lens, and one or more plate-carriers charged with dry plates, and,

2. A tripod or stand whereon it may be placed.

This includes everything necessary to be carried from the dark room or closet, excepting a piece of black muslin or cloth to shield the eyes from the strongly diffused light, and thus to increase the distinctness of the image on the ground glass, and the magnifying glass to aid the sight in detecting more readily when a perfect focus has been obtained.

For development of the latent image, these must be supplemented by a couple of japanned iron trays or dishes of the proper size, a pair of small scales and weights suitable for weighing ounces to grains, a few glass funnels and graduates, a sheet of blue litmus paper, a few sheets of filtering paper, some oxalate of potash, C. P. sulphate of iron, and hyposulphite of soda, together with a smaller quantity of sulphate of copper and bromide of potassium.

This entire equipment or outfit, including the apparatus of the ordinary make, in the size of 4x5 inches, can be had for twelve dollars, and an additional expense of a couple of dollars for dry plates will enable almost any one to secure a score or two of good negatives.

A detailed description of the apparatus is scarcely necessary here, for its uses are so obvious and so fully stated in the instructions ordinarily given, that, with care in following them, cleanliness in manipulating, a discriminating taste in the selection of the point of view, and a slight familiarity with the variations in the intensity and direction of the light, any one can achieve successful results after a few preliminary efforts.

It should be remembered, however, that the sensitized plates should in no instance be exposed to other than ruby rays until the final operation of fixing.

The first care, after receiving the equipment, should be to cover the window and crevices of the room wherein the operations are to be conducted with some sheets of non-actinic paper—which is specially provided for the purpose,—for if the slightest gleam of actinic light should fall on the sensitized plates while being transferred from the original package to the plate-carrier, or during the subsequent manipulations of development or washing, the result would surely be disastrous.

Neither should the plate be exposed ever so little by withdrawing the slide from the plate-holder until the proper moment arrives, after which the slide should again be quickly replaced. Some very intelligent persons have even forgotten to withdraw the slide at all, and found to their astonishment, when the development was undertaken, not the slightest trace of the pictures expected, imagining that the uncapping and capping of the lens was all that was required.

Daylight may be dispensed with altogether, if so desired, in the dark room, and lamps provided with a ruby-tinted chimney of the proper shade may be procured, adapted either for oil or gas.

EXPOSURE.

The duration of exposure will depend much on the strength or actinic force of the light at the time the latent image is being made, the relative rapidity or sensitiveness of the plate used, and the character of the subject. For instance, much more time is required for a dimly lighted interior, or one illuminated with stained-glass windows, than in another copiously flooded with light. For the same reason a much shorter exposure will suffice out-of-doors when the light is not obscured by foliage, lofty buildings or deep cloud shadows. A very little practice, however, will enable one to recognize these differences, and to determine whether one second, two, five, or more, are best adapted to the work in hand.

Having secured as many plates as may be desired (one dozen may easily be carried), they are to be rigidly guarded from exposure of any kind, either from breakage or by, as is sometimes the case with imperfectly made carriers, the slipping out of the slide and the consequent re-exposure of the negative. A good practice to follow is the numbering of each plate, so that the same one may not be twice used. These may be developed in the dark room immediately on one's return, or kept for weeks or months in their carriers and undeveloped condition with safety.

THE DEVELOPMENT.

There are two general methods of developing the gelatino-bromide plate—what are known as the alkaline-pyrogallic and the ferrous-oxalate developers; but, being the more simple, the cheaper and more generally used, we shall confine our remarks to the latter. For this particular formula we are indebted to T. C. Roche, who has given much time to the investigation and practical working of the process, and who may justly be regarded as an authority.

The first thing to be done is to make what is known as a saturated solution of the oxalate of potash, which is done in this wise:

Take four ounces of the crystals and place them in a wide-mouthed quart bottle, and pour over them a pint of warm water; shake the water from time to time, so as to dissolve as much of the crystals as possible—the more perfectly this is done the better,—and when cold filter into a clean bottle and test for acidity with blue litmus paper. Should this turn from blue to red the solution is acid, the proper condition; if not, add a drop or two of oxalic acid, but this is only occasionally necessary. Now take the same quantity of C. P. sulphate of iron; place in an eight-ounce bottle; fill with warm water and shake freely. When the water has absorbed all of the crystals possible, a drop or two of sulphuric acid may be added, and then the solution is to be filtered into another clean bottle, as before, when it is ready for use.

Then dissolve in the same way ten grains of bromide of potassium in one ounce of water only, and in still another bottle dissolve thirty-two grains of rock candy in an ounce of water and add thirty-two grains of glycerine. These solutions are all for stock, and may be used as required.

Then take of the saturated solution of oxalate of potash four ounces, and pour also into the graduate from four to six drams of the sulphate of iron solution and one dram of the glycerine and rock candy solution.

Pour this mixture into one of the iron trays and carefully place the plate therein, film side uppermost. To all appearance, the plate is in precisely the same condition as at first. Now rock the tray gently from side to side and from end to end, allowing the solution to flow over the plate evenly. Quickly the outlines of the picture will become visible, and finally all of the more delicate details. Allow the plate to remain in the tray for a short time, and, again rocking it, the picture will seem to vanish into the plate again. When it has almost entirely disappeared, the plate is fully developed, and the outlines of the picture may be seen on the back. The plate should now be removed and washed well under a gentle stream of water, for the purpose of rinsing off the unused developer.

By this formula the negatives will be found to come out rapidly and clear, and of a fine printing color.

FIXING.

The fixing of the developed image is comparatively simple of accomplishment and requires only a short time for its completion, the principal care being to thoroughly remove the hypo, that bane of all photographic operations, by perfectly washing away all traces of it from the finished negative.

The solution is prepared thus: hyposulphite of soda, one ounce, and water eight ounces. Pour some of this into a tray kept specially for the purpose, sufficient to properly immerse the

plate, which should be laid in face upward, as before, and allowed to remain until the light color on the back of the plate has entirely disappeared. Then, as already stated, it should be well rinsed with water.

Sometimes, if the plate has been over-exposed, it may come out too soft. This can be remedied by immersing it in a solution called an intensifier, as follows :

Sulphate of Copper	10 grains.
Bromide of Potassium	10 "
Water	1 ounce.

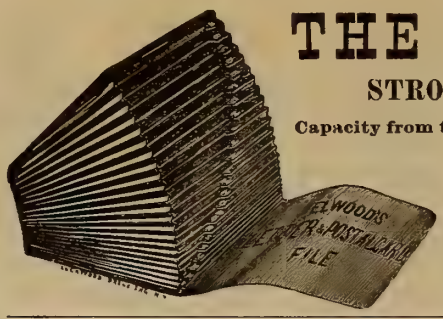
The negative, when fixed, may be safely examined by daylight, gas or oil light, and will be found to have an opposite appearance to that of the ordinary photograph, those parts being dark in the former and light in the latter, and *vice versa.*

The Messrs. Anthony have introduced, it may be well to state, a bottle specially suited for storing the developer, which is a great economizer of the solution, as it admits of its repeated use.

The same firm has also recently introduced a dry plate which never "frills" or runs off the plate, even in the hottest weather, and is therefore adapted to any climate. Furthermore, as the developing and washing may be done with warm solutions, instead of with iced ones, the hyposulphite of soda may much more readily and surely be eliminated, thus increasing the vigor of the negative. Furthermore, these plates may be immediately dried, if necessary, over a spirit-lamp for printing.

A very excellent lantern, glazed with ruby, opal and ordinary glass plates, has recently been introduced by a Mr. Carbutt, of Philadelphia, which is exceedingly practical and useful in dry-plate photographic manipulation.

In practice, success will be found very considerably to depend on the purity of the chemicals employed.



WRITING INKS AND MUCILAGE.

The U. S. Treasury mucilage, black and colored writing inks, manufactured by William A. Davis, Boston, Mass., and whose advertisement will be found in this paper, have gained a large trade and excellent reputation by the uniform good quality and exceedingly low prices at which they are sold. They are now sold by the leading jobbing and commercial stationers in all sections of the United States and many foreign countries.

The U. S. Treasury mucilage has been adopted by the Government departments at Washington, and the justly celebrated Treasury Brilliant Crimson Fluid by the United States Treasury Department as a very superior, free flowing writing fluid, and should be thoroughly tested by the trade before ordering other inks.

Davis' new circular ink rack is made from strong lustral wire, in pyramid form with handle, and contains 3 dozen 1-oz. bottles of assorted colored ink (of six colors), and is the most salable and attractive article ever manufactured for the trade. Samples are freely offered to houses who are willing to purchase the best goods for the least money. These goods are first class in every particular, and find a ready sale wherever used and tried. Samples will be cheerfully sent, and a thorough trial is requested before ordering. Address William A. Davis, 18 Arch street, Boston, Mass.

The National Paper Company's stock house at Holyoke, Mass., was burned Thursday afternoon, probably by spontaneous combustion. The stock, valued at $10,000, and insured for $5,000, was badly damaged by smoke and water.

THE WALTHAM DUSTLESS CRAYON.

THE Manufacturers of the **CELEBRATED WALTHAM CRAYON** hereby notify the Trade that they are now prepared to furnish the very **finest line of Dustless Crayons** ever put upon the market by any manufacturer.

They do not soil the fingers nor clothes in the least; do not require any extra heavy pressure to mark with in the start, as is required with some other Crayons **claimed** to be dustless.

The marking point is not left exposed to soil the fingers, in order to be able to make a clear mark, as in Crayons of other makes.

Our **Dustless Crayons** are acknowledged to be the **freest marking, strongest** and **brightest** colors of any before the public.

Samples and prices will be cheerfully sent on application, that a thorough test can be made before purchasing. The price is but a **slight advance** on our ordinary and regular Crayons.

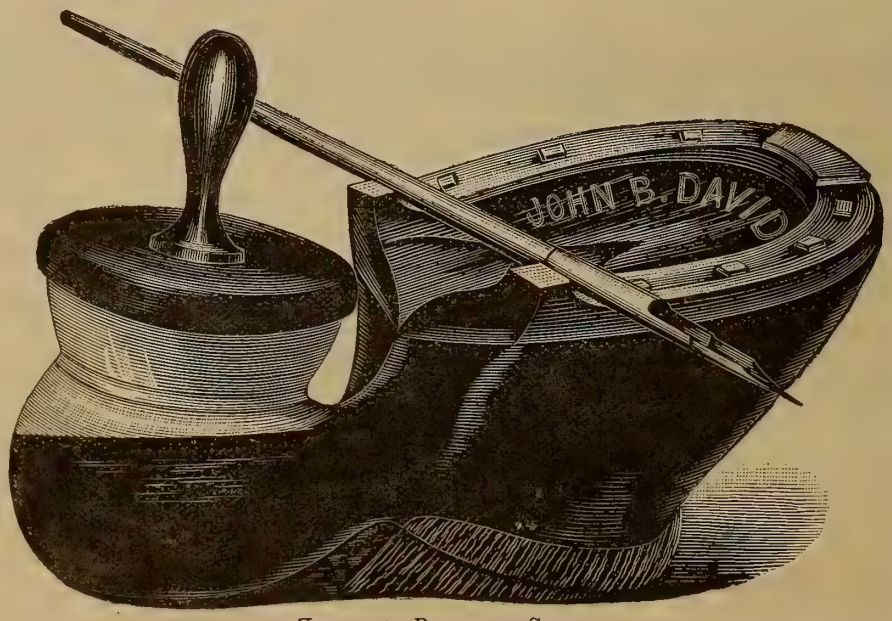
Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

TOY AND GAME CABINET.

Wilson Brothers, 119 Chambers street, have just introduced a new family toy and game cabinet, which contains toys and games suitable for persons of all ages, and consisting in part of dominoes, checkers, checkerboard, game of "Old Maid," toy village of twenty-one buildings, rainbow whirligig, "Boss" top, parlor tenpins, alphabet blocks, toy table, set of dishes, chopping bowl, chopping knife, bread bowl, Chinese jack straws, eight animals, &c.



The same firm has also introduced a new toy laundry set, consisting of a striped red-and-white cedar tub, with brass hoops, brass-hooped pail, clothes wringer, ironing table, clothes horse, clothes pins, soap bowl, pastry roller, pastry board, potato masher, washer, scrubbing brush. All of these articles are packed in a slide-cover wood box. The accompanying cut represents the toy and game cabinet.

TOY AND GAME CABINET.

HORSESHOE RESERVOIR STAND.

The cut represents John B. Davids & Co.'s patent Horseshoe Stand for mucilage. As a reservoir stand it is claimed to be pre-eminently the best ever designed, being so constructed with a narrow bottom and high bridge at the feeder as to permit the mucilage to enter the well in only such quantities as needed. This prevents the disagreeable and unnecessary clogging of the orifice, which is so common to all other reservoir stands. This stand is modeled from the hoof of a thoroughbred horse, of which it is, when inverted, a perfect fac-simile. It is made of rich flint glass, and in point of beauty is unapproached by anything heretofore produced. Each stand is accompanied by a handsome black enameled cap and brush, and packed one in a box. The reservoir stand is also used for ink, with black enameled well cover. Other features of convenience will be apparent upon examination of the engraving.

HORSESHOE RESERVOIR STAND.

CALENDAR.

A very detailed illustration is given of an improvement in dial and tablet calendars, the object being to furnish a calendar that shall comprise the desirable qualities of comprehensiveness in the range of dates, devices for giving prominence to current dates, and such compactness in form and simplicity of construction as will render it convenient in use, economical in cost, and neat in appearance. This object is attained by the use of three pivoted dials, one of which contains characters indicating the days of the week, while the other two contain respectively ten and three large figures or numerals, placed in proper relation, and adapted to exhibit jointly any required day of the month.

In the drawings Figure 1 is a face view of the calendar. Fig. 2 is a section of the same on the line *x x* of Fig. 1. Fig. 3 is a view of the calendar frame unfolded. Fig. 4 is a back view of the calendar, showing a modified form of frame. Fig. 5 is a plan of the disk or dial containing abbreviations of the names of the days of the week. Fig. 6 is a plan of a small dial containing the first three numerals; and Fig. 7 is a plan of a large dial containing ten numerals or figures, from 1 to 0, inclusive, the dials represented in the last two mentioned figures being used to designate the days of a month. The frame of the Calendar A is made of a sheet of cardboard or similar material, which is preferably folded in long folio at the transverse line of perforations *a*, as shown in Fig. 3. If desired, however, the frame may consist of a single thickness of any suitable material. The face of the frame is provided with an oblong opening, B, to the rear of which is pivoted the disk or dial B′ by means of an eyelet, *b*, which is so arranged above the opening B that the abbreviations indicating the days of the week, which are printed or marked upon the dial near its margin, may be made to appear successively at the opening B by turning the dial upon its pivot. The eyelet *b*, besides forming the pivot of the dial B′, also serves as a convenient suspension ring for the support of the calendar.

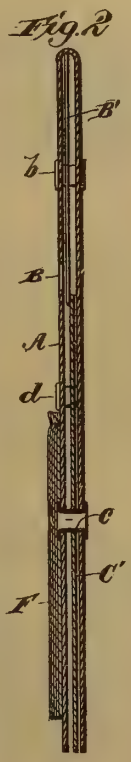
Below the opening B, and in line with each other, are two circular openings, C D, to the rear of which are pivoted by means of the eyelets *c d* the disks or dials C′ D′, that together contain the necessary numerals to indicate the days of the month. The large dial C′ has a diameter equal to the width of the calendar frame, while the diameter of the small dial D′ is about twenty-seven fifty-ninths (27-59) less than the width of the frame. On the larger dial C′ are printed the ten figures 1 2 3 4 5 6 7 8 9 0, and on the smaller dial D′ are printed the figures 1 2 3, a blank space being left between the figures 1 and 3, in which said blank space a simple dash or dashes can be printed. It being important that these figures should be as prominent as possible, they are made large enough to fill the space exposed by the two perforations or openings C D, each of which perforations has a diameter equal to one-fourth the width of the calendar frame. The figures on the large dial C′ are arranged eighteen degrees out of perpendicular, as shown by the dotted line in Fig. 7, and the figures on the smaller dial D′ are arranged forty degrees out of perpendicular, as shown by the dotted line in Fig. 6.

In order to find the proper point for pivoting the small dial D′, a perpendicular and a horizontal line are run so that they shall intersect where the large dial C′ centres. A circle is then struck, the radius of which shall be one-third the width of the calendar frame, and the proper pivotal point will be forty-seven degrees above the horizontal and forty-three degrees to the left of the perpendicular line. This will bring the pivoting eyelet *d* of the small dial D′ close to the aperture D, while the periphery of the small dial will come flush with the edge of the calendar frame, will just miss the eyelet *c* of the large dial C′, will approach closely, without touching, the figure exposed at the opening C, and will conceal the dial figures on the large dial without exposure of the small dial at the openings B and C. These proportions may be somewhat varied by using smaller figures; but in any case the points above mentioned must be made to harmonize.

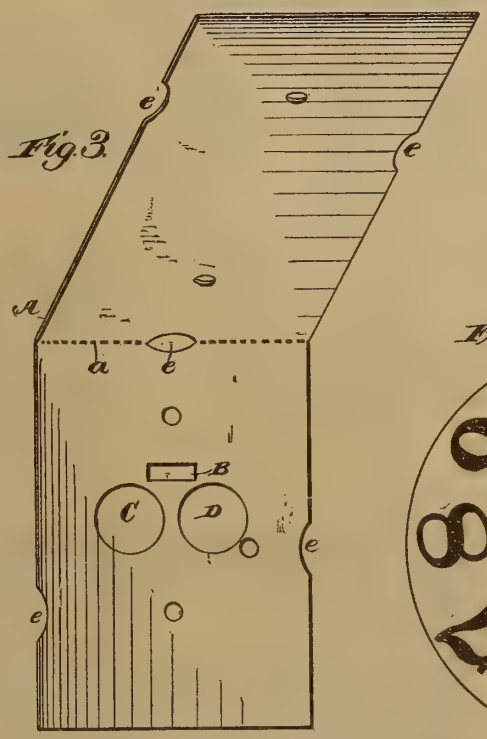
It should here be observed that when the calendar frame is made double and the overlapping dials inclosed therein, as shown in Figs. 1, 2 and 3, the eyelet *d*, used for pivoting the small dial D′, must be fastened to the upper or front portion of the frame only. This double frame A is provided with perforations corresponding with the eyelets *b c d*, and has notches *e* at the top and sides for convenience in manipulating

the respective dials which register with said notches, as shown in Fig 1.

A certain amount of labor and material may be saved by employing only a single sheet of card-board or other material for the calendar frame, and either supporting the dials at the back by means of a strip, E, as shown in Fig. 4, or leaving them unsupported, as may be desired. This strip may be arranged vertically, as shown, or may be placed diagonally or transversely across the back of the frame, the vertical position being preferable, as it is thereby less liable to become detached.



The advantage of the double card-board frame consists in the fact that it incloses and protects the dials, and so stiffens the whole structure that a lighter material may be used. The principle of construction is the same whether the calendar is made of a single or double sheet of card-board, the latter form, however, being deemed preferable for the reason stated.



Attached to the face of the calendar frame, directly beneath the circular openings C D, is placed a monthly tablet, F, composed of sheets that may be torn off in succession at the expiration of each month. These sheets are each provided with a title-line that gives the name of the month and year, the words or characters printed upon said line having a proper relation in size and position to the conspicuous characters displayed above it at the openings B, C, and D, while the bottom or connecting sheet of the tablet is provided in the usual manner with a miniature calendar for the whole year.

It is obvious that the calendar, when constructed as described, may be adjusted instantly, as it is only necessary to turn the dials B and C one point each day, to turn the dial D one point or figure each tenth day, and to tear off a tablet sheet at the expiration of each month. The blank space on the dial D', between Figs. 1 and 3, will be brought opposite the opening when figures below ten on the larger dial are exposed. This calendar is the invention of John Cussons, Glen Allen, Va.

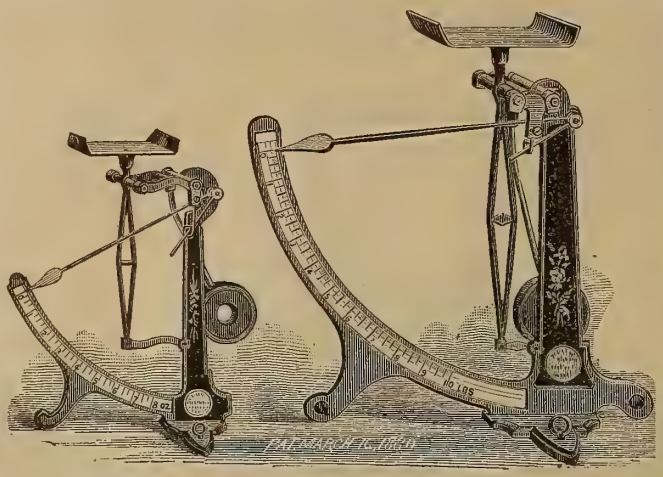
CALENDAR.

MILTON BRADLEY & CO.'S NOVELTIES.

The Windmill and Lighthouse is a large and attractive toy, made on the combination principle, by which several different things can be made from the same parts—a feature very popular in modern toys.

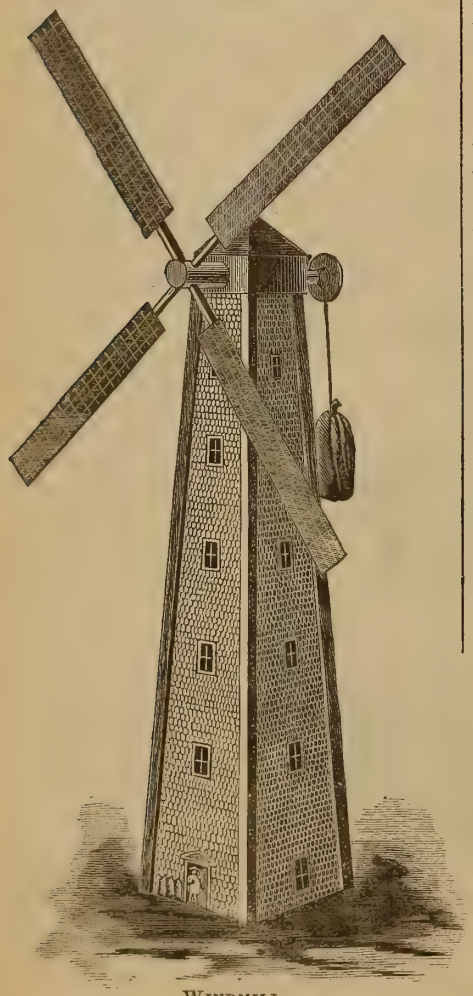
A number of thin wooden tablets are joined by suitable grooved corner posts to form a square tower, smaller at the top, and are so decorated that, when set up one side out, an old-fashioned shingled windmill is formed; while in the reverse position the heavy stone-work of a lighthouse is presented. A suitable top-piece, with shaft and sails, in one case completes a windmill, while another top, representing the lantern, makes a complete lighthouse. An old miller is seen in the door of the mill, while a sailor sits in the lighthouse door. In all toys some motion is desirable, and in the windmill it is secured in a very simple and perfect way. On the horizontal sail-shaft and concealed inside of the tower, hangs a weight working in a very small shaft; while outside, and winding on a larger portion of the shaft, a bag of meal is suspended. If the weight is wound up and the sails set at such an angle as to offer just the required resistance, the bag is slowly lowered and then again raised without any visible power, except the apparent force of the revolving sails. As an out-door toy the operation may be reversed, and the inside weight being removed, the wind will revolve the sails, thus forming an actual windmill. The lighthouse is provided with storm signals, which are to be displayed from the top of the dome, according to directions provided. This toy is well adapted for use at the seashore on the sand, as both forms are suited to the place and occasion.



The Automatic Inclined Railway is a double-track inclined railway, on which one car runs up, while the other runs down. Two sets of cars are provided. The covered passenger cars are operated by simply exchanging roofs, a concealed weight in one causing the car in which it is placed to descend. The other cars represent coal cars, which are moved by loading toys or other objects of weight into the upper one. The element of mechanical motion is also embodied in this toy.

Bradley's Interchangeable Combination Circus is a new combination picture puzzle toy, on the principle embodied in the popular matched pictures, and for which Milton Bradley & Co. have recently received a very valuable patent covering the general principles of this popular class of puzzles which they publish. In this

case the subject is the ring of the circus. As shown in the accompanying engraving, the picture proper comprises twelve pieces, in addition to which there are some twenty-five other pins, which are largely interchangeable with each other, and, with the original twelve, thus forming an unlimited number of combinations, comprising the riding, balancing, racing, driving, &c., not excepting Jumbo, the baby elephant and the tamed giraffe. Anyone who knows anything of the American toy can see that this will have a wide sale.



Bradley's sectional railroad puzzle is another picture toy on the same general principle as the circus, but more practical and educational. A large number of pieces in chromo-lithography represent a locomotive and the cars of a first-class American express train, including baggage and express, mail, smoking, dining, sleeping and drawing-room cars. The various parts, such as trucks, platforms, roofs, &c., are interchangeable, and interior views may be substituted for the exterior in any of the cars. The natural love of the children for a train of cars in any form, and the instructive elements of this toy, promise much for its popularity.

The leading game among the novelties is "Costumes and Fashions," a set of beautifully-designed cards in chromo-lithography, representing the costumes of all ages in groups of three. Each group forms a complete picture, on the principle of "Old Maid Improved." Patented and immensely popular. The cards form a series of dissected pictures, representing three costumes of various ages and nations; and in addition to the interest in the game as such, the pictures are valuable guides in getting up costume parties and tableaux, as they have been designed with great care by an artist specially competent in this line.

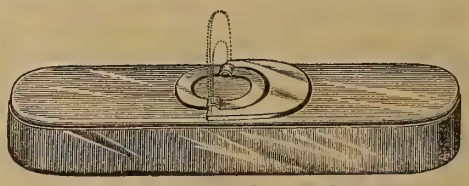
FULTON'S GRAVITY SCALES.

Space permits notice of only a portion of the novelties now ready or in actual preparation by this wide-awake house in its new quarter, just built for its special occupancy.

WINDMILL.

MOTHER-OF-PEARL GLASS.

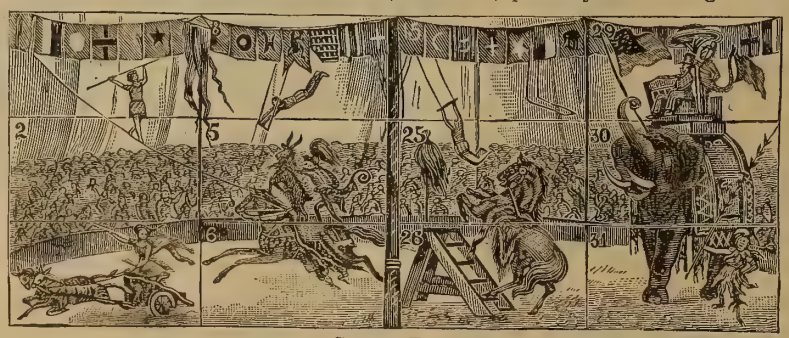
A novelty in glassware has been produced by a Bohemian firm, and a foreign contemporary gives the following as being the method of preparation of what is called "Mother-of-Pearl Glass:" Forty parts silicic acid; 40 parts red lead; 10 parts carbonate of potassa; ¼ part chloride of potassium; 5 parts nitrate of soda; ⅛ part arsenic; 1¼ parts phosphate of lime. These ingredients are thoroughly mingled, and are fused in the same way as glass or any similar composition. This combination forms a composition of glass containing lead. The quantity of red lead may, however, be varied at discretion; and even without any red lead a mother-of-pearl glass can be made. Phosphate of lime and chloride of potassium must, however, be always used for the purpose of imparting the necessary appearance. For the coloring of the glass the usual substances are employed—cobalt for blue, chloride of gold for red, chromic acid or oxide of copper for green, &c. This glass has a glitter similar to mother-of-pearl, it is said, and can be used in place of the natural substance. In this invention is shown another instance of the exertion of human ingenuity to avert the drain upon nature and to cheapen the cost of production. Like other substitutes, this mother-of-pearl glass will probably find a wide market and extended use.



FULTON'S GRAVITY SCALES.

The cuts illustrate the new office scales manufactured by the Fulton Gravity Scale Company, of Cincinnati. These scales are particularly adapted to weighing mail matter quickly and accurately. Absolute simplicity and convenience are attained in their construction, as they dispense entirely with weights, springs or slides. The scale consists of a durable frame, which supports the working parts. They in turn are made to move the indicator and pendulum. The platform or scoop is slightly depressed when an article to be weighed is laid upon it, thus causing the pendulum to rise and the indicator to register the exact weight on the dial. The dial is divided into equal parts, requiring no calculating to ascertain the weight. The workmanship is superior in every respect, securing both durability and beauty of finish.

Besides being remarkably useful, these scales are novel and attractive, and dealers everywhere are finding a rapid sale for them. Communication may be made direct with the manufacturer, or to its wholesale agents, J. B. Lippincott & Co., Philadelphia, and B. W. & H. S. Child, Boston.



FOLDING-HANDLE POCKET STAMP.

A novelty in rubber hand-stamps is illustrated. It has been introduced by R. H. Smith & Co., Springfield, Mass., and is called the folding-handle pocket stamp. It is very neat, compact and very convenient. The handle, which turns up when it is needed, laps over a little, so that a person with gloves on need not take them off to use it. It is 2¼ inches long, ⅝ inch wide, and ¼ inch thick. It has rounded corners, and is perfectly dust-proof.

FOLDING-HANDLE POCKET STAMP.

A new noiseless slate has been brought out. By the use of suitable machinery the binding is fastened to the frame by sewing directly through the wood, precisely as clothing is bound by machine stitching. It is said to be very durable, and if the binding should be torn off or worn by rough usage, any one who can use needle and thread can repair or replace the covering in a few moments. The frames are stamped with rules for measurement.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

W. L. Dillono, dealer in paper bags, New York, N. Y., is dead.

S. Kafka, paper stock dealer, Portland, Oregon, has been burned out.

Gleim Brothers, booksellers and stationers, Denver, Col., have assigned.

E. Kirschberg, dealer in notions, Leadville, Col., has made an assigment.

C. F. Jenkins, printer, Coatesville, Pa., has sold out to W. F. Potts & Co.

P. McCullough, of McCullough & Smith, paper stock dealers, Pittsburg, Pa., is dead.

E. L. Sprague has succeeded Sprague & Spencer, publishers, Traverse City, Mich.

Yancey, Waddy & Co. succeed J. A. Yancey & Co., booksellers and stationers, Richmond, Va.

J. P. Emmerson has bought out the business of J. Sewell, news dealer, &c., Healdsburg, Cal.

Segner & Condit, subscription book publishers, Burlington, Iowa, have dissolved partnership.

Randolph Baldwin, dealer in fancy goods, Halifax, Nova Scotia, has sold out to John Baldwin.

Borax & Bacon, printers and publishers, Henrietta, Texas, have dissolved partnership. Mr. Borax continues.

Correll & Fehr, publishers of the *Argus*, Easton, Pa., have dissolved partnership. I. L. Fehr continues.

The style of Warren, Fuller & Co., dealers in wall-paper, New York city, has been changed to Warren, Fuller & Lange.

James J. Chapman, stationer, &c., Washington, D. C., has admitted Geo. J. Chapman to partnership, under same style.

The stock of Rosenbaum & Co., wholesale and retail dealers in notions, Pittsburg, Pa., has been damaged by fire; fully insured.

F. W. Washburn, of the firm of J. M. Peter & Co., dealers in wall-paper, Cincinnati, O., has assigned to Aaron B. Champion.

Matchett & Co., paper-box manufacturers, Pittsburg, Pa., have dissolved partnership. R. B. Black retires and Alex. Matchett continues under same style.

Stedman & Cartwright, dealers in rags and paper stock, Philadelphia, Pa., who dissolved partnership on the 27th ult., have renewed copartnership under the same style.

Arthur & Bonnell, stationers, New York city, have dissolved partnership. A limited partnership has been formed under the same style with special capital of $10,000, to April 30, 1884.

Bugbee & Kelly, stationers, &c., Providence, R. I., have dissolved partnership, John H. Kelly having withdrawn. John E. Bugbee, Walter F. Thompson and Henry B. Simmons continue as Bugbee & Thompson.

The assortment of school supplies offered by Reynolds & Reynolds, Dayton, Ohio, is probably the largest ever put out by one manufacturer. They make from the raw stock every book that they sell. The advantage of buying direct from the manufacturer is well known.

Boorum & Pease seem to be very much encouraged with their success in photograph albums, judging by the many new patterns which they are getting out again. So far they have made medium and fine class of goods, such as retail from $1 to $8 apiece, but now they are getting up extra fine albums, some on stands, others of regular forms, such as will retail as high as $20 each. They propose to prove that every class of goods from the cheap to the finest can be made in the United States; that American workmanship is as neat as German, and a great deal stronger and cheaper in price. In fine leather goods their assortment this year is simply immense, being entirely new, with prices very reasonable. If this line was shown in the large manufacturing centres and chief cities of Europe, it would be considered equal, if not superior, not only to those made by any one manufacturer there, but even to a line of goods shown at large commission houses, where it is known that the samples of most if not of all of the manufacturers can be found together. In scrap books and autograph albums they make a large assortment in fine patterns, and have as many if not more novelties than can be found anywhere else. Some novelties in autograph albums, such as birthday albums, young folks' albums, &c., have entirely new features, and, judging by the sales already made, they will be in great demand. While making these new goods, they do not fail to keep up the largest assortment in their old reliable blank-book line, and keep adding, so that it may be understood that the trade can have almost any kind of blank book which happens to be called for by the consumer. They carry a large stock, and fill orders promptly, and owing to the facilities for manufactnre they can keep prices low. Out-of-town members of the trade visiting the city will be amply repaid by visiting their sample rooms before buying. They will be cordially received, and will be shown everything whether they intend to buy or not.

Myers Brothers are showing to the trade a line of cork cards manufactured by John Walker & Co., London. This line of cards, which met with such success last Easter, the firm is now making in new designs, such as horse-shoes, crosses, anchors, &c.—with flowers and vegetation wreathed about them, adapted for Christmas. Other lines of cards and souvenirs, such as ivory (hand-painted), ivorine, &c., manufactured by the same house, are offered, and will repay time and money expended in examination and purchase. Myers Brothers are also showing some very handsome menus, which are manufactured by the Artistic Stationery Company, of London. They are heavy, bevel-edge, cut mounts, decorated with faint outlines for amateur painting. The menu proper may be written and inserted in the mount. These cards will enable the hostess to display her artistic skill as well as the list of bounties provided for her guests. As most households contain at least one member possessing the necessary talent and training, these menus ought to meet with a good sale.

Henry Bainbridge & Co., New York, offer first quality German slate pencils, No. 6, at 65 cents, and No. 7 at 75 cents per thousand for ten case lots; cash, 30 days. For case orders of twenty thousand their prices are 67½ and 78 cents. They also offer Clegg's rulers and Salter's letter balances at reduced prices.

Reynolds & Reynolds, Dayton, Ohio, manufacture their school supplies in vast quantities. Of their two leaders, they have nearly seven cords, weighing twelve tons, which amount will be increased about 50 per cent., as orders for future shipment already amount to more than half the original run.

Henry Cobb, stationer, &c., Dell Rapids, Dakota, has sold out.

Lewis & Roberts have bought out the *Times and Planter*, Sparta, Ga.

J. Harris Glatts, printer, Wilmington, has sold out to James D. Lewis.

F. R. Straight, bookseller and stationer, Bloomington, Ill., has sold out.

Barth & Preston, newsdealers, Indianapolis, Ind., have assigned to John Kidd.

Robert Easton, bookseller, Lindsay, Ont., has compromised at 60 cents on the dollar.

F. Eastman, of the firm of F. Eastman & Co., printers, San Francisco, Cal., is dead.

Killinger & Benson, publishers of the *Record*, San José, Cal., have dissolved partnership.

John Brown, of Brown Brothers, bookbinders and stationers, Toronto, Ontario, Ca., is dead.

White, Atkins & Co., wholesale dealers in notions, Cincinnati, O., have dissolved partnership.

Haeberle & Lapp, dealers in wall-paper, Louisville, Ky., have dissolved partnership. C. A. Haeberle succeeds.

H. W. Curtiss has retired from the firm of A. S. Barnes & Co., wholesale booksellers and stationers, New York city.

Casey & Bishop, publishers of the *Herald*, Clinton, Ind., have dissolved partnership. Luther Bishop continues.

Thalheimer & Dalsheimer, wholesale dealers in notions, New Orleans, La., have been succeeded by S. Dalsheimer & Co.

J. R. Jacobus, wholesale dealer in notions, St. Louis, Mo., has admitted Julius Weiner to partnership. Style, Jacobus & Weiner.

The Sanford Manufacturing Company, Chicago, Ill., is well sustaining its long-acquired reputation for fine inks, sealing wax and mucilage. In spite of the anticipated backsets of bad weather and light crops, so generally complained of by dealers, this company has had a fine spring and summer trade, which, as yet, shows no signs of abating.

T. B. Peterson & Brothers, Philadelphia, Pa., announce a list of forthcoming books that will be sure to please all tastes, comprising as they do the choice books by some of the best American and foreign writers. Bright and clever novels that will have large sales and at popular prices. A list of these new books and catalogue of popular and fast-selling novels will be sent to any one if written for. Address T. B. Peterson & Brothers, Philadelphia, Pa.

C. K. Wadham & Co., 30 Franklin street, Boston, so well and favorably known for their great taste in the selection of stationers' supplies and their celebrated "Boston card albums" (of which they manufacture some thirty different styles), will show through their travelers an elegant line of all of the novelties suitable for the coming season, in addition to their usual line of first class blank books, which, some people say, may be equaled, but for quality, workmanship and price cannot be beaten.

At a meeting of the New York creditors of Charles Dauernheim, dealer in wall-paper at St. Louis, he made an offer to compromise at 75 cents, 15 cents cash and the balance in notes without interest extending over a period of eighteen months. This was rejected, and he now proposes to pay 40 cents cash, and in case it is not accepted will make an assignment.

The liabilities are about $40,000, and the nominal assets $35,000. He attributes his embarrassment to the unsatisfactory state of business and difficulty in making collections.

The "extra fine" writing papers manufactured by Z. Crane, Jr. & Brother, Dalton, are in great demand. They are adapted to the requirements of the most select trade.

The attention of the trade is invited to an advertisement of Obpacher Brothers in another column. This firm is making a specialty of satin goods and calendars, which the trade ought to see.

The "Old Berkshire Mills" linen ledger papers, manufactured by Carson & Brown Company, Dalton, Mass., have an enviable reputation. Good paper wins its way, and the "Old Berkshire" brand is a standard.

The line of goods, which McCarty & Hasberg intend to place on the market this season will, it is said, surpass anything ever offered by this house. Most of these goods will be described in future issues of THE STATIONER.

A fire caused by spontaneous combustion caught in the rag room of May & Morin's paper mill at East Lee on Sunday evening, and burned the two upper stories and a considerable quantity of finished paper and other stock. The loss is $8,000.

M. A. Reay is actively preparing an immense line of new goods for the fall trade. The Lowell Christmas cards are now ready, and samples can be seen at the store. The firm's travelers will also have samples with them when they go on the road.

A fire, which occurred in the double five-story building, Nos. 108 and 110 Liberty street, this city, on Saturday night, did damage to the property of Leve & Alden, Tourist Publishing Company, to the amount of $2,000, and to Broome & Corlies, stationers, on the fifth floor, $2,000.

The Parsons Paper Company, Holyoke, Mass., manufactures envelope and writing papers which compare with the best in the market. The company also makes bond papers, and its goods are offered to the trade as being in every way adapted to meet the requirements of the general public.

Leatherette is now so much improved that it is quite in vogue, and its use is constantly increasing. Vidal, Pope & Co., 45 High street, Boston, are general agents for the Shawmut Manufacturing Company's leatherette. Their samples indicate goods of excellent quality and of desirable characteristics.

From the North to the South pole—or as near to those terrestrial extremities as it is possible to attain—and around the circumference of the globe, in every known land, the ledger papers made at Dalton, Mass., have found their way. Without disparagement to other makers, it may be said that Byron Weston's linen ledger and record papers are known the world over. They are superb.

Willy Wallach shows a large and entirely new line of Christmas, New Year and Birthday cards, Among these goods may be mentioned, the etchings by Cruikshank, Ellis and other celebrated artists, printed from copper plates on cards and satin, and hand paintings on porcelain, gelatine and ivory. This house also shows a large line of menus, programme and guest cards for all seasons, and, gold, silver, and copper bronzed cards for hand paintings; it also offers colors put up in boxes for painting China, and which it is claimed will not wash off in cold water and assume the appearance of having been baked.

The use of manifold books for copying is increasing daily. The largest manufactory in the world for supplying this demand is said to be that of Samuel Hano & Co., Boston, where no less than sixty different sizes are constantly being turned out. This manufactory is well worthy of a visit, and cannot fail of interesting every dealer in manifold books. The first impression made upon the visitor is the cleanliness and orderliness of the establishment. Attention has been paid to the health and comfort of the employees. Light and pure air are abundant. The firm believe that they lose nothing by treating their help well and considerately. This policy guides their entire establishment, and they are as equally conscientious about the character of the goods given to the trade, as of the health and happiness of their workmen. Sixty-four large windows on either side shed abundant light over the factory, which is all collected on one mammoth floor. In the different processes of manufacture machinery enough for a good-sized printing office and bindery is necessary—cylinder and job presses, power and hand-cutting machines, standing presses, perforators, Champion pagers, ruling machines, &c., with thousands of dollars' worth of stock. The main shaft which drives this machinery is 125 feet in length! Some idea of the work may be imagined when a binder's board 57 feet in length is required in the establishment. The product is sold from one end of the country to the other, and large exports are made to foreign countries. The demand is steadily increasing, and the manufacturers have a right to feel that this is due to the quality of their product.

Special attention is called to the advertisement of Myers Brothers in this and future issues of THE STATIONER. They publish and make known to those interested on the American Continent, the names of the houses from whom they receive these choice productions. They lay claim to the privilege of asserting that they show the finest and largest variety, and for quality the cheapest complete line of Christmas, New Year, birthday and wedding cards, and souvenirs in this market. This house, as is well known, besides being one of the largest jobbing houses of these goods is also a manufacturer, and makes up several unique and artistic lines entirely different from anything shown or produced by others, and it calls special attention to these goods of its own manufacture, and asks a visit from the trade at their warerooms, 62 John street. Nothing so unique has ever been placed on the market combining elegance with utility as the folding card screen manufactured by this house. It is made in two and four folds with or without fringe; the fronts are embellished with a series of De La Rue's cards, and the backs are a marvel of lithographic art—each is put up in an envelope with card protector. This useful and ornamental little production is well recommended to those seeking a novelty for the season. Myers Brothers represent in the specialties named many of the leading publishers of Great Britain, among them being Thos. De La Rue & Co., John Walker & Co., Raphael Tuck & Sons, Marion & Co., E. Bollans & Co., Poulton & Son, Marlborough, Gould & Co., and William A. Mansell & Co.

R. Fideau, 16 Beekman street, is very busy filling large orders for his "Union" and hemp school bags, also waterproof satchels. Mr. Fideau states that the demand at this season this year is a great deal larger than last year, and the business prospects for the fall in this line are very bright. The excessively hot weather of the past few days has very much improved the business in hammocks, and the demand for them is very good, taking into consideration the advance of the season for the wholesale trade.

Loeb & Brother show a line of fancy leather goods, which it might advantage the trade to see, as they embrace many novelties and new designs.

"Paragon" blotting paper is warranted to be made from pure cotton fibre, and full weight is guaranteed. It is made by Sutphin & Wrenn, Middletown, Ohio.

The linen and "extra superfine" papers made by the Platner and Porter Manufacturing Company, are warranted to withstand any climate. They are desirable goods in every way.

Snider & Hoole, 101 Walnut street, Cincinnati, have issued a large, well-printed poster sheet price-list of paper cutters, the list comprising a number of the best known machines of this class.

The ledger, writing and envelope papers manufactured at Holyoke by the Riverside Paper Company are widely sold, and are offered by the maker on their merits. These goods rank among the best, and deserve the countenance of the trade.

Among the various specialties turned out by the Acme Stationery and Paper Company, none deserve greater commendation than its note books adapted for reporter's use. They are made of good calendered white paper with manilla cover, and are strongly bound so that the leaves will not become separated, and they are claimed to be the best in the market.

The semi-annual meeting of the Stationers' Board of Trade occurred on Tuesday afternoon, but owing to the heat and the fact that a number of the trustees were out of the city, the attendance was very small. The vice-president read a report of the work accomplished by the Board during the past six months, chiefly statistical, after which little else was done than the regular routine work.

Among the visiting members of the trade in the city during the past week were: G. M. Courts, of Clarke & Courts, Galveston, Texas; A. A. Son, of Son Brothers, San Francisco, Cal.; M. Wellhouse, of Wellhouse & Sons, Atlanta, Ga.; F. Macdowall, of the Kansas City Book and News Company; Jos. Raynolds, from E. C. Palmer & Co., New Orleans; Robert D. Patterson, of R. D. Patterson & Co., St. Louis; Mr. McCormack, of T. H. Payne & Co., Chattanooga, Tenn.; Henry J. Snider, of Louis Snider's Sons, Cincinnati; W. G. M. Stone, of Stone & Co., Denver, Col.; R. D. Clancy, of J. W. Burke & Co., Macon, Ga.; Amos Pettibone, of Culver, Page, Hoyne & Co., Chicago; H. H. Shepard and M. H. Dickinson, Kansas City; Wm. Ward, of Ward & Gay, Boston; Charles M. Pardee, of the Cincinnati News Company; Mr. Simms, of J. & R. Simms, Chicago, and Mr. Vail, of Sanborn, Vail & Co., San Francisco.

The United States Self-Feeding Pencil, manufactured by the Powers Paper Company, Springfield, Mass., has advantages which it is thought will commend it to buyers of every degree. Its special features are that it is self-feeding and supplies each time just enough lead for use, no more, no less; its lead cannot drop out or recede, because it is held firmly behind instead of being grasped by jaws near the point; its tapered end is a point protector, instantaneous in its operation, and, in uncovering the point, always leaving it projecting the right length for use; yet so constructed that it cannot slip down over the point while writing; it is not confined to one size of lead, but is adapted to receive, and hold firm-

ly, any of the ordinary sizes; its form is that of the ordinary pencil, the most agreeable to hold.

Geo. A. Holland, dealer in fancy goods, Montreal, Canada, is dead.

Chas. H. Seybert, dealer in paper hangings, Philadelphia, Pa., is dead.

Charles J. Cohen, of Philadelphia, left Liverpool for home on July 1, in the Gallia.

D. F. Foley, with Aikin, Lambert & Co., is spending his vacation at Greenport, L. I.

The stock of J. U. Moore, publisher of the *Blade*, Fayetteville, Ark., has been attached.

G. Anderson, bookseller and stationer, Woodstock, Ont., is advertising his business for sale.

Rives & Hunsaker, stationers, &c., El Paso Texas, have sold to J. D. Hurt, and are reported to have left town.

Crane Brothers, Westfield, Mass., have issued a revised price-list of their "linen" and "all linen" papers. Send for it.

The National Blank Book Company is about to issue its new catalogue, which will embrace several new lines of desirable goods.

The Holyoke Envelope Company, Holyoke, Mass., is making a No. 2 quality envelope, which is said to be unapproached in this grade. The samples shown are certainly very nice, and would pass for No. 1. The company claims that it is making the best line of goods in the market—bar none—and as the proof of value lies in the demand, it may be said that printers are ordering the goods because of the uniform gumming, which is accomplished by a patent process, whereby no irregular deposits are made, to the injury of the type. The company is constantly increasing its facilities and putting in new machinery to meet the demands of the trade.

Philip Hake's new line of Christmas and birthday cards surpasses all of his previous efforts. It is so varied in design that it cannot fail to meet the most exacting taste. It would be impossible to describe it in any limited space, and must be seen to appreciate it fully. Satin, silk and velvet are used most lavishly in its make-up, in all of the various tints and colors of these fabrics, worked up into all manner of shapes, and embellished with appropriate sentiments. A number of new and handsome things in papeteries and cabinets are to be seen in his stock, and taken altogether, it is as elegant a display of fine stationery and fancy cards as one would wish to look at.

The Dooley paper cutters are simple in construction, strong and durable, and have unlimited power; almost noiseless in operation; perfectly adjustable; trim very close, and give smooth, true cuts, have camstud to adjust knife, and patent gauge for cutting books, &c. The cutters when in motion, can be reversed in an instant at any point—which will be found very handy in cutting an inch of paper—thereby saving time in the knife not having to traverse to top and return every cut. No other machine in the market can do this. These cutters are built in the most substantial manner of the very best materials, by the Atlantic works, East Boston, Mass. Among other purchasers of these cutters may be noted: Spaulding, Cotton & Co., Chas. E. Perry (2d and 3d machines), Gunn, Curtis & Co. (3d machine), L. Prang & Co. (2d machine), Boston, Mass.; Fall Mountain Paper Co., Bellows Falls, Vt.; The Kellogg & Bulkeley Company., Hartford, Conn.; Kipp & Hamrock, Dayton, O.; Esterbrook Steel Pen Company, Camden, N. J.; Charles Beck, Thomas L. Dando & Co., Reen Lithographing and Printing House and C. J. Cohen, Philadelphia, Pa.; Gail & Ax, Baltimore, Md.; U. S. Government Bindery, Washington, D. C.; Charles P. Rady & Co., and John W. Ferguson & Son, Richmond, Va.

Cooke & Cobb, manufacturing stationers, 10 Broadway, invite the attention of the trade to the announcement of their line of specialties to be found on another page. The sale of all these goods, particularly the "favorite" note and invoice file, and the banker's note case, has increased very largely, and the goods have become generally known throughout the trade as staples. This firm has recently published "Burnett's Musical System," through which it is claimed that everybody can play at sight upon any piano, melodeon or organ without previous knowledge of music, instruction, or ear for music. The system is by figurative musical notation. Each note on the musical sheet is numerically marked to correspond with the numerically corresponding note on any key-board, numbered with consecutive numbers from the treble and bass. The first series comprises twelve tunes. The trade will be supplied at regular discounts.

Eberhard Faber has just introduced a new line of penholders, numbered 4,262, 4,562 and 4,463. No. 4,262 has a fancy rubber-covered tube, finished with two nickel bands; the rubber, which is neat in color, prevents the fingers from slipping and makes it agreeable otherwise to hold. The other numbers have tubes covered with leather, which gives somewhat similar advantages. All have swelled japanned handles. The discharging penholder, a cut of which appears in another place in this issue, has a ring surrounding the tube, and is used to throw off the pen from the tube at pleasure. It performs this office by simply sliding it forward, and therefore prevents the soiling of the fingers. This penholder is numbered 3,876. Pencil, No. 150, with pro and repel movement, and in nickel and gold plate, is still meeting with a large sale. A. W. Faber's steel erasers are now exclusively sold by this house, and are warranted to equal any made. The Para pencil rubber, in bar form, is having a large sale, and is claimed to be the best erasing rubber in the market. The gold-pen department of this house is constantly adding novelties and increasing its facilities, in order to prepare for the expected rush during the coming season. The firm's gold pens are of 16-carat, which makes them very valuable intrinsically, and no effort is spared to have them finished in the best style.

E. Claxton & Co., Philadelphia, publish the Avon Edition of Shakespeare's complete works. The design of the publishers has been to give to the reader, in one volume and in large, clear type, the works of Shakespeare, the text of which should embody the latest revisions of the best Shakespearean scholars. The text used is that edited by William G. Clark and W. Aldis Wright, both of Trinity College, Cambridge, a text that has met with a wide and cordial approval both in England and America. The plays are introduced by a very rich description (by the late Dr. John S. Hart), of Shakespeare's home at Avon, his life, interspersed with illustrations. The auxiliary features of this edition are a carefully prepared analysis of the plots and plays, an index to familiar passages, a complete glossarial index and an alphabetical index to the characters in the plays. Besides the index at the head of each page of the scene and act, and the dark displayed type which indicate the changes of scene and the entrances of the persons of the drama, the full, fair type in the body of the work, is a feature of importance. The price is put very low.

The National Paper Company, Holyoke, Mass., has been burned out; partly insured.

Terrell & Dietz, manufacturing stationers, Louisville, Ky., have dissolved partnership.

Robert Easton, bookseller and stationer, Lindsay, Ont., has called a meeting of his creditors.

Sibell & Hyer have got out a neat circular printed on Lowell's engraved cards. The firm makes a specialty of fine work.

The correct new tint in mourning is gray. J. D. Whitmore & Co. furnish this in all widths of border in addition to their already large line of mourning styles. They claim to do the finest black bordering work in the trade.

William B. Walker, lately of Maurice J. Lobe & Co., Baltimore, has located himself at 16 Hanover street, in that city, as manufacturers' agent, and will travel through the Southern States in the interest of Daniel Slote & Co., M. F. Tobin, and Barnum & Co.

A more elegant novelty in the way of fine writing paper has not been upon the market for years than the "Polka Dot," manufactured by J. D. Whitmore & Co. It has been out only a few weeks and yet has sold remarkably well in spite of the fact that novelties of this sort are not much sought for at this season. Send for samples.

The Acme Stationery and Paper Company reports that the sale of the American blotter tablets is increasing rapidly. Their simplicity, convenience and cheapness are points which commend them to the trade. Those who have not already received the price list of this concern should send for one. Attention is directed to its advertisement in another column.

Russell, Morgan & Co., Cincinnati, manufacturers of the United States playing cards, for which Victor E. Mauger, is general agent, find that the sales of their cards are largely and widely extending. The character of the goods and the way in which they are put up—each pack in a box, even to the cheapest—commend them to buyers. The firm has issued a new price list which the trade ought to secure.

The American Crayon and Slate Company, 43 Dey street, New York (Parmenter Crayon Company, Waltham, Mass., proprietor), invites attention to its advertisement concerning dustless crayons. This company reports that its sales of school slates, crayons and slate pencils is largely increasing. Notice of one or two of the new blackboards will be made under the "Novelty" head in a week or two.

A visit to the various departments of Henry Levy & Son, 477 Broadway, would be well repaid by the pleasing sights afforded in the interesting exhibits displayed. As this is one of the oldest fancy goods houses in the city, it is to be expected that its lines should be rich, new, and striking. Judging from the goods which the firm is now opening it is evident that Mr. Levy, while in Europe, must have not only made large selections but secured the "cream" of the products of several manufacturers. Among the new goods are ladies' sewing-baskets in wire, wicker and satin; cigar tables and boxes, rich fire-gilt bronzes, china and glass ornaments, porcelain statue pieces, and an extensive line of dolls, many of them being French dressed. In the manufacturing department this firm has made great progress in the past few years, and the most important industry there carried on is the production of fancy leather goods, in which

over one hundred first-class hands are employed. This line must be seen to be appreciated. This house also manufactures an elegant line of satin goods, and is constantly bringing out novelties in them.

Black & Clawson, Hamilton, Ohio, report late sales of their improved perforater to Allison & Smith, Cincinnati; *Democrat* Printing Company, Denver; Martin Dries, St. Paul; Samuel Dodsworth Book Company, Leaven worth; Marshall, Son & Co., Boston; Markt & Co., New York (for export); Palmer & Ray (two), San Francisco; John Lendy, Cleveland; J. R. Smith, Philadelphia; Edward Quinn, Milwaukee; Farmer, Little & Co., New York; Geo. H. Sanborn & Sons, New York; Benton, Gove & Co., St. Paul; M. Echeverria, New York; W. P. Sloan, Louisville; Monitor Publishing Company, Fort Scott; Bloss & Cogswell, Titusville; Brown & Tracy, St. Paul; *Herald* Printing Company, Oskaloosa; A. W. Edwards, Fargo; Ramsay, Mallett & Hudson, Kansas City, and the Kansas Publishing House, Topeka.

J. D. Whitmore & Co. are showing a line of eight new designs in stamped work—neat, small and odd—which are a success. In the cheap line of designs in colors—papeterie forms—they are showing a number that are pretty and taking. They have just the papeteries (new idea) to take the children's eyes; in fact, they have a variety specially pleasing to the little folks. One of the specialties of the season will be fancy and elaborate orders of dancing. This firm is prepared to originate any style, more or less expensive, in addition to a large line it is already showing. Its reputation for artistic and handsome menus and guest cards in all grades is increasing. A large edition in the way of new ideas and designs is to be shown this fall. For those in quest of handsome tassels, as well as the cheaper grades, there are about thirty styles, most of them new and original this season, and a richer and handsomer line, it is claimed, has never been seen.

In addition to the already numerous styles of Mark Twain's scrap books, Daniel Slote & Co. have just brought out a number of entirely new designs. Among the most attractive is the style representing the four seasons, the subjects being embossed in gold, silver and colors. Another very pretty style is the "Bird of Paradise," in the same style of stamping as the other. To meet the increasing demand for scrap books of large size they have enlarged the "Daisy and Buttercups" and "Fan and Butterfly" styles, and although these were introduced last season, this enlargement makes them really new books. They have also added a large variety of styles of card albums with reversible folding leaves, adapted for Christmas, birthday and other fancy cards. A feature of the latter is the embossing in bas-relief, both on cloth and silk plush. In the line of blank books, and especially adapted for the holiday trade, are small memorandums with silk plush covers, in various colors, quadrille ruled, gilt edges and handsomely gotten up in every respect, both as to binding and quality of paper and other materials used.

IMPERMEABLE PAPER.—Prepare the two following baths: (1) alum, 25 ozs.; white soap, 12½ ozs.; water, 100 ozs. (2) gum arabic, 6 ozs.; Colle de Flandre, 18 ozs.; water, 100 ozs. Place the sheet of paper in the first bath to be well impregnated. In this bath, the paper is left only for a short time. It is then dried and dipped in the second bath, the same precautions being used as for the first bath. When dry, the paper is hot-pressed in order to render it uniform.

CHEMICAL WRITING FLUID.

Few persons, aside from the professional ink maker, are aware of the difficulty of combining the requisite ingredients in proper and correct proportions to obtain a really good and desirable writing fluid. Arnolds' chemical fluid has won an enviable reputation for its limpidity and general good qualities, and it has been for many years the ambitious aim of manufacturers of writing inks, particularly on this side of the Atlantic, to produce an article equally as good. There has been an interesting test made with the leading writing fluids, the result of which seems to place the new chemical fluid of John B. Davids & Co. far in advance of the English brand, and to put it in the position of being the best extant. The test referred to applies particularly to color and specific gravity, and is as follows:

	Deg.
John B. Davids & Co., specific gravity	4¼
P. & J. Arnold, specific gravity	4¾
T. Davids & Co., specific gravity	6¾

It is noticeable, in comparison, that the writings of the latter two fluids have assumed a brownish tint after the lapse of a few weeks, while that of John B. Davids & Co. is of a clean and pleasing black color. The firm claims that its fluid is the only article of its kind which can be implicitly relied upon to be of one continuous uniform quality and specific gravity; that it will retain its color longer, and is more permanent than any other, and also that it is less liable to thicken or mold. This may, with just reason, be catalogued among the triumphs of American manufactures.

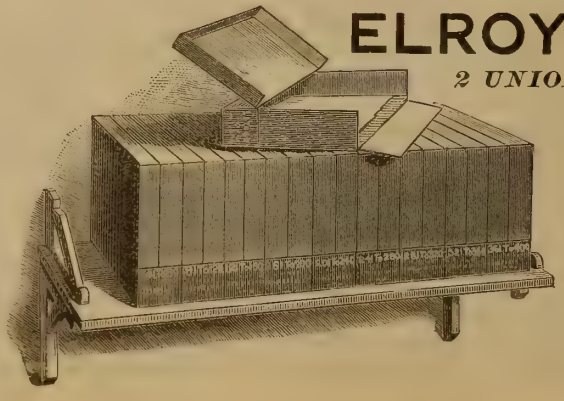
ENGRAVING COPPERPLATES.

Major Waterhouse obtains engravings on copperplates by the following process: The copperplate ready to be engraved is covered with a layer of bitumen, and exposed to the light under the drawing, which has to be reproduced. It is then developed with spirits of turpentine, as by the ordinary method. When it is completely developed, the lines of the drawing appear, the copper not being covered by bitumen in those places. If a cotton rag saturated with a platinum solution is passed over the plate, the lines of the drawing will become black, the other parts being protected by the bitumen. The bitumen, which covers the plate, is then removed by means of benzine, and the design appears in black lines on the copper. This method is only adapted for line drawings, and it can only be applied for ornamenting metallic surfaces. The author finds that bitumen purified by Husnik's process, in solution, is very convenient.

PARQUETRY FLOORING.

The demand for parquetry floors is continually on the increase. They take the place of carpets for covering the coarse boards of ordinary flooring, and are made by ingeniously mortising together different kinds of wood. Most of this flooring is made seven-eighths of an inch thick, and what is known as "wood carpet" is made only about one-fourth of an inch in thickness. The principal body of parquetry work is oak, in different shades, but every kind of cabinet wood is used—mahogany, tulip, walnut, cherry all furnishing a variety of shade, which, when properly set, harmonize with agreeable effect. The entire mosaic, when mortised and joined, can be lifted without breaking or injury. Nothing neater and more refined can be found for a floor covering to a room than a centre rug or carpet, either in the shape of a square or parallelogram, and surrounded on all sides by a neat pattern in wood. If one wishes to practise closer economy he can cover the space occupied by the carpet, the piano, stages or other pieces, with plain wood the thickness of the parquetry wood. The surface polish of the wood must be maintained to retain the beauty and finish of the floor. Waxing is often sufficient, or a vigorous application of shellac varnish. The origin of this style of flooring can be traced back to the early history of Western Asia. The material used was usually marble. From these early days to the present, changes have taken place. Wood has succeeded stone, and the jig-saw the chisel. For some time past, parquet work has been successfully used in Germany, France, and lately in England; and in this country, although new at present, it is likely to attain great popularity. In American homes parquet flooring is particularly adapted for backgrounds, rugs or square carpets.

W. B. CARPENTER & CO.,



—MANUFACTURERS OF—

Odd Sizes and Shaped **ENVELOPES** Only for the Trade,

Nos. 128, 130 & 132 WALNUT STREET, CINCINNATI, OHIO.

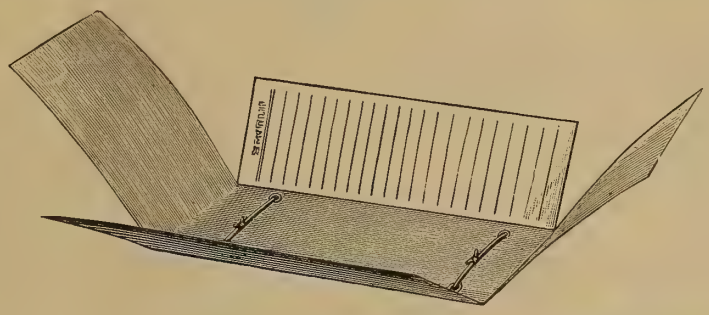
THE LATEST and THE BEST.

REVERSIBLE DOCUMENT ENVELOPES.



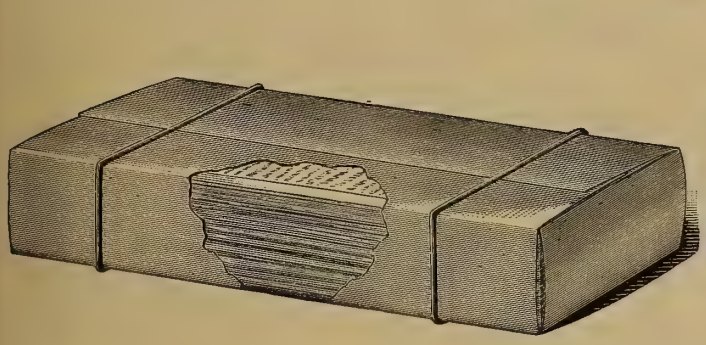
Manufactured by

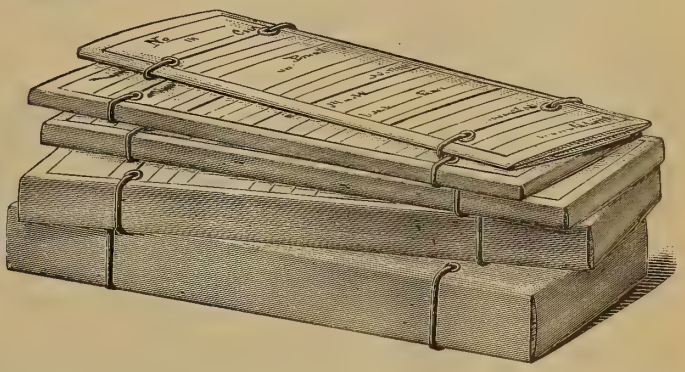
CINCINNATI

Paper Novelty Co.

124 Walnut St.,

CINCINNATI





PATENT

ALLOWED

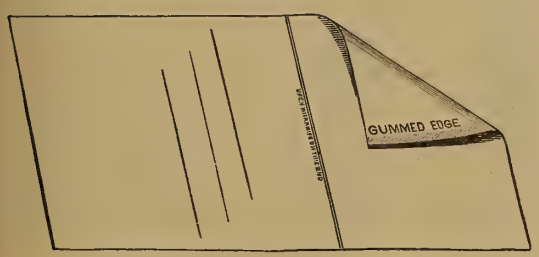
APRIL 28th,

1882.

These Envelopes are made of the very best quality of stock and have the following advantages over all other Document Envelopes.

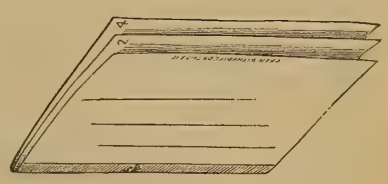
1. ***ADJUSTABLE*** Conforming to the number of papers enclosed, being equally useful for a single document, or a large number as shown above, and will take paper full length of Envelope laying perfectly smooth and flat.

2. ***REVERSIBLE*** Enabling persons to send by mail any documents by reversing the envelope and preserve the endorsemen thereon, the rubber cords passing through and presenting the same appearance on either side.



Approved by all who have used or seen them.

	Size Folded.		Size Folded.
No. 100, Plain	3¾ × 8¾	No. 150, Printed, for Legal Papers,	3¾ × 8¾
" 200, "	4 × 9½	" 250, " " "	4 × 9½
" 300, "	4¾ × 10¼	" 350, " " "	4¾ × 10¼



Envelopes for sending Samples of Merchandise by mail and special sizes made to order.

Prices on application.

NOVELTY PAMPHLET CIRCULAR.

This novelty presents itself to the Advertiser as a new and cheap method for issuing Circulars. The Circulars are put up flat as shown in Cut 1, 500 in box, assorted colors, already gummed. When printed and folded as shown in No. 2, can be sent by mail sealed without an envelope, saving time and expense; when received and opened as in No. 3 makes a six page leaflet already bound, the gummed edge securely binding it. Size flat, 6¼ × 12½, and folded, 6¼ × 4. Other sizes in preparation. Mercantile Stationers and Printers will find a ready demand for this article.

Prices on application.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, JULY 13, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

SOME very interesting reading for the trade will be found in our advertising columns.

GREAT expectations are formed of the coming season's business. It is proper to say that these are founded upon the belief in a good harvest, and in the hope that labor troubles and other disturbing agencies will not bar trade.

ANOTHER fiasco! The envelope trade are out again, and the consociation of which so much was expected proves to have been the usual flatulence. Inasmuch as the plan for allying the manufacturers only went into operation on the 1st inst., the exhibition of failure is mortifying and unpleasant. As to its effects on the trade generally, we have nothing to remark just now; but it is reasonably certain that hereafter every proposition to solidify the envelope trade and all talk about maintaining a uniform scale of prices will be distrusted. The statement is made that the organization of the Standard Envelope Company was proceeding smoothly until it was found that three of the firms had taken "blanket orders," thereby giving certain buyers a privilege in contravention of the spirit, if not the letter, of the agreement. The result has been that some "hard talk" and wrath has been expended and that in accordance with the terms of the agreement three firms have given ten days' notice of their intention to withdraw from the Standard Company. At the expiration of the ten days—July 17—unless some compromise or other arrangement is effected, the manufacturers of envelopes will be selling their goods in competition, and what the effect will be, we leave for them to consider or imagine. This failure is unfortunate. Hereafter, when a union of the envelope trade is proposed, it will be well to inscribe over the entrance to the place of conference, "Ye who enter here, leave hope behind."

WHAT will the harvest be? This is the thought that occupies the commercial mind to-day. There are, of course, pessimists who make themselves unhappy or try to make others miserable for their own purposes of profit, and again there are people who take the other extreme, either from a natural exuberance of feeling or for some gain in exciting undue appreciation of the situation. As between these we have to judge. Our correspondents at the West seem to think that the crops are all right and that their promise is good. From the most reliable advices obtainable the winter wheat harvest promises a fair aggregate average yield on about the same breadth of land cultivated in the previous year, but the area sown to spring wheat, which comprises nearly one-third of the total wheat crop, was very materially less this season than in 1881, and although this portion of the crop is now doing fairly well, it is several weeks later than in an ordinary season, and is still in question. Except in the more southerly districts of the winter wheat States, the threshing test has yet to be applied, and if no disaster overtakes the crop during the harvesting period, it may, no doubt, be assumed with safety that in quantity and quality the American wheat crop of 1882 will prove a good one. While it may be said that the prospect is favorable for wheat, it must at the same time be admitted that the season has been every way very unkind to the maize plant, and it is possible that there may be this year another large deficiency in this, by all odds, the most important cereal crop grown on our soil. It would be much better if we could have a fair maize crop and a largely deficient wheat crop. The oat crop is, without doubt, to be the largest ever reaped in America, the acreage having been very largely increased and the yield very generally bountiful. With regard to the minor cereals, such as rye, barley, &c., they all promise to yield a good return. The prospects, therefore, may be regarded as reasonably fair, and if the ensuing few weeks, so important to the growth of corn, shall be all that is necessary for producing a good yield, there would seem to be no good reason why the hopes of a good fall trade and ensuing prosperous year shall not be fulfilled.

CHATTEL MORTGAGES.

An important sale of autographs from the collections of B. Fillon Potier, &c., took place on May 31, at the Hotel Drouet, Paris. An interesting letter of Jean Jacques Rousseau to the Marquise de Crequy sold for 2,110 francs; a collection of 267 documents relative to the mar-

riage of Louis XV. and Marie Luzinska, 1,300 francs ; 38 autograph articles of Lammennais, 200 francs ; a manuscript of Bernardin de Saint-Pierre, the plan of "L'Amazone," a work never executed, 300 francs ; order of arrest of André Chenier, 210 francs ; a letter of Voltaire to the Prince Galitzin, 220 francs. Owing to the Paris season being near its end, the prices obtained were comparatively low. In the sale of the collection of a Russian amateur on the previous Thursday, an unpublished manuscript of Prosper Merimée, "La Bataille," a story written when the author was twenty-one, was sold for 1,000 francs. The original manuscript of Georges Sand's "Meunier d'Angibault," 582 pages, 2,000 francs. Fourteen letters of the infamous Marquis de Sade were sold for 700 francs.

ANSWERS TO CORRESPONDENTS.

A. C.—Wants to know what number of THE STATIONER contained a receipt for ebonizing wood. He has mislaid the paper.

Ans.—You will find a receipt for ebonizing wood in THE STATIONER, November 3, 1881, and December 29, 1881.

E. H. B.—Wants names of principal manufacturers of butter boxes, paper bags, &c.

Ans.—Robert Gair, 161 Chambers street, New York; D. S. Walton & Co., 129 Franklin street, New York, and Hollingsworth & Whitney Company, 144 Duane steeet, New York, make butter boxes and special bags. Flour sacks and paper bags generally are made by such firms as Arkells & Smith, Canajoharie, N. Y.; Union Bag and Paper Company, Chicago; Chatfield & Woods, Cincinnati. There are many other manufacturers than those named, but these may serve your purpose.

THE LONDON DAILY TELEGRAPH.

On Wednesday evening, June 28, the proprietors of the *Daily Telegraph* celebrated the opening of the new premises which they have lately erected in Fleet street, London, by holding a conversazione, at which the visitors were enabled to witness the whole of the interesting processes involved in what we may term the "manufacture" of a daily paper. H. R. H. the Prince of Wales and H. R. H. Prince Leopold were present on the occasion, and there was an exceedingly large attendance of visitors, many of whom stopped until a very late hour in order to witness the printing of the Thursday morning edition. The new premises, which have an imposing elevation and occupy a large area, are to be devotod to the editorial and advertising departments of the paper, and they have been erected from the designs of Mr. Arding, of the firm of Arding, Bond & Buzzard, the contractor being Mr. Hearn. The accommodation afforded by the new offices is admirable, and the decorations throughout are exceedingly handsome, and are in excellent keeping with the general design. On Wednesday evening the entrance hall and corridors were most tastefully decorated with flowers, and together with the main office on the ground floor, were illuminated by the Fyfe-Main electric light. The royal party arrived about 2 o'clock, when they were received by Mr. E. L. Lawson and Mrs. Lawson, and after partaking of supper, which was served in the library, they proceeded to visit the printing department, which is in the rear of the new premises. The machine room was first visited, the printing of the regular daily edition being then in progress. The *Daily Telegraph* is printed on ten of Hoe's rotary web-perfecting machines, which are run at a speed of 13,800 per hour, each machine producing 230 perfect papers per minute. With the machines at work, therefore, the copies are printed at the rate of 2,300 per minute, the aggregate length of the papers produced in a minute being thus nearly two miles. The average quantity of paper used each day is about sixteen tons, and a ton of paper is printed in about six minutes. The whole of the paper used is manufactured by the proprietors of the *Daily Telegraph* at their mills near Dartford, and is supplied in the form of rolls containing a continuous sheet about three miles in length, this continuous web of paper being cut by the printing machines after it has received the impression. Of the ten machines one delivers the papers folded, while there is also a smaller web machine employed for printing the contents bill at the rate of 200 per minute. The machinery is driven by a pair of Corliss engines with 18-inch cylinders and 3 feet stroke, capable of indicating 300 horse-power, and indicating in ordinary work 190 horse-power. A duplicate engine with cylinder 22 inches in diameter and 24-inch stroke is also provided, this engine having its crankshaft coupled direct to the main line of shafting which runs under the machine-room. Steam is supplied by three large locomotive boilers, of which two are in use at one time, these boilers being made for working at a pressure of 100 pounds. After examining the printing machinery and the machines by which the rolls of paper are damped prior to printing, the visitors were conducted by Mr. Lawson to the composing-room, and thence to the foundry, where the processes of molding the forms of type and casting the stereotype plates were shown. The various operations were examined by the royal visitors with evident interest, and the whole conversazione was a thorough success in every way.—*Engineering.*

GILDING ON WOOD.

To gild in oil, the wood, after being properly smoothed, is covered with a coat of gold size, made of drying linseed oil mixed with yellow ochre. When this has become so dry as to adhere to the fingers without soiling them, the gold leaf is laid on with great care and dexterity, and pressed down with cotton wool.

Places that have been missed are covered with small pieces of gold leaf, and when the whole is dry the ragged bits are rubbed off with cotton. This is by far the easiest mode of gilding. Any other metallic leaves may be applied in a similar manner. Pale leaf gold has a greenish-yellow color, and is an alloy of gold with silver. Dutch gold leaf is only copper colored with the fumes of zinc. Being much cheaper than gold leaf, it is very useful when large quantities of gilding are required in places where it can be defended from the weather, as it changes color if exposed to moisture ; and it should be covered with varnish. Silver leaf is prepared like gold leaf, but when applied should be kept well covered with varnish, as otherwise it will tarnish. A transparent yellow varnish will give it the appearance of gold—*Work Manual No.* 3.

SHADES AND SHADE DECORATION.

Probably nothing will ever be offered the trade in shade goods which so universally fills the popular demand as Hollands, so completely do they soften the light and so durable are their wearing properties. Of late years, however, a great demand has arisen for painted paper shades, which for appearance are very desirable.

The colorings and designs which can be applied to paper are unlimited, and the artist's scope is unbounded by conventionalities. The plain dado, which was adopted a short while back as a fanciful ornamentation for the window shade, is now succeeded by hand-made sketches. During the past few years, decorative efforts in every style of shade goods have not been wanting, and in some goods, twining vines are carried up over the sides and tops of the shades. Transparencies also have been introduced, which show pleasing effects from outside as well as inside the house.

The silk shade, although expensive and easily disordered, is becoming more and more used in rich decoration. It is gathered in folds across the window, two or more cords passing through the folds to a slat at the bottom, and when these cords are drawn up the curtain is gathered—shirred. Something embodying the same principle has been offered the trade in times past, by which the curtain is drawn to the right or left, or up or down, by means of enough cords and pulleys to regulate a full-rigged ship. The object of this idea was excellent, as by it one could shut off the sun from whichever corner of the window it was entering, without shutting out at the same time, as is now often the case, a great deal of desirable light.—*Furniture Gazette.*

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, July 12, 1882.

THE MONEY MARKET.—Money continues easy and abundant, but as there is a considerable absorption of funds in the interior for the purpose of moving the crops, there is no very great plethora of money shown by the weekly bank statement; nevertheless, money has been easily available at about 2½ per cent. The stock market has generally ruled strong and buoyant, with a further gain in prices. The bombardment of Alexandria had a favorable influence, and stimulated the upward movement. Government bonds were firm except for the 4s, which declined ¼. Railroad bonds were only moderately active, but generally strong. The market for foreign exchange was fairly active and about steady. Security and commercial bills were not in free supply, except the latter for future delivery, and these were freely offered at rates much below current figures.

THE PAPER MARKET.—The paper market has developed no new feature since last week. Business with the city trade has been somewhat interrupted by the excessive heat, which has driven quite a number of the trade out of town, the effect being to reduce business to midsummer proportions. Values have not shown indications of any further decline, and while manillas are somewhat irregular and low prices are named for desirable orders, the feeling is steady throughout, with the opinion freely expressed that prices are about as low as they are likely to be this summer. We hear of an order being placed for 75 tons of extra machine-finished book paper at about 8c.

THE STATIONERY MARKET.—While no positive improvement in the condition of the market has taken place since last week, the general feeling is, and this is supported by many indications, that a reaction is close at hand, and that within the next fortnight the fall season will be fairly opened. Buyers are beginning to come in from the South, West and Northwest, but many of them go to the seaside or other summer resorts near the city soon after arriving here, to avoid the heat, and are buying very little as yet, but it will not be very long before the employees will be kept "on the jump" until the small hours of the morning, filling orders. While in some special lines there may be some disappointment experienced as to the takings of buyers to fill up their stocks, the feeling is quite general that the largest fall business will be done that the trade has yet experienced, the only possible set back being the labor strikes, which, it is thought, will be soon adjusted. In the line of staples the effect of the failure of the envelope combination will be a continuation of the cutting of prices to such an extent that some grades will be sold, it is said, below the cost of their manufacture.

SPECIALTIES FOR THE STATIONERY TRADE.

Autograph Albums, Autograph Selections, Children's Scrap Albums, Eclipse Pencil Tablets, Eclipse Writing Tablets.

CHAS. M. COTT & CO., Manufacturing Stationers, COLUMBUS, O.

THE COMMON SCHOOL AUTOGRAPH ALBUM.

SOLD ON VERY LARGE DISCOUNTS TO THE TRADE.

☞ **Don't fail to send in your order at once.**

Samples, with Circulars and Price Lists, mailed free on receipt of retail price.

A BLOTTER,

Where you want it, When you want it, As you want it.

COTT'S PATENT

IMPROVED TABLET BLOTTER.

Patented 1878, 1879 and 1882.

LATELY IMPROVED AND PERFECTED.

A Cheap, Convenient, Practical, Ready-made Blotter Cover, for putting up Printed Stationery in Tablet Form. Already in use in hundreds of Printing Offices. Pronounced the **"BEST OUT."**

No special preparation or skill required to be able to furnish these Blotters to your customers. I furnish the Blotters ready for use, and with calendar for year neatly printed, with convenient space left for insertion of card by printer using them. I also furnish straw-boards, cut to the proper sizes, strong manilla paper for edging, cut to sizes required, and the wire staples for attaching blotter to block.

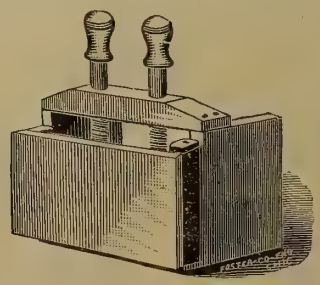
The blotter is so arranged that it is detachable from the block, and can be reversed and put on again, thereby making both sides of the cover serviceable for blotting purpose. One half dozen blotters will ordinarily put up 1,000 sheets of paper ; the additional cost, therefore, of using my blotter will be from **20** to **25** cents on an order of 1,000 Note, Letter Heads and so forth.

I shall keep constantly manufactured and on hand a large supply of these blotters. They will be sold at the following prices, which includes straw-board, manilla paper and staples, with calendar printed on blotter.

Letter Heads	Size 8½ x 11	per doz.,	60c.
"	" 8 x 10½	"	55c.
"	" 8 x 10	"	50c.
Packet Note Heads	" 6 x 9½	"	45c.
Folio Note Heads and Statements.	" 5½ x 8½	"	40c.
Half-Sheet Bill Heads	" 8½ x 14	"	70c.
Fourth-Sheet "	" 8½ x 7	"	48c.
Sixth-Sheet "	" 8½ x 4¾	"	40c.

ADVANTAGES IN USING MY PATENT TABLET BLOTTER:

(1.) It will please your customers.
(2.) It will increase your business.
(3.) It will bring customers back again when they want more work.
(4.) It is a constant advertisement for your office.
(5.) It shows you have enterprise and a desire to supply the wants of your patrons.
(6.) It is cheap, simple and convenient.



A NECESSARY ARTICLE FOR EVERY PRINTING OFFICE.

The Making of Paper into Tablets Made Easy !

C. M. COTT'S PATENT

PACKING and PRESSING BOX.

For Straightening Up and Holding the Paper in Shape while Gluing the Edge for Tablets. Price, **$2.25.**

It consists of a box large enough to hold 1,000 sheets letter or bill head paper tightly. The paper is first placed in the box and straightened, it is then tightly clamped by means of hand screws, when the end of the box is removed, leaving the edge exposed ready for gluing. This cheap and simple contrivance renders the work of blocking up paper for tablets very easily and conveniently done, requiring no trouble in straightening the sheets or placing them in position, does away with weights and enables any one about the office to make them neatly and quickly.

READY PREPARED GLUE.

A most excellent article, saves the expense of buying a glue pot, and the annoyance of heating glue, and it has the advantage of always being ready for use. Cheapest and best article you can use.

One-half Pint Bottles, each 45 cts.
One Pint Cans, each.....75 cts.

Orders of $5.00 and over, accompanied with the cash, 5 per cent. discount ; $10.00 and over, 10 per cent. discount.

CHRISTMAS SOUVENIRS.—"Messrs. John Walker & Co. have struck out for themselves a new line in Christmas Cards, radically different from anything yet shown. We are forced to allude to the goods as "Christmas Cards," but they bear about the same relation to cards as a gold watch does to a German-silver toothpick. The souvenirs are beautiful miniatures on ivory, single, or in sets of two, three or four, enclosed in sumptuous cases of satin, velvet or morocco, a little in the nature of photograph albums, but very little like anything that has ever before been offered to the trade. Prices are from five shillings to five guineas. The oft-repeated question, "What shall I do with it?" will never be asked by the fortunate receivers of these souvenirs. They are of substantial size, great richness, and obvious worth as productions of art. Retail stationers who have or can make a market for these superb goods will have the satisfaction of knowing that the most severely critical of their customers can have no fault to find, and that they are offering something which will do credit to their own good taste."—*Stationery Trades Journal.*

In rich flint glass bottles, of various sizes, with cork or ground glass stoppers.

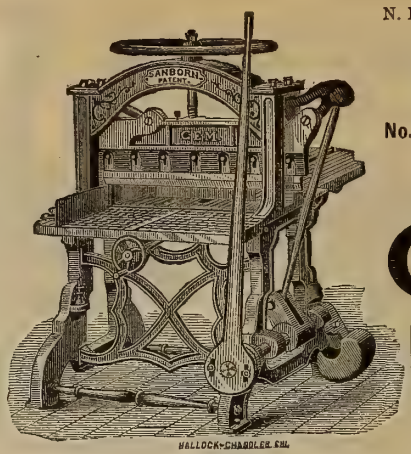
In rich flint glass bottles, of various sizes, with cork or ground glass stoppers.

An improved nut gall ink, put up in cones, 4 oz., 8 oz., pint and quart bottles; also, in half-gallon and gallon stone jugs, and sold on draught.

Is acknowledged to be the best ever produced. It is put up in 8 oz., pint and quart stone bottles, and 2 oz. cone glass bottles; also, in half-gallon and gallon stone jugs, and sold on draught.

The most permanent violet ink made. Put up in cones' 4 oz., 8 oz., pint and quart bottles; also, in half-gallon and gallon stone jugs, and sold on draught.

ENLARGED STEREOSCOPES.



In the *Laterna Magica*, Dr. Liesegang, writing of stereoscopes, refers to Claudet's monster stereoscope, and says the latter possessed over the ordinary stereoscope the great advantages that one had not to strain the eyes to view the picture, and that several persons could see the picture at the same time, and with the improved lantern appliances of to-day a much better result might be expected than was obtainable with Claudet's instrument. It ought to be enough to place the two halves of a stereoscopic transparency, each in a sciopticon, and to project both pictures upon a matte glass so that they cover each other. Absolute coincidence is, however, impossible, as the two pictures are not exactly alike, their central points being separated in the two halves of the stereoscopic picture by a distance rather greater than that between the average human eyes, and an idea of Almeida's comes in. The two halves of a stereoscopic transparency projected as directed above upon the wall produces an indistinct image, the two pictures not being identical, so Dr. Liesegang would push a red glass in front of one side in the lantern and a green one in front of the other. The observer would then put on a pair of spectacles having a red and a green glass, and would only see the green picture through the green eye of the spectacle and the red picture with the other. Almeida maintains that by this means the relief is very well brought out, particularly if the observer bend sideways toward the wall.

THE MICROPHONE AND SOUNDING PIPES.

An interesting application of the microphone to the determination of the position of nodes and ventral segments or bellies, in columns of vibrating air has been made by M. J. Lerra-Carpi, and communicated by him to the French Academy of Sciences. The microphone is mounted on an elastic membrane stretched over a little drum, and then lowered into the sounding pipe, which in most of M. Lerra-Carpi's experiments was an organ pipe having the fundamental tone do_2. When the apparatus came to a node the telephone in circuit with the microphone gave out a rumbling sound, similar to that caused by an induced current. On the other hand when the microphone passed a belly the sounds became very faint and rare; while at intermediate points they increased or diminished according as the microphonic sounder was brought nearer to a node or belly. While upon this subject we may also mention that M. de Rossi proposes to apply microphones as detectors of fire-damp explosions in mines. He affirms that such explosions are always preceded by undulations too feeble to be detected by the human ear; but that a system of microphones properly planted in the mines would indicate the danger.

CEMENT FOR GLASS.

To make a cement for glass that will resist acids, the following has been recommended: Take 10½ pounds of pulverized stone and glass, and mix with it 4¾ pounds of sulphur. Subject the mixture to such a moderate degree of heat that the sulphur melts. Stir until the whole becomes homogeneous, and then run it into molds. When required for use it is to be heated to 248°, at which temperature it melts, and may be employed in the usual manner. This, it is said, resists the action of acids, never changes in the air, and is not effected in boiling water. At 230° it is said to be as hard as stone.

The cut is a facsimile of the Improved SANBORN GEM.

Send for Illustrated Catalogue of our other Cutters and Bookbinders', Printers' and Paper-Box Makers' Machinery.

N. B.—All persons are hereby cautioned against Buying, Selling, or Using Machines, either Lever or Wheel, infringing on our Patents.

HAVE LATELY PUBLISHED:

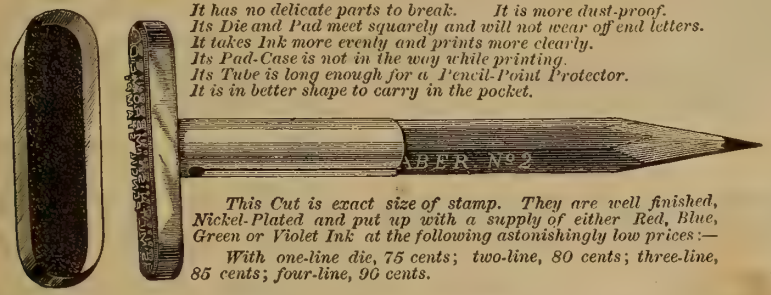
THE "AVON" EDITION

THE COMPLETE WORKS OF

WILLIAM SHAKESPEARE.

In issuing "THE AVON SHAKESPEARE" the publishers claim for it very great superiority over any OCTAVO Edition heretofore published; and for the following reasons:

Purity and Accuracy of the Text. The Large and Clear Type.
The Plot of the Play. Elegance of Illustration.
A Graphic Life of Shakespeare. Alphabetical Index of the Characters.
Index to Familiar Passages. A Glossarial Index of Terms.



Imperial 8vo., 996 pp., 24 Illustrations. Cloth, $3.00. Sheep, $3.50. Cloth Gilt, $3.75. Turkey Antique, $8.00.

Orders for Books in every department of Literature, Staple and Fancy Stationery, Blank Books, Paper, Envelopes, &c., filled promptly at the lowest market rates.

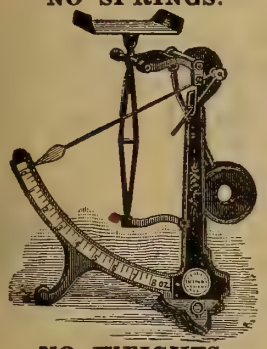
SMITH'S IMPROVED PENCIL STAMP.

MORE SIMPLE! MORE PRACTICAL! MORE DURABLE! than any other Pencil Stamp yet produced, for the following reasons:

It has no delicate parts to break. It is more dust-proof.
Its Die and Pad meet squarely and will not wear off end letters.
It takes Ink more evenly and prints more clearly.
Its Pad-Case is not in the way while printing.
Its Tube is long enough for a Pencil-Point Protector.
It is in better shape to carry in the pocket.

This Cut is exact size of stamp. They are well finished, Nickel-Plated and put up with a supply of either Red, Blue, Green or Violet Ink at the following astonishingly low prices:—

With one-line die, 75 cents; two-line, 80 cents; three-line, 85 cents; four-line, 90 cents.



Large size, either with Tube or Folding Handle, with one-line die, $1.00; two-line, $1.25; three-line, $1.50; four-line, $1.75. Send for Circular to

THE CHRONOMETRIC SHUTTER.

The extension of the so-called instantaneous process in photographs and the use of gelatine-bromide of silver plates renders it more and more necessary to have a means of regulating with great exactness the time of exposure of the sensitive plate in taking a photograph; and a chronometric shutter for this purpose has been devised by Paul Boca. The new appliance is readily fitted to existing cameras of all sizes, and allows the lower parts of a plate to be exposed for a longer time to the light than the upper parts, a condition which is necessary in photographing a landscape in order to get a good picture. It consists of a small box which is fixed upon the front of the dark chamber, so as to interpose it between that chamber and the object glass. The box incloses two metal shutters kept vertically, one before the other, by means of springs which tend to lower one and raise the other. A chronometric counter is placed upon the front of the box, and shows its dial under the object glass. The dial has a needle or hand which is set to the division corresponding to the desired time of exposure. In being set the hand catches the two shutters and holds them fixed, the first so as to blind the object glass, the other so as to be ready to rise and do this also. The fall of the shutter now blinding the camera is occasioned by pressing a small rubber squirt, which sends a pulse of air along a flexible pipe connected with the dial, and thus liberates the hand, and also the catch of the first dial, which thereupon falls and allows the plate to be exposed. During this exposure the hand is moving back to zero, and when it arrives there it frees the second shutter, which promptly rises and blinds the glass. Thus the interval of exposure is the period between the descent of the first shutter and the ascent of the second. It can be regulated by the dial to one-fiftieth of a second.

A HOUSE WITH WALLS OF DIAMONDS.

It was of a house at Bultfontein that a colonial paper solemnly declared the walls to be set with diamonds. How they laughed at home! But the statement was untrue only in the sense that it was foolishly exaggerated. One Sunday W. asked some friends to breakfast—a wretched, greasy feed enough, but delicious to those poor fellows, for some of whom no feast had flavor or variety but a few months before. The meal finished, one of them strolled restlessly about the little room. Quick and suspicious eyes were there. The whole party rose on a sudden, threw their comrade across the table, and tormented him until he hysterically owned the finding of four diamonds in the plaster. They forthwith stripped the walls, heedless of expostulation. Nine more were discovered; and so effectual was the search that none have been discovered since to W.'s knowledge. Some time afterward he resolved to dig a cellar, and speculators eagerly bid for the contract; if stray diamonds were found sticking in the house-wall, there must be a new Golconda in the soil beneath. The successful competitor executed W.'s ideas, and paid him a large amount for the earth removed. But he found not a single stone. Such surprises, such disappointments were common on the fields at that time. My shrewd host perceived that the plaster had not been made at Bultfontein, where there is no water, and he rightly judged that diamonds therein did not prove diamonds below the foundations.—*Belgravia.*

The desire of being pleasant is universal. The desire of pleasing should be so too.

STILL ANOTHER IMPROVEMENT IN

(PATENT PENDING.)

ROLLER BACKING MACHINES.

By the use of our new Improved Roller Backer you can back a LARGE or SMALL quantity of books, of different sizes, as the Roller is adjusted by turning the handle on right, which runs the steel-cut beveled gears, and carries the Roller up or down very rapid and true every time, for any thickness of books, the first time, thereby saving great time and labor. There is no strain on the thread that carries the Roller. This is the only Roller Backer made which can be adjusted for a few books without a great deal of time and trouble.

This machine is built in a very superior manner, with steel connections, and the holes are reamed out; steel jaws, and made extra heavy for hard work. It has a triple spring for rest on back, to prevent the jar of the whole body in running the Roller clear back. This machine is pronounced, where in use, to be the strongest and quickest adjusted machine ever made. Can be adjusted from a 4-inch book to a ¼-inch book instantly, ready to make a TRUE BACK without loss of time, and the workman cannot but make a true back on every book.

Length of Jaw, 18 inches. Price, $325.

WEDGWOOD JASPER WARE.

There are certain forms of ware or styles of decoration that are a constant temptation to purchase. It makes no difference how many specimens of the same grade or variety may already adorn your cabinet or mantel, every new shape or slight change of ornamentation produces an irresistible desire to become the possessor of the coveted article. This great attraction takes a different form for each—one enjoys a variety that is to another without beauty or attractiveness, as tastes differ the world over. To us the bright particular star that is always our special admiration is Wedgwood's jasper ware, and too frequently the temptation is yielded to when the pocket-book forbids the indulgence. Anything more exquisitely beautiful in its chaste simplicity than this it is hard to imagine, and the difficulty we have experienced in obtaining information regarding its character and manufacture leads us to infer that it may not be so generally known as to make repetition in our columns wearisome or unprofitable.

Jasper, terra-cotta, basalt, granite, agate and porphyry wares are all special varieties of one branch of the general division of pottery named stoneware. The divisions of stoneware (so-called from its hardness, which is next in degree to hard porcelain) are fine and ordinary, and it is to the first or fine stoneware that the several varieties named above belong. The names by which they are designated are given them from real or fancied resemblance to the glass or stones whose names they bear and which they are worthy to receive. All these are much alike in material and way of manufacture, differing only in the coloring matter employed in some cases, or some little point of distinction in others. Jasper being the best known, we have selected it as an example of all.

The way of manufacture and preparing the clay are much the same as in porcelain or earthenware, but has a larger proportion of flux than porcelain clay, and is more plastic, being thus beautifully adapted to all subjects to be shown in relief. The body is a pure white color over which is a colored ground of blue, sage or turquoise color. The ornaments appear in white with color for a background, thus producing an effect almost identical with cameo cutting.

After the piece has been molded in a plaster-of-paris mold, exactly as is done in the manufacture of earthenware, the piece is allowed to dry until hard enough to handle, when it is placed upon a lathe and the surface "turned" until even and smooth. The rings or lines which are to appear white are also raised upon the surface at this time.

After being dipped into the glaze, it is again allowed to harden, when it is placed upon the lathe again to burnish or smooth the entire surface, thus producing the regular groundwork of color which is one of the greatest charms of this "gem" of ceramic art. The ornaments and foliage are now to be added, and it is then fired at a degree of heat but little less than that required for porcelain.

The making and fastening to the surface of these beautiful ornaments are among the most delicate operations in the manufacture of pottery. Each figure, group, or design is pressed separately in a mold of plaster-of-paris from very plastic clay, just as an impression of a seal is taken in wax. The workman presses the clay into the mold with a spatula, and by gentle pressure fills all the fine lines cut into the mold, while the plaster absorbs the moisture and a little touch loosens the ornament from the mold. Delicate work is retouched with a sharp tool by hand, and the fine lines are added in the same manner. Flowers and choice designs for expensive pieces of such character as to render the use of a mold impossible, are carved by hand and are actually pieces of sculpture. The handles, &c., are also molded in separate pieces, and fastened to the surface with a little "slip," and the place of union can often be discovered by a careful inspection.

Fine stoneware is not often glazed, but sometimes a spontaneous glaze is produced by a process called "smearing." In this process the inner surface of the seggar is coated with a glaze held in solution in hot water.

These glazes are composed of lead, bone, flint, salt, nitre, potash, and other ingredients, mixed in varying proportions. This preparation is volatilized by the action of the heat of the furnace, and becoming absorbed by the ware, forms a glaze on the surface exposed.

The blue groundwork of Jasper ware is produced by adding oxide of cobalt to the glaze, or oxide of chromium if you desire to obtain the sage-green shade.

The cameo figures almost resemble opal glass, so hard are they fired and so purely white in color.

The most famous specimen of this style of ware is the "Portland Vase," discovered near Rome between the years 1623 and 1644. The vase was of glass, covered with a dark blue coating—so dark as to resemble black—beneath which the body was white or opal. The exterior of color was sculptured into the well-known figures. Perfect reproductions of this work of art are made in Jasper, exact in size, color, and design, and these are among the most beautiful articles made in any country or ware.

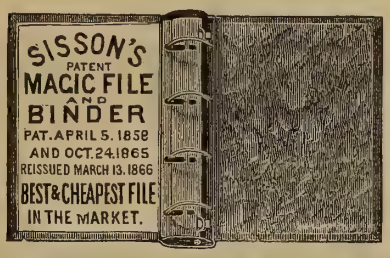
The "Agate" ware is made by placing the different colored clays in layers, and by pressure fastening them to each other, but not mingling them at all.

Basalt, or black Egyptian biscuit, resembles basalt stone, and makes a most unique and beautiful surface, even when not relieved by white or red cameo ornaments. In this ware are made vases with Grecian or Egyptian designs that seem to be genuine antiques, so closely is form, color and decoration copied.

It has always been a source of wonder to us why this rich, handsome ware should not be more generally sold by dealers and used by the consumer. We cannot believe that there is any one, cultured or not, who can fail to perceive its beauties, and the price, although not low, is certainly not so exorbitant as to prevent its ready sale.—*Crockery and Glass Journal.*

A LESSON IN COLORING.

Mr. Morris, in one of his lectures on house decoration, gives the following suggestions as to the tints available for wall decorations: Although, he says, it was a sign of disease in an artist to have a violent objection to a particular color, yet many could only be used in very limited quantities. Yellow, for example, could not be introduced in masses; even when broken up, the color could only be employed in some materials affording a play of light and shade. Primrose and other tints were only fit for use on silks. Reds also were difficult to manage unless the tones were helped by beauty of material. Hot brown reds were very ungrateful to the eye, and the tint now known as magenta could only be introduced to a very small extent in combination. Scarlet and russet were dyers or woolen colors. Pink should in decorations tend rather toward orange. Purple, if introduced at all, should not be bright, and should tend toward russet. Green was not so much used by nature as was generally supposed. The very light tones were only seen for a very short time at the burst of spring, and owed their charm to their tender and transient character. While he would caution his hearers against trying to outdo nature by using too bright a tone, he would equally warn them against the exclusive use of those cold, dull tones which, he was told, he was supposed to have largely brought into vogue. While green was the workaday color, blue was the holiday color, and in these the pure pale tints were the most useful. In decoration, it should be recollected that if you used bold and deep colors, they would tempt you into using deeper and yet deeper colors to harmonize with these, and for this reason he recommended the use of but little yellow, but more freely of deep reds, pale golden pinks, quiet shades of green, and pale blues. Soberness of tones was necessary to gain the moderation required in decorating. A yet worse fault than the use of too vivid colors was to allow all the tints to get dingy and muddy. If his coloring was not pure and clear, a decorator had not learned his business. Next as to the design of pattern which would form the decoration. The first step from a plain tint was to place dark upon light, or light upon dark, of which the first was the best and easiest. Red was the color in which the tones must be nearest to each other; green held a middle place, and in blue they could be most widely separated. If the colors were deep in tone it would try all the decorator's skill, and he would be almost compelled to advance another stage, and to add a third color. Skill would be displayed in obtaining relief of forms, harmonious arrangement, and softness of tones. Superposed colors need not all be upon the same apparent plane, and this gradually led to the separation of color from color by a distinct line of yet another color, which completed the harmony. This method of treatment was almost an art in itself. It was, indeed, the most difficult of all, and might be termed the Oriental mode of working. In Persian work they had at its best this use of colors which interpenetrated. The employment of color for color's sake was not natural to us, and would never take a genuine hold upon our civilized minds. He warned decorators against the abuse of dotting and specking their backgrounds, an error which vulgarized a pattern immediately.



SELF-WINDING CLOCK.

In September last a new perpetual clock was put up at the Gare du Nord, Brussels, in such a position as to be fully exposed to the influence of wind and weather; and although it has not since been touched, it has continued to keep good time ever since. The weight is kept constantly wound up by a fan, placed in a chimney. As soon as it approaches the extreme height of its course, it actuates a brake, which stops the fan; and the greater the tendency of the fan to revolve, so much the more strongly does the brake act to prevent it. A simple pawl arrangement prevents a down draught from exerting any effect. There is no necessity for a fire, as the natural draft of a chimney or pipe is sufficient; and if the clock is placed out of doors all that is required is to place above it a pipe 16 or 20 feet high. The clock is usually made to work for twenty-four hours after being wound up, so as to provide for any temporary stoppage; but, by the addition of a wheel or two, it may be made to go for eight days after cessation of winding. The inventor, Auguste Dardenne, a native of Belgium, showed his original model at the Paris Exhibition, 1878, but has since considerably improved upon it.

Blackhall's Patent Improved Machinery For the Manufacturing Stationery Trade.

BLACKHALL'S ECLIPSE POWER PERFORATING MACHINE

Is now in use in most of the leading manufacturing houses in the trade. Its great rapidity for straight or stub work can be judged from the fact that a ream of medium, with one to five lines of perforation, can be finished in from five to seven minutes. It makes a clean, round hole, and will cut from the toughest tissue manilla to heavy card-board. I have just added a device whereby crooked paper or irregularly printed or lithographed sheets can be perforated true and even.

☞ Compare the speed, work and durability with your Table Machines, and you will see it would pay to put in the Power Machine.

WHAT THE TRADE SAY.

THE LATEST.—Levison & Blythe Stationery Co., St. Louis.—In reply to yours of 8th instant we would say that we have had your Power Perforator in constant use for the past two years on all classes of work. We have had no trouble with the machine during this time, and have had to replace but three pins. To-day it is in perfect order, cutting clean and even.

St. Louis, May 26, 1882.

E. W. Blackhall: *Dear Sir*—We have had in use one of your Power Perforating Machines (for about one year), and we have to say it exceeds our expectations, does splendid work, does it rapidly, is easily attended by a small boy, is **durable**, and in fact we could not keep house without it. We cheerfully recommend it to all requiring a first-class machine. Truly yours, Geo. D. Bainard & Co.

Courier Journal, Louisville, Ky.—We would not do without it if we had to pay double the price we paid you.

Barnes, Bancroft & Co., San Francisco.—Your Perforator gives every satisfaction.

Boorum & Pease, New York.—Our perforated work costs almost nothing when considered by the ream. We are well pleased with it.

BLACKHALL'S DOUBLE STRIKER COMBINATION.

This simple arrangement will do **twice** the work of an ordinary striker, and for **one-head** or stock work, it will lap the head and run the down lines as fast as faint, without striking. It will also work from one to five patterns at once, by hand or power. Send for Circulars, &c.

BLACKHALL'S RULING ATTACHMENT.

Can be applied to any sort of striker, and will give twice the usual results for same labor, saving from fifty to seventy-five per cent.

—OPINIONS.—

Hugh R. Hildreth Printing Co., St. Louis, on Hickok's Striker.—It has saved us time and money; we have every reason to be satisfied.

Brown Brothers, Toronto, Canada, on Hickok's Striker.—One machine, with attachment, does work of two without it.

Beatty & Stevenson, New York, on Gouptill's Striker.—Easily adjusted, perfect accuracy, indispensable; send us another.

Geo. D. Barnard, St. Louis, on Collins' Striker.—It does all you claim; it effects a saving of one hundred per cent.

The foregoing are a few of many letters of similar import. I would also call attention to my SLIDING PEN LIFTER, GUIDE PIECE, DROP SCREW SELF-FEEDER, NEW STYLE RULING MACHINE, &c., &c. ☞ Send for Circulars, containing full details and illustrations, to

AN ENGLISH TRADE GATHERING.

The forty-second anniversary of the Stationers' and Paper Manufacturers' Provident Society, London, was held on Friday, June 23, at the Albion Hotel, Aldersgate street, E. C., when there was a goodly gathering of the trade. Following is a report of the proceedings from *Paper Making:*

It may be well to define the objects of this society. The main purpose is the establishment of a permanent fund for the assistance of members when in distressed circumstances, and for the relief of the widows and orphans of members. One great advantage of this society is its economical management, whereby large sums are yearly distributed among the needy. When can we so appreciate comfort as in our declining years, when perhaps a little timely aid is the means of prolonging life and making the last lingering burden more easy to bear? This the society does and has done, and it is our duty, each and all of us, to support so good an undertaking.

And now is the time to act. While youth with all its resources can enable men to earn the most, it behooves them to lay by a store that shall avail when the decay of old age creeps upon them. This society offers to young members of the trade a certainty, not a mere speculation. A business-like committee manage the affairs and decide upon all matters with impartiality and judgment. There is no favoritism, but the one grand object of the society can be expressed in these words: "Young men, be provident and be careful, and we will help you."

It is not our intention to go into details. All we wish to impress upon the trade is the genuine character of this society, and to remove all idea that it is founded upon what are known as "benefit" principles. For all further information and rules of the society intending members must apply to the honorary secretary, F. West, 66 Cannon street, who takes a pleasure in forwarding the interests of the society in any way he can, and who will give all details needful.

With this brief introduction we pass on to the dinner given on the evening of the 23d ult., at the Albion, and which was tolerably well attended. The chair was well and ably filled by Col. George McCorquodale, High Sheriff of Lancashire, who was supported by G. F. McCorquodale, J. Wighton, A. C. McCorquodale, D. Culross, G. W. Smythe, T. C. Bockenham, George Chater, Sr., C. Millington, Frank Green, C. L. and W. S. Millington, &c. We also observed Herbert Adams (Charles Morgan & Co.), Dr. Lomas, Benjamin Brown, Riddle (Riddle & Couchman), Newling (Clements & Newling), Joseph Dewick, George Chater, Jr., T. A. Hodgkinson, M. T. Roe (Dixon & Roe), A. Rutt (Grosvenor, Chater & Co.), Mr. Watson (A. Cowan & Sons), G. F. Busbridge, F. Monckton, C. S. Smith, J. Haines, Jr. (T. H. Saunders & Co.), C. Grimwade, H. Green, S. Green, Moody (Drake, Driver & Leaver, Pollock, Nicholls (John Dickinson & Co.), Howard Lockwood (New York), T. Archer, W. F. Catcheside, &c., &c.

A good menu was provided, and C. Steadman provided capital music, which frequently excited the enthusiasm of the audience. Shortly after grace had been sung, the chairman in felicitous terms proposed the Royal toasts, which were as usual, and especially among our trade, warmly received. In proposing the "Army, Navy and Volunteers," the chairman remarked that should the latter force ever be wanted to take active service, he felt sure they would fight as well as all English soldiers.

In reply to this toast, Mr. G. F. McCorquodale mentioned the fact of his having commanded a corps formed entirely of the trade in Liverpool, and also expressed his opinion that the volunteers would be willing and proud, should occasion call for it, to fight for their Queen and country. (Cheers.)

The Chairman then gave the toast of the evening, "Prosperity to the Stationers and Paper Manufacturers' Provident Society." He remarked "that the Society was founded in 1840. But what changes had taken place since then! At that time the stationery trade was quite an insignificant trade. I remember the time when a stationer in London was esteemed a very great man if he turned over from £4,000 to £5,000 per month. His business was thought to be a very tidy concern. But now, how many did this and even quadrupled, and more than this sum. (Hear.) I attribute all these wonderful changes to several causes. Perhaps the general prosperity of the country had had very much to do with it. The removal of the duty upon paper had also effected much. The removal of the stamp and advertisement duty had greatly facilitated the spread of newspapers. I remember many years ago seeing an extraordinary thing in Glasgow. I was in the *Courier* office there and some one came into the office for a copy. There was not a copy left, but the customer was asked to wait, and the office clerk just went upstairs and pulled a proof copy and brought it down quite wet for his customer. (Laughter.) Another great matter was the working of the penny postage scheme, and I need not remind you that only on Saturday last H.R.H. the Prince of Wales unveiled a statue to Sir Rowland Hill. (Cheers.) The penny postage had effected marvelous changes. I remember when there used to be some difficulty in seeing a newspaper in the country. It went round and round for everybody to get a look at. Now look at the fact of getting a newspaper every morning by post. I also remember, many years ago, I was traveling on the Newcastle and Carlisle Railway, with a commercial traveler, just after the introduction of the penny postage, and showed him a letter I was sending to my principals. He said, "Surely, you don't think that anybody will pay for that letter." You must know that then receivers paid the postage, whereas now the senders always pay. I can also distinctly recollect the introduction of envelopes. A Scotchman was once in Edinburgh with me and refused to buy envelopes, as they were too dear. Their price then was 8d. a dozen. (Laughter.) There can be no doubt that the penny postage system has greatly excited the manufacture of paper. Formerly it took about three weeks to make paper. I might now say that if the grass or straw was used on Monday, you might actually print the paper itself on the Wednesday following.

"But, gentlemen, I must not forget the toast especially before us. This society, I must tell you, is to encourage provident habits and induce thrift. We all agree with the advisability of these habits. This society helps those who help themselves and gives relief to those who need it. This society has lightened the cares of many distressed people, who otherwise would have felt the sting and pain of poverty. Nobody could tell what might befall him, and it was his duty, therefore, to provide against a rainy day. I strongly commend this society to your notice. Help it by every means. Let it be our duty then to encourage this society and to impress upon the younger members of the trade to be provident while the advantages of youth enable them to do so."

The gallant chairman then proposed the toast amid prolonged cheering, and coupled with it the name of the president, George Chater.

George Chater, who was received with tremendous cheering, said: "Nothing gives me greater pleasure than going hand and glove with the trade. I think the chairman said that he was sure the society was pleased to see strangers and provincial members. I think I might say if our worthy chairman was a specimen of 'a young man from the country,' the society would be indeed pleased to see country visitors. I look upon these gatherings of the trade not only as advantageous to the ends of the society, but I consider these meetings help to cement good friendship. Competition is keen, and we may meet here to dine to-night and to-morrow may be business antagonists. These dinners and gatherings and the common object we all have at heart serve to let us know more of each other, and we may say: 'Well, we are not such bad fellows after all.'"

Mr. Chater then proposed the health of the chairman, and remarked upon the progress he had made, alluding specially to the official position Col. McCorquodale now held as High Sheriff of Lancashire.

The toast was well received with musical honors. The chairman in the course of his reply made some laughable allusions to his duties as High Sheriff. He reminded his audience that, among other onerous duties, he would, if no suitable person could be found, have to undertake the office of hangman. He had since his appointment received a letter applying for the situation of hangman, in which the applicant stated his ability to perform his duties, that he could furnish good references, and indeed would be very pleased to undertake the job. But he (the chairman) did not know but what it was a duty, when he had such a valuable appointment within his province, to reserve it for a friend. (Roars of laughter.) He also had received many offers of loans on his personal security, and altogether he thought the office of High Sheriff possessed substantial advantages. He thanked them for the kind reception of his name, and although he was too old to join the society himself he had enrolled his son as a life member. (Cheers.)

Mr. Watson then proposed the "Vice Presidents, Treasurer, Trustees, Auditors and Committee of Management of the Society." Mr. Watson referred to the excellent capacity of these officers, their zeal and the good effect of their services. He thought that giving their time and attention to the benefit of the society entitled them to the heartfelt thanks of all. (Cheers.)

He begged to couple with the toast the name of Henry Green, to whose perseverance and ability the committee actually was indebted in a great measure.

Henry Green, who was very warmly received, said that he was the youngest member of the committee, and he only now spoke as a substitute for one whose name was held in veneration and affection by them all, viz., Charles Grimwade, who was the founder of the society. (Loud cheers.) He thought the committee suffered from too much rest and he had made up his mind to put a little awakening power into them. The society wanted more members. They had a tolerably good purse and did not actually beg for money, although they always took what was offered them. They would like to see more joining members. He need scarcely point out the great benefit and pleasure derivable from a sure prospect of relief, should any unforeseen affliction overtake them. He ap-

proved of these gatherings as a means of coming together and he hoped also as a means of getting the objects of the society more widely known. He thanked them all for the kind expression of their appreciation of the committee's services. (Cheers.)

The chairman now called upon F. West, the honorable secretary, to make his statement. Mr. West said that so far the donations of the evening had been quite up to the average of past years, and that there had been a gain of strength in members. He was happy to announce a list sum of about £200 donations, which included sums from 10 guineas downwards, from firms of well-known standing. Mr. West thought the prospects of the society were as good as could be expected, and altogether congratulated the society upon the cheerful character of the statement it was his pleasure to make.

The next toast was "The Stationers and Paper Manufacturers of Great Britain and Ireland," proposed by Frank Green, who remarked that he thought no more important toast had been or could be given. What would they all do without the paper makers? Yet he was very pleased to see by the programme that stationers were put before paper makers. Paper makers had to make the paper, and stationers then had to sell it. But joking apart, he hoped ever to see the toast a combined one, inasmuch as unity is strength, and he trusted that a feeling of unity might always exist between stationers and paper makers, and that the two interests might ever be merged into one. (Cheers.) He coupled with the toast the name of Herbert Adams, of Chas. Morgan & Co.

Mr. Adams, on behalf of the allied trades, returned thanks for the way in which the toast had been received. He thought that perhaps the stationers were put first on the programme because they founded the society and then they took the paper makers in. ("Hear! hear!" and laughter.) He said he was no speaker and would not trouble the audience with any speech at that late hour.

The Chairman said that he wished to add a special toast, as he understood a gentleman was present from America, and he was quite sure that all were glad to offer him a cordial welcome. (Cheers.) He said that it was a well-known fact that no English paper maker was refused admittance to an American mill and that every facility was offered by the United States paper makers to their Great Britain fellow paper makers to see everything. He understood that a member of the American trade was present and he had much pleasure in offering him welcome and proposing his health. He gave the health of Howard Lockwood, of New York. (Cheers.)

Upon rising to reply, Mr. Lockwood was warmly cheered. He remarked that he felt very much embarrassed as this was quite an unexpected honor to him. He thought he was indebted to a friend on his left (G. F. Busbridge) for this and would settle up with him presently. (Laughter.) He was further embarrassed by the chairman referring to him as a member of the paper trade of New York, which was scarcely correct. He had been some years ago, but now he was simply the proprietor of the trade journals of America (the *Paper Trade Journal*, and AMERICAN STATIONER). He had heard that many Americans who had been over here had been called "blowers." (Laughter.) He felt that if he said anything startling he might also be put down as a "blower," so he thought he had better say as little as possible. He was sorry he could not give them an interesting speech. He had not seen very much of the trade here yet. He had been into Kent one day and saw them making a mighty fine sheet of paper upon a big lot of dryers; but they had had that machine in the States and after a fortnight's use it had been pitched out as old iron. (Laughter.) There was one thing, however, he wished to call their attention to and that was this: the great advantages America possessed as a producing country. Her duties protected her. She could come over here and buy the best materials free of duty, and could export her manufactured products free of duty, and could, on the other hand, prohibit imports by the same means. Labor was, perhaps, so far as skilled labor was concerned, dearer than it was here, but common labor was about the same. The problem that would force itself upon England was this, that America had a great future as an export nation. It might not be to-day, but he believed it would certainly come to pass in time. No interest was better prepared for an advance than the paper trade of America, and the question to consider was the fact of the Americans being able to export their paper, not necessarily to Great Britain, but to non-producing countries and markets of which England was very jealous. He could assure them that America was destined to take a fair portion of the world's commerce, and he thought that this was a point worthy of consideration from all present. Mr. Lockwood thanked them all for the honor they had done to his nation, and for the kind attention and reception accorded to himself. (Cheers.)

The chairman proposed the next and last toast on the list, namely, "The Honorary Secretary." (Loud cheers.) He thought after the remarks from their American friend that it was advisable for all young men to at once enter themselves as members of the society, before the American exporters took away all their trade. (Laughter.) The chairman then paid a warm tribute to Mr. West's capabilities and personal qualifications for the responsible post he filled so ably, and he thought that the society could not have a better man, and he gave them the toast with a certainty of its having a warm and cordial reception. (Loud cheers.)

Mr. West, who was enthusiastically received, thanked all present for the manner in which they had received this toast. He assured them that it was a pleasure and privilege to perform his duties to the society, and his best reward was to know that his efforts evoked the satisfaction of the members. (Cheers.) Mr. West then urged upon young members to join so good a society. He mentioned again that the society was a provident and not a benefit society. He reminded them that although now they might have plenty, and were able to make plenty, there was no certainty in life; a misfortune might overcome them, and then it was that the aid of this society would afford so much timely comfort and relief. He had an extensive knowledge of societies, similar to the society which he was now urging upon their attention, and he could say, with every confidence, that he knew of no one society that could afford to give such a large amount of relief as theirs. In five years, the subscriptions had only amounted to £1,291, but over £4,600 had been given away during that period. (Loud cheers.) The total expenses of management were only about £100 a year. (Cheers.) He thought that great credit was due to Henry Green especially, for his efforts to extend the utility of the society to its highest point, and he could offer no better instance of its efforts than the figures of the report. They were now granting to thirty annuitants £1,063 10s. per annum, and he wished to say that no other society could excel the beneficial efforts and objects of this society. Mr. West concluded by saying that he hoped long to serve them, and if he should ever, through some cause or accident, cease to act for them and have to resign his position he would do so with painful feelings. In fact the words of the song before him fully expressed his mind upon this matter and he would just read them as his concluding remarks:

The tear fell gently from her eye
When last we parted on the shore;
My bosom heaved with many a sigh,
To think I ne'er might see her more.

(Cheers.)

The proceedings then terminated.

GOLD AND SILVER PLATED FLOWERS AND INSECTS.

At a recent meeting of the Physical Society, Berlin, Professor Christiani exhibited as samples of a new method of preservation a series of organic bodies coated galvanoplastically. A mulberry leaf, a crab, a butterfly, a beetle, the brain of a rabbit, a rose-bud, and other objects were plated with silver, gold or copper, and showed all details of their outer form, down to the finest shadings. As to the process, it was stated that the objects to be preserved being put into a solution of silver nitrate in alcohol, then dried and treated with sulphureted and phosphureted hydrogen, form good conductors, which, brought in the usual way into the galvanoplastic bath, can be coated with any desired thickness of a metallic deposit.

CEMENT.—Lovel, in Paris, has patented a method for the manufacture of cement, by mixing magnesia with the crystallized sulphate of magnesia and moistening the mixture with water, also by mixing the magnesia with a solution of the sulphate of magnesia.

CRANE BROTHERS.

Crane Brothers, Westfield, Mass., make a specialty of bank, ledger and record papers known as "linen" and "all linen." These papers are handsomely made, of excellent texture, and the water-mark, which is to be found in every sheet, may be accepted as a guaranty of quality. The goods are warranted to be of the first grade, and the "all linen" papers are manufactured from the best and purest stock. It is not hyperbole to class these papers with the best manufactured in any country, or to assert that in all the features of strength, fineness, durability and appearance, they cannot be excelled by any like goods that are made. They are called "machine hand-made" because, although made on a machine, so thorough has been the care and exact the judgment in their production, that they are deemed equal to hand-made papers. One resemblance is in having the water-mark in the same place in every sheet, a device in manufacture which is peculiar to this mill. The firm makes quite a feature of water-marks, having forty dandy-rolls in the mill, some of which, however, belong to customers. A favorite mark is the crane, without any words or other sign, to denote the makers, and a different design is used for each size of paper, so that the trade soon learn to distinguish the sizes by the kind of crane in the water-mark. Besides the reputation these papers have gained in this country, they are known also abroad, being sold in South America, Australia, and even in England, to some extent. The Crane papers are in weight between bond and thick letter paper, and the firm makes more varieties of "all linen" than any other concern in the country, all being put up 500 sheets to the ream.

The papers made by this firm have been exhibited at four World's Fairs—Melbourne, Australia, 1880; Paris, France, 1878; Berlin, Germany, 1878, and Philadelphia, 1876, and in each instance they received the highest awards. They also received high awards at the American Institute, New York, and Franklin Institute, Philadelphia, 1874. The success attained for these papers has only been achieved after years of patient labor and experiment, but the result is an abundant reward for its cost. To-day the trademark of the Crane Brothers is known the world over, and their papers are indorsed and used by the leading stationers and blank book manufacturers of the country.

In addition to the production of fine papers, and without interfering with it, the firm manufactures paper baskets, and is pushing the enterprise with great vigor, having erected a new building for the business. The baskets are made from all linen stock, chiefly cuttings from sail factories. The bottoms are pressed out from the pulp and the sides are made in a cylinder paper machine, the two parts being welded together under powerful pressure. The baskets are used for almost any purpose, from the roughest kind of mill work to the use as scrap baskets on the desk, the small sizes being finished in imitation of the Japanese lacquer work. The firm is making baskets to measure 200 bushels or so a day.

LACQUERING BRASS.

The lacquering of brass work and dipping after the approved manner is a process to prevent oxidation, and so protects brass objects against climatic influences. The effect of dipping is to change the dull reddish hue of castings to a bright tint or brass color; the burning liquid into which the brass work is dipped hisses and bubbles upon the casting as it is lifted from the bath, removes all impurities and leaves the

yellow metal perfectly clean. So powerful is the cleansing agent that it commences to simmer, and becomes green as the brass work is removed to the contiguous water bath, in which it is thoroughly washed and made ready for further treatment in the process of finishing.

THE GENDRON IRON WHEEL.

About six months ago a description and illustrations of the goods manufactured by the Gendron Iron Wheel Company were published in these columns. Since that time the wheel has been applied to various manufactures in which wooden wheels have been used, and it is said to have given eminent satisfaction in every instance. In fact, wherever lightness combined with superior strength is a desideratum, this wheel may be very profitably employed. It is used extensively on velocipedes and bicycles, children's coaches, &c., where it is claimed to outlast and outwear half-a-dozen ordinary wooden wheels, while the strength of this wheel employed on an ordinary baby-carriage is equal to

that of the wooden wheels used on ordinary traveling vehicles. The advantages of iron and steel over wood in point of durability are apparent, without insistance.

In this wheel the spokes are of Bessemer steel, and are bent and inserted into the hub in such a way that one piece of wire forms two spokes; the outer section of the hub into which the spokes are inserted is made of malleable iron, and the inner part, which also forms a box for the axle, is made of wrought iron, and the spokes and hubs are secured in such a thorough manner as to prevent working loose or giving way. The spokes radiate alternately from each section of the hub, and the outer ends pass through the wrought-iron tire, which is half an inch wide and seven thirty-seconds of an inch thick, and they are countersunk and riveted in the most thorough manner.

This peculiarity of construction, it is said, enables the wheel to sustain a heavier load than is possible with any other pattern, the parts being so arranged that the weight upon the wheel is equally distributed over every portion, making it a perfect suspension wheel, the weight being distributed over an arc, and not directly imposed on any given point. The weight upon a wheel of ordinary construction is imposed upon the spokes radiating from the lower part of the hub, whereby, if they are too weak for the purpose, the spokes will buckle or break.

As to the other advantages, it is claimed that when used on trotting buggies, the lighter weight and less windage of this wheel will allow a gain of from one to three seconds per mile.

The wheel is rapidly finding a fixed position in the manufacture of vehicles and agricultural machinery. It is also proposed to employ it as a pulley.

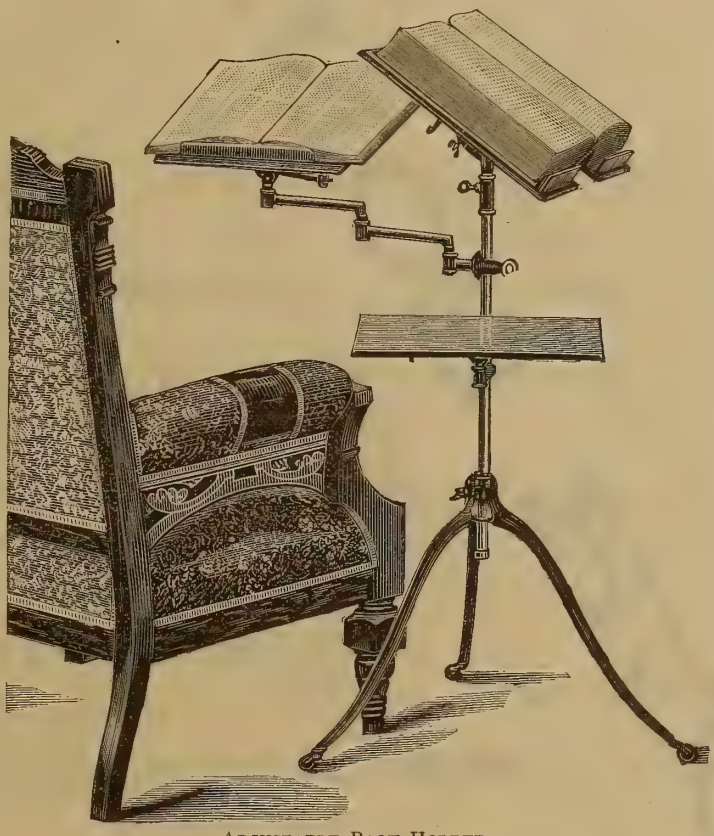
THE MUSTANG MAILER.

This useful invention, which has been mentioned before in these columns, has had a very flattering sale all over the country during the past year. The machine prints directly upon the paper or wrapper, and the mailing lists being set in galleys are easily altered. It is made wholly of iron, without springs, works very simply and easily by a pawl and ratchet movement, and it is claimed that a boy can print with it 1,500 to 2,500 addresses per hour. It is small, and can be easily sent by express to any part of the country ; and as the original cost is very trifling, and there are no subsequent royalties to pay, it it should be well received by all who have any amount of mailing to do, from the large daily to the jobber who reaches the trade by means of circulars or pamphlets. It is made by the St. Louis Type Foundry, Third and Vine streets, St. Louis, Mo.



Ready to Receive Paper.

THE "LAMBIE" ADJUSTABLE BOOK HOLDER.

In this book holder is furnished all that has hitherto been lacking in any previous attempt to produce an article perfect in every respect for the purpose for which it is designed. The following points constitute a summary of its merits : It is adjustable to any size book. It is adjustable to any desired height. The book can be adjusted to any angle. It can be made rotary or rigid. It holds the book open or holds it closed automatically. It protects the book and will not mar the binding. It is so constructed that it folds compactly. It is so simple that it can be manipulated by anybody. It is rigid, and cannot become unsteady by the weight of any book. It cannot get out of order. It is graceful in design, elegant in finish, and weighs only nine pounds. The legs are iron, black japanned, with rollers. The standard is nickel-plated, and the top polished black walnut.

To adjust the top to suit different sized books the sections are drawn apart the distance of the thickness of the book. In opening or closing the book the sections of the top work with the cover, and work automatically, the same device serving both purposes of holding the book open and holding it closed.

The holder is adapted to the wants of students and professional people of all classes ; for the offices of merchants, to hold books of reference, such as mercantile reports, &c., and for general use in the home, for dictionaries, family Bibles, &c. It also makes a perfect music stand. It is manufactured by R.M. Lambie, 103 Fourth avenue, New York, and sold by French & Choate, 4 Bond street.

Adjustable Book Holder.

In printing envelopes it often happens that the type is injured by the lumpy nature of the gum used in the manufacture of the envelope. To obviate this, use a blotting-paper tympan, and then, when the impression becomes irregular by reason of inequalities of surface, the evil can be remedied by slightly damping the tympan with water.

MYERS BROTHERS' OFFERINGS.

Myers Brothers, 62 John street, have on view an immense assortment of Christmas cards, comprising samples of the productions of all the noted houses. Thos. De La Rue & Co.'s sample book deserves all of the encomiums that have been passed upon the previous productions of this celebrated house. Of ordinary cards there are about a hundred series. The embroidery series on satin, the book-marker series and the d'oyleys have each received many charming additions. Altogether the book is a highly satisfactory and creditable production, and will undoubtedly command a very large share of public favor.

Raphael Tuck & Son's new royal academy series of cards are reproduced from designs supplied by several of the most eminent and well-known members of the Royal Academy, among the list of artists being T. C. Dobson, J. E. Hodgson, J. R. Herbert, E. J. Poynter, W. F. Geames, J. C. Horsley, G. D. Leslie, J. Sant and Marcus Stone. Messrs. Tuck's book of general samples contains an almost endless number of designs in addition to those which have already become popular favorites.

A series of etchings by Tristam J. Ellis, published by the Artistic Stationery Company, of London, comprises three views of Kensington Gardens and three of Hyde Park, namely : Kensington Palace, "On the Long-Water," The Broad Walk, the Albert Memorial, by Turlight, Rotten Row at Midday, and the Serpentine. The subjects of these etchings are so familiar to traveled Americans, and the treatment of the artist is so effective that they cannot fail to meet with appreciation. Mr. Ellis has particularly excelled in his handling of foliage, the pictures being remarkable for the light and delicate manner in which the views are presented.

The choice line of cards produced by Marion & Co., Paris, is extremely effective, the richness of the decorations in silk and plush being especially noteworthy. Portraits of celebrities, colored in oil, comprise an elegant series, while the specimens of instantaneous photography are particularly good, embracing the principal views of London and Scotland, plain and colored, panel size. Two photos, entitled respectively "Bosom Friends" and "Any Port in a Storm," are well worthy of attention.

As previously announced, Myers Brothers have succeeded to the trade of T. G. Dando, of Philadelphia, who last season showed a line by Marlborough, Gould & Co., of Old Bailey, London. The examples now displayed consist of specimens of choice hand-painting on cards and ivorine lettered for Christmas, birthday and wedding anniversaries.

John Walkers & Co., of 96 Farringdon street, have a fine line of goods. Costly materials and a high standard of taste as well as technique are the foundation of their claim to attention.

The sample book of Poulton & Son, of Lee, contains large size boudoir, promenade, malvern (a new intermediate size), cabinets and c. d. v.'s. The most noteworthy subjects are children and flowers. A selection of landscapes is also included.

Myers Brothers have also on view at their warerooms the complete production of Christmas cards of William A. Mansell & Co., of Oxford street, London. The book now ready for inspection contains some twenty-five series of chromo pictures, including sepias and outline drawings colored like water-colors ; two dozen series of photographic landscape subjects ; twenty series of bird subjects, by Harry Bright, colored and plain ; floral groups, plain and colored. The most charming of all, however, are the figure subjects, which are reproduced from crayon drawings in colors. Some of the faces of children and girls are ideal studies and highly artistic. Supplementary sections consist of natural ferns and seaweeds, paintings on gelatine cards, &c.

The cheapest and most simple mode of making a stereotype metal is to melt old type, and to every fourteen pounds add about six pounds of grocers' tea chest lead. To prevent any smoke arising from the melting of tea-chest lead, it is necessary to melt it over an ordinary fire-place, for the purpose of cleansing it, which can be done by throwing in an ordinary piece of tallow about the size of a nut, and stir it briskly with the ladle, when the impurities will rise to the surface and can be skimmed off.

Call the attention of the trade to their superb line of goods for the new season, and invite an early inspection of them.

REVERSIBLE DOCUMENT ENVELOPE.

The Reversible Document Envelope upon which patent was allowed April 28, 1882, is made of either one or two pieces of paper, fastened together as shown in the first illustration with two eyelets at either end, through these eyelets, a strong rubber cord covered with linen is passed, appearing on both inside and outside of the envelope, and thereby making it equally useful either way. This point claimed has many advantages when the envelope is used for sending samples of merchandise by mail, as it enables the person receiving such samples to return his selections by simply reversing the envelope and returning to the party sending.

But the greatest advantage claimed is the fact that the envelope is equally useful for a single document or a number equal to the capacity of a 2½-inch document envelope, conforming to the number placed within its folds and securely held in place by the rubber cords when thrown over the ends, thus possessing all the advantages of the flat, crushed, and box envelope, and making a single one answer the purpose of all, it saves the annoyance of tying tape, or the trouble consequent upon the use of loose rubber bands.

The patent is held by the manufacturers, and they report large sales for the brief time the goods have been before the public. The quality of stock used (as an examination of samples sent us establishes) is first-class in every respect.

Reversible Document Envelope.

Manufactured by Cincinnati Paper Novelty Company, 124 Walnut street, Cincinnati.

BAILEY'S ASTRAL LANTERN.

An ingenious apparatus for aiding the study of the heavens, and which is worthy of attention on the part of teachers as an excellent aid in practically familiarizing pupils with the positions and movements of the heavenly bodies, consists of four illuminated maps of the heavens, so arranged and provided with appliances for adjustment that the student may have before him, whichever part of the heavens he is facing, a correct map of that part in the best possible position for comparison therewith.

The maps contain, in correct position, brilliant representations of all the stars seen with the naked eye, different sized disks representing their different magnitudes; also, in tint, their names and Greek-letter symbols, the constellation boundaries, mythological figures and names, and marks to show the location of the most interesting clusters and nebulæ, multiple and variable stars also being distinguished by marks.

In the southern side of the lantern is placed a circular revolving map, embracing the portion of the northern heavens within a radius of fifty degrees of the North Pole. This is adjusted to the place of study by inserting an artificial horizon, which covers up as much of the map as represents the part of the heavens hid by the earth at the corresponding latitude. It is adjusted to the time of study by revolving till the correct time appears on the dial of the indicator. The eastern map, on the western side of the lantern, represents the belts of the heavens lying between the celestial equator and the margin of the northern map. It is virtually endless, and rolled on frustums of cones past an open window; in which is seen the portion of this belt representing the eastern heavens at the precise time for which the map is set. By a revolution of the map itself it is set so that the stars will rise at the correct angle with the horizon for any latitude. A similar map, provided with similar adjustments on the eastern side of the instrument, represents this same belt at the heavens as it sets in the west. The entire southern hemisphere, upon a smaller scale, is placed on the northern side, and through a crescent shaped window is seen the portion of it visible at any northern latitude, the outer curvature of the crescent showing the location of the celestial equator, and the inner curvature representing the entire southern horizon from due east to due west. Each map is provided with an attachment for determining exact position, in lieu of a net-work of lines on its face. The entire construction of the instrument is so simple, and its adjustments so easy, that the merest tyro can understand and use it intelligently.

BUFFORDS' HOLIDAY SOUVENIRS.

The line of Christmas and New Year cards shown by J. H. Bufford's Sons is one of the largest and most *recherché* that has ever been offered by any single house. It comprises the best efforts of several leading manufacturers, and its designs are such that they cannot fail to please. There are over one hundred series offered, most of them being embossed, and they seem to vie with each other as to beauty and design. The numbers particularly noticeable are No. 11, in four designs, in plate shape, and representing tropical birds, flowers and figures in gold and colors; No. 20 is also in four designs, and shows large bouquets of flowers in baskets. Each of the designs of 1,218 exhibits a young girl amusing herself in a floral retreat; 2,095 is an elaborately finished series; 4,508 shows four designs of pansies. Each design, of No. 7, has an angel and a baby; No. 16 has a rich gold border, with figures and winter scenes. All of the designs of 1,210 show a child playing with lambs and dogs. No. 4,546 is in two designs and represents children playing; 1,216 consists of four designs, admirably executed and very life-like. The designs of 5,678 show flowers surrounding an oval centre, through which pass boughs covered with flowers, and supporting birds of beautiful plumage; No. 2,093 represents children riding on butterflies; 5,674 illustrates children playing; 1,234 shows landscapes or marine views in the distance; 5,647 represents shrines and churches with floral decorations; 5,731 is illuminated with birds of rich plumage in nests; 1,222 shows silver anchors embedded in flowers; 637 is in two designs, each of roses. All of the designs of 656 are very rich, and consist of fern leaves worked in satin; 720 represents cat's heads, bordered with flowers; 813 shows cherub's heads; 629 consists of four designs, each in the form of a pallette, and richly illuminated with flowers; 810 comes in four designs on mottled paper; 810 represents cats overturning flower pots in play; 313 represents water scenes, marine views and landscapes; 842 comes in three designs, which are, respectively, a milk pitcher, teapot and cup and saucer, with handsome decorations appearing on each; 903 shows umbrellas under which birds are sheltering themselves from falling snow; 908 consists of four designs, each of which shows a beautifully shaped hand holding a rich bouquet. The designs of 597 represent a man and a boy on a hunt expedition; the former shoots a cat and is chased by an old woman with a broom.

The Canadian line shown by the firm is illustrated by Canadian scenes solely, and includes sledging, ice-boating, tobogganing, skating, marine views and landscapes, &c. Besides these, the firm shows a large number of floral series that are very rich and attractive, and which must be seen to be appreciated. Among them is one which consists of a basket filled with flowers.

Falsehood is in a hurry; it may be at any moment detected and punished; truth is calm serene; its judgment is on high; its king cometh out of the chambers of eternity.

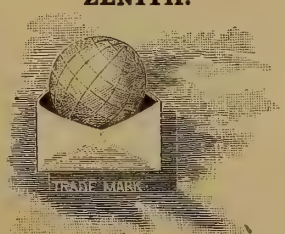
609 Chestnut Street, Philadelphia.

ESTABLISHED BY HENRY COHEN, 1838.

CHARLES J. COHEN

Envelope Manufacturer,



WHOLESALE STATIONER & IMPORTER OF FANCY GOODS,

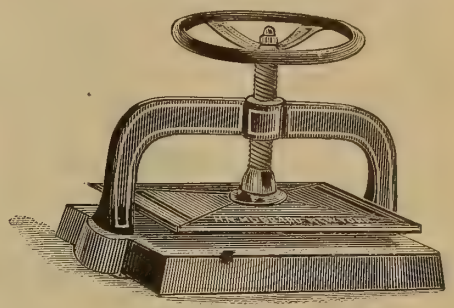
No. 505 CHESTNUT STREET, PHILADELPHIA,

MANUFACTURER OF

Envelopes, all grades and styles—Commercial, official, Invitation, Wedding, Card, Mourning, Glove, Tooth-Brush, &c. **Everpoint Leads,** for all Gold and Propelling Pencils. **Oil Board,** for Letter Copying (Centennial Award, 1876.) **Home Mills Ruled Papers,** all weights and sizes. Kent Mills Linen Papers, all weights and sizes. **Magnus Papers, Inks** and **Mucilage. Satinette Copying Books** and **Paper. Cornet Circulars.**

ZENITH.

SPECIALTIES:

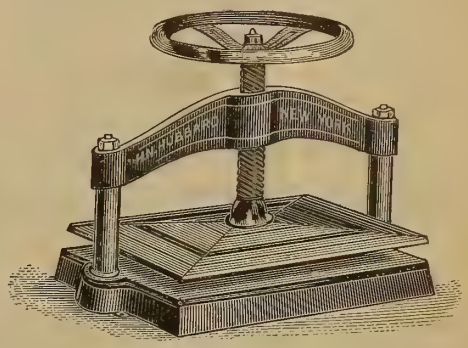


School Goods.—Now in store and in transit from Europe, one of the largest and most varied stocks ever offered to the Trade.

Fancy Goods, Christmas Cards, &c., selected this year by the firm in person in the leading marts of Europe, will include all the Choicest Novelties of the season.

☞ **In Press, a Catalogue and Price List of School and Staple Stationery,** which will be ready for issue shortly.

MALLEABLE ARCH COPYING PRESSES.



H. N. Hubbard, 313 to 319 East Twenty-second street, this city, has recently placed upon the market two styles of cypying presses, with malleable arches. The superiority claimed for these

STYLE L AND M.

presses is that the arches will not break. They are finished in a superior manner and cost only a trifle more than the ordinary cast-iron press of the same finish.

Style L receives a 10x12 book. M is 10x15 inch platen. These are finely finished in black, with gold leaf ornamentation and brass top nut.

STYLE N AND O.

Style N has a 10x13 platen, and O 12x16. These are elegantly finished in colors, with nickel-plated wheels, posts and nuts.

All the above presses are furnished with the new concave wheels or ball handles, as desired. Discounts same as on other styles of fancy presses.

Mr. Hubbard reports business exceedingly good for this season of the year, and, taken as a whole, the past season has been the best since he has been in business, and orders have increased largely over any preceding year, especially for export trade. New illustrated catalogue of over fifty different sizes and styles of presses will be furnished upon application to the office, 319 East Twenty-second street.

Dr. Precht gives an easy method for rendering drawings in Indian ink insensible to water, and thus preventing the ink from running when the drawing has to be colored and the lines are very thick. To the water in which the ink has to be rubbed, is added a weak solution of bichromate of potash of about 2 per cent. The animal gum contained in the Indian ink combines with the bichrome, and becomes insoluble under the influence of light.

To obtain models for plain ornaments, G. Gried, of Berlin, draws the design on a metal plate (German patent). The plate is slightly warmed and covered, by means of a soft brush, with a mixture of paraffine and wax, which has been rendered liquid by heating. On this soft plate, which can be made of any thickness according to requirement, the matrix is formed. From this, gypsum molds are taken for casting brass and iron.

Catalogue of Steel-Plate Portraits,

On 5 × 7 inch Ivory Finished Cards, Assorted Tints, Round Corners, Gilt and Bevel Edged,
WITH FAC-SIMILES OF AUTOGRAPHS, published by

RALPH TRAUTMANN, 312 Broadway, New York.

SET A.

In neat Leather Case, with descriptive Index Card, containing
21 STEEL-PLATE PORTRAITS OF THE

PRESIDENTS OF THE UNITED STATES,

WITH FAC-SIMILES OF THEIR AUTOGRAPHS.

Washington.	Van Buren.	Buchanan.
John Adams.	Harrison.	Lincoln.
Jefferson.	Tyler.	Johnson.
Madison.	Polk.	Grant.
Monroe.	Taylor.	Hayes.
John Quincy Adams.	Fillmore.	Garfield.
Jackson.	Pierce.	Arthur.

Price, $2.50 per Set.

SET B.

In neat Leather Case, with descriptive Index Card, containing
20 STEEL-PLATE PORTRAITS OF

EMINENT AUTHORS AND POETS,

SERIES I.

WITH FAC-SIMILES OF THEIR AUTOGRAPHS.

William Cullen Bryant.	James Russell Lowell.
Robert Burns.	Thomas Moore.
Lord Byron.	Edgar Allen Poe.
Charles Dickens.	John Godfrey Saxe.
Ralph Waldo Emerson.	Walter Scott.
Oliver Goldsmith.	William Shakespeare.
Fitz-Greene Halleck.	Bayard Taylor.
Oliver Wendell Holmes.	Alfred Tennyson.
Thomas Hood.	John G. Whittier.
Henry W. Longfellow.	Nathaniel P. Willis.

Price, $2.50 per Set.

SET C.

In neat Leather Case, with descriptive Index Card, containing
20 STEEL-PLATE PORTRAITS OF

OUR HEROES OF 1776,

IN CONTINENTAL UNIFORM,

WITH FAC-SIMILES OF THEIR AUTOGRAPHS.

Gen. Washington, Com.-in-Chief.	Brigadier-General Marion.
Brigadier-General Clinton.	Major-General Moultrie.
Brigadier-General Gates.	Major-General Putnam.
Count De Grasse.	Count De Rochambeau.
Major-General Greene.	Major-General Schuyler.
Paul Jones.	Brigadier-General Stark.
Major-General De Kalb.	Major-General Von Steuben.
Major-General De Lafayette.	Major-General Sullivan.
Major-General Lee.	Brigadier-General Sumter.
Major-General Lincoln.	Major-General Wayne.

Price, $2.50 per Set.

SET D.

In neat Leather Case, with descriptive Index Card, containing
20 STEEL-PLATE PORTRAITS OF

EMINENT AUTHORS AND POETS.

SERIES II.

WITH FAC-SIMILES OF THEIR AUTOGRAPHS.

Joseph Addison.	Alphonse M. L. Lamartine.
Geoffrey Chaucer.	John Milton.
James Fennimore Cooper.	John Howard Payne.
William Cowper.	Alexander Pope.
Degli Alighieri Dante.	Johann C. F. Von Schiller.
Johann Wolfgang Von Goethe.	Percy B. Shelley.
Nathaniel Hawthorne.	Robert Southey.
Josiah Gilbert Holland.	Edmund Spenser.
Victor Hugo.	William M. Thackeray.
Washington Irving.	Isaac Watts.

Price, $2.50 per Set.

LIST OF PORTRAITS ON HAND.

On 5 x 7 in. Tinted, Ivory Finished Cards, Round Corners, Gilt and Bevel Edge. ***Price, $15.00 per 100.***

1. J. Addison.
2. John Adams.

OTHER PORTRAITS

In Course of Preparation.

These Plates have all been engraved from the latest and most approved Portraits, and will compare favorably with anything in existence. When ordering, it will be most convenient for you to order by the respective ***Number*** of each subject.

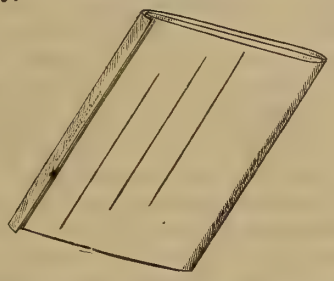
DISCOUNT TO THE TRADE.

RALPH TRAUTMANN, Publisher, 312 Broadway, New York.

WATER-PROOF GLUE.

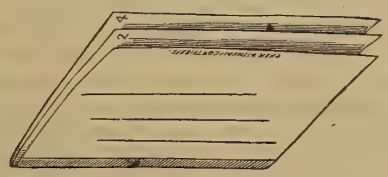
Dissolve ½ ounce each of gum sandarach and mastic in 8 fluid ounces of strong alcohol (or methylated spirit), to which add ½ ounce of turpentine. Put the dissolved gums into a double glue pot, add by degrees a hot, thick solution of glue, to which isinglass has been added; stir the whole over the fire until all the ingredients are thoroughly incorporated. Next strain through a cloth while hot, and it is ready for use. It may now be returned to the glue pot and ½ ounce of very finely powdered glass added to it. It should be used quite hot. Two pieces of wood joined by this glue may, when quite hard and dry, be immersed in water without fear of the joint opening or weakening.

Another formula is the following: Take of shellac, 3 parts; india rubber, 1 part, by weight. Dissolve each separately in ether free from alcohol. It is best to do this in stoppered bottles and without heating, as the ether readily evaporates. When solution is complete, mix the two, and keep well stoppered for use. This glue resists the action of water, both hot and cold, and most of the acids and alkalies. Pieces of wood, leather or other substances joined together by it, will break at any other part than at the joint thus made. If the glue be thinned by the admixture of ether, and applied as a varnish to leather along the seams where it is sewed together, it renders the jointed seam water-tight.



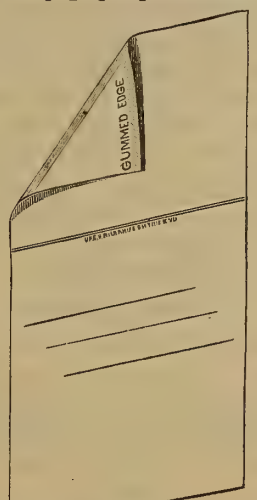
GILDING LEATHER.

Dampen the skin with a sponge and water, and strain it tight with tacks on a board sufficiently large. When dry, size it with clear double size; then beat the whites of eggs with a wisp to a foam, and let them stand to settle; then take books of leaf silver and blow out the leaves of silver on a gilder's cushion; pass over the leather carefully with the egg size, and with a tip brush lay on the silver, closing any blister that may be left with a bunch of cotton. When dry, varnish over the silvered surface with yellow lacquer until it has assumed a fine gold color. The skin being thus gilded, may be cut into suitable strips or patterns. It should be carefully observed to have the skin well dry before sizing it. Bookbinders gild the edges, &c., of leather in a different way. They first go over the part intended to be gilded with a sponge dipped in the glair of eggs (the whites beaten up to a froth and left to settle); then, being provided with a brass roller on the edge of which the pattern is engraved, and fixed as a wheel in a wheel in a handle, they place it before the fire till heated, so that, by applying a wetted finger, it will just hiss. While the roller is heating, they rub the part where the pattern is intended to come, with an oiled rag or clean tallow, and lay strips of gold leaf on it, pressing it down with cotton; then with a steady hand they run the roller along the edge of the leather, and wipe the superfluous gold off with an oiled rag, and the gold adheres in those parts where the impression of the roller has been made, while the rest will rub off with the oiled rag.



BLACK VARNISH FOR PAPER.—An impermeable black varnish is made by a combination of three ingredients—tannin, tar or pitch, and supersulphate of iron. It is more or less brilliant, and more or less impermeable, according to the proportions of these three substances. The apparatus used in its preparation is the most simple. It is only necessary to procure a vase or receiver which will contain a certain quantity of the product. This varnish may be applied either on wrapping paper or on strong paper, upon pasteboard, upon light roofing—in short, upon all that needs to be varnished or made impermeable.

NOVELTY PAMPHLET CIRCULAR.



Herewith are illustrations of the Novelty Pamphlet Circular manufactured by the Cincinnati Novelty Paper Company, which, for novelty, will attract the attention of advertisers

who use circulars, and the fact that it dispenses with the use of an envelope will increase its sale in point of economy. The circular is furnished flat, as shown in accompanying cuts, with address lines printed and edge gummed. When

printed, folded and sealed, it passes through the mail without an envelope. When received by the person addressed, and opened as indicated, it shows a six-page pamphlet securely bound,

and presenting the circular in a neat and readable shape. The Novelty circular has met with favor in the trade, and need only be shown to the printers to enlarge its sale. Orders should be addressed Cincinnati Paper Novelty Company, 124 Walnut street, Cincinnati.

SABIN'S MUCILAGE CASE.

This useful and convenient novelty, which has been already illustrated in these columns, is said to be having a growing sale among stationers, and there is no apparent reason why it should not. It is cheap and convenient, and avoiding all waste of mucilage and smearing of desk, &c., should be well received by all who have much pasting to do. Druggists would find it convenient in labeling, while it is just the thing for those who have much mailing to do. It is said to be the *sine qua non* of the country editor.

PRACTICAL NOTES ON DECORATION.

In preparing a room to be thoroughly done it is proper to commence at the ceiling in every case. First, the ceiling and cornice is thoroughly washed and cleaned off, water being used freely; next, the walls are also washed thoroughly clean. If they have been papered, care is taken to see that all paste, little strips of paper, &c., are removed. If the woodwork is in good condition, free from dents or holes, some soda water and a piece of pumice-stone is used to rub down all the woodwork in the room, most attention being paid to doors and shutters, as that, being generally the broadest work, shows irregularities most; all soda water being washed off with clean water afterward. This being done, the ceiling and cornice should have the first coat of color. This is made by a mixture of white lead, patent driers, turpentine and linseed oil, so as to be quite thin and oily. When this is done the walls are treated in the same way, the brush being worked up and down so as to get the color on evenly. The woodwork should now receive a coat, which need not be quite so oily as that used for walls and ceiling. Supposing this to be done, it is allowed to stand until the next day to get thoroughly dry. The work is then stopped or faced up, as it is called, which means that all dents, cracks, joints, &c., are carefully stopped up with putty—this putty being made by adding whitening to stiff white lead, until it is the same consistency as common putty (oil and whitening)—all holes, &c., should be stopped quite level with the surface of the work, so as to avoid any bulgy appearance. The work should now receive another coat of color, which should be a little thicker than the last, by adding more white lead to it, and a little turps (not much of this, however, as you only want to make your color a little harder, not to go dead or flat). This is also allowed to dry, and then a third coat is given to it. The work is now ready for grounding, as it is called; and if not already arranged, you should decide what the finishing colors are to be, as the work is now all white.

Let us suppose it is a dining-room that we are doing. It should look cheerful; no washy coloring; but everything to look rich, and of a warm tone. A good effect may be got by a ceiling of a pale-warm buff, walls of a rich salmon color. Doors and windows much darker salmons than walls. Skirting darker still, inclining to a maroon. The cornice may have a cool gray in it. Buff brighter, and stronger than ceiling, and salmon equal to strength of color on doors. Supposing this color is agreed to, some of the white left from the third coat of coloring is tinted with yellow, &c., until you get the required color for ceiling. Most of this color is taken and thinned with linseed oil, so that when dry it shall have a good glossy surface. This is called the ground color for flatting upon. Now take the remainder of this color and add a little more white to it until it is a good shade lighter (if this were not done, your ceiling would, when flatted, be darker than you intended it, but by making it a lighter it should dry exactly the shade required), and then put sufficient turps to it until it is quite thin; this is called flatting color. The ceiling should now have a coat of the ground color (which as before intimated, should dry glossy), and should finally receive a coat of flatting, the color being used freely, and stippled with a stippler (a brush made for that purpose). This is a work that requires two or more to do, according to the size of the ceiling. Flatting should always be done quickly, and on no account touched after the

color has set, as it always shows the least mark, if touched before dry. A ceiling, if properly done as directed, should look good and solid in color. White is then tinted until the required colors for walls is obtained, these being grounded and flatted in the same manner as ceiling.

The woodwork is then done in the same way, but the panels of doors and shutters are flatted first, then the stiles, and the moldings last, all beads that are intended to be various colors are run in afterward. A ceiling requires four coats of oil color and one of flatting to look first-class, as does also the walls. If the woodwork has been painted before, and is in good condition, it will not require so many coats. But if it is new wood, all knots and places that show any sap are touched over with patent knotting, a kind of varnish used for that purpose, before the first coat of color is put on. If the work is required to be varnished, the coat of flatting color is left out, and instead, another coat of the ground color is used. For light colors, maple varnish is generally used, and for the darker ones, such as Brown's black, &c., pale oak varnish. There is another method of varnishing called flat varnishing. Some white wax is cut up thin, and melted in turpentine and a little dryers, and some varnish added to it. If this is used over work quickly, and stippled lightly when dry, it goes quite dull, and will stand washing. It is very useful, as by it a bright varnished surface may be made as dull as flatted work. Should the woodwork be in such a bad condition that four coats of color will not make it perfectly smooth, it must be filled up, as it is termed. There are two methods of doing this—one is by mixing some whiting and a little plaster together and adding size to it until it is the same as stiff distemper color. The wood is first painted over with a thin coat of oil color, to give the whiting something to bind to, and when dry gone over with the whiting, which is rubbed down perfectly smooth with glass paper, and painted over with some linseed oil and dryers. The addition of the plaster to the whiting is to enable the glass paper to cut well, otherwise the whiting would only clog the paper up and give no end of trouble. The other method of filling up is to mix white lead with some pumice powder, adding japanners' gold size and a little varnish; this is laid on thickly, and, when hard, rubbed down with pumice stone and oil or water; the pumice powder is added to this for the same purpose as plaster is to the distemper. This is much the best way, as it becomes very hard and durable, and is only done in the best work. If the floor of the room is required to be stained, it can be done either in oil or water. Vandyke brown and Prussian blue make a capital stain, or Vandyke brown, burnt umber, and a touch of raw sienna make good stains for flooring, being dark and rich. For water stain, all holes and joints in the floor are stopped up with a mixture of whiting and size as strong as it can be made—tinted so as to match the new wood. Size is then added to the water stain, and the floor stained to a distance of about two or three feet from the skirting, the brush being used the way of the grain of the wood, two or three boards being done along at a time, and finished. If many of the boards were done at once, the stain would sink in, and look dark and patchy. When dry, it has a couple of coats of strong size, and then varnished with best hard oak varnish, that being the best for this purpose. If stained in oil, the floor is stopped in the same manner as for water, and then given a couple of coats of size. The stain is mixed with turpentine and boiled oil, and used in the same manner as for water, and afterward varnished with same varnish as above.

As regards coloring for rooms, that is simply a matter of taste. In drawing-rooms keep colors generally light and cheerful; in a dining-room they may be dark but rich; a library should be retiring, and have a good and quiet appearance. You may get a good soft green, that may be used in large quantities without being staring, by en admixture of raw sienna, green lake (light), and Venetian red and white, or another shade by raw sienna, indigo. Dutch pink and white (Dutch pink is much used by paper stainers, and helps to make a number of those soft, light greens, used on the grounds of their papers) or raw sienna, Antwerp blue, and burnt sienna also make a good soft green. A good color, somewhat resembling the old tapestries can be made for a library wall by mixing middle chrome, Vandyke brown and mineral green with white or Prussian blue, ochre and Venetian red. A good rich reddish brown may be got with orange chrome, Vandyke brown, Venetian red and white; a brighter one, by vermilion, brown lake and Vandyke. A rich buff by orange chrome, burnt sienna and a little raw sienna and white or Dutch pink, burnt sienna or white. A soft warm gray, by Indian red, blue black, burnt umber and white. A rich salmon color by middle or orange chrome, vermilion and burnt sienna with white. A dining-room would look well with the woodwork a soft dull yellow, walls same color, stippled over afterward with Indian red and burnt sienna, thin color. You may get rich, though somewhat dark, effect to a door, by painting it a light reddish brown, and then stippling over the panels coarsely, so as to show the ground, with a mixture of brown lake, Vandyke, the styles to be painted Vandyke, with some brown lake in it, rather thin, but stippled very close and fine, sufficiently solid, however, to look several shades darker than the panels. The prominent members of moldings to be the light reddish brown, ground color, and sunk hollows to be Vandyke and brown lake, quite solid. Add a little ornament on the panels in the light brown, and perhaps gold, and you will find that it looks remarkably rich and good.—*Decoration.*

TO GILD STEEL.

Steel may be gilded by means of a solution of gold ether. To do this, a quantity of gold is dissolved in nitro-muriatic acid and then boiled until the liquid evaporates, when the residue is dissolved afresh in water, to which is added three times as much sulphuric ether. The liquid is then left for twenty-four hours in a bottle, tightly corked, after which time it will be seen to float on the surface of the water. If the steel is then dipped into it, it will become gilded immediately, and if designs have been painted on the surface of the metal with any varnish, a beautiful specimen of a steel and gilded surface is obtained. For other metals the galvanic process is employed.

IMPERMEABLE LEATHER.—The following process for rendering leather impermeable, says the Manchester *Mechanical World*, is given by Mr. Jacques, of Hemning, near Sarrebourg. It depends on the property of soap solution being decomposed by acids, and being transformed into fatty acids which are insoluble in water. The leather is dipped before using in a solution containing from 2½ to 5 per cent. more soap dissolved in water. The tannic acid contained in the leather, more or less, according to the method of tanning, transforms the soap solution into insoluble fatty acids, and renders the leather perfectly impermeable.

INDELIBLE INK.

Dissolve 1 oz. of nitrate of silver and 1½ ozs. of crystallized carbonate of soda in separate portions of distilled water, and mix the solution; collect the resulting precipitate in a filter, wash it thoroughly with distilled water, and introduce it while still moist into a stone mortar; add 8 scruples of tartaric acid, and triturate the whole until effervescence has ceased; next add sufficient ammonia to dissolve the tartrate of silver, mix in 4 fluid drachms orchil, 4 drachms of white sugar, and 12 drachms of finely powdered gum arabic; then add sufficient distilled water to make 6 ozs. of the mixture. This ink is said to fulfill all the conditions that a marking ink should possess. It flows freely from the pen, without running or blotting; it does not require a very strong or long continued heat to develop it; when developed, it is perfectly black, and it does not injure the texture of the finest fabric.

RUBBER STAMP INK.

The following proportions are said to give an excellent ink, which, while not drying up on the pad, will yet not readily smear when not impressed upon the paper: Anilin red (violet), 90 grains; boiling distilled water, 1 ounce; glycerine, ½ teaspoonful; molasses, half as much as glycerine. The crystals of the violet dye to be powdered and rubbed up with the boiling water, and the other ingredients stirred in.

Another ink, which does not dry quickly on the pad, and is quickly taken by the paper, can be obtained, according to the *Papier Zeitung*, by the following receipt: Anilin color in solid form (blue, red, &c.), 16 parts; 80 parts boiling distilled water; 7 parts glycerine and 3 parts syrup. The color is dissolved in hot water, and the other ingredients are added while agitating. This ink is said to obtain its good quality by the addition of the syrup.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

THE GREAT ERIE RAILWAY,

LANDSCAPE ROUTE

OF AMERICA.

E. S. BOWEN, General Supt., New York.

JNO N. ABBOTT, Gen. Passenger Agt., New York.

PAST·PRESENT·AND·FUTURE.

THE AIM IN THE BEGINNING.

Ten years' experience in the retail Book and Stationery trade was enough to convince J. C. Blair, Manufacturing Stationer, Huntingdon, Pa., of two things particularly: *First*, That the sale of new goods or novelties was attended with risk; and *second*, that books and staple stationery were subject to very sharp competition, not only by fellow dealers, but, in many cases, by the original manufacturer himself. Success was assured to any manufacturing business that would overcome these two main difficulties, and to arrange to do this was his first aim.

To overcome the first the easiest plan was, as manufacturer, to assume the risk from the start, and guarantee fully and in every particular, any goods on which the trade-mark, "The Keystone," appeared, either by name or cut. This was not done, however, without going over the ground very carefully, as it was an innovation and contrary to the ordinary rules of trade and business. At first glance it opened up many chances where he would be taken advantage of, and be productive of much dissatisfaction, and that the collection branch of his business would have much harder work to do than the shipping department, that all sorts of irresponsible parties would take advantage of him, &c., and whilst goods might please and need no guarantee when they came to hand, everything would be wrong by the time pay-day would come around. To overcome the second was not so hard; it only needed a mild application of the old golden rule, and live up to it. With these points attended to, the goods themselves received his undivided attention, and it is for his customers to say if they have merited praise or condemnation.

RESULTS and PRESENT EFFORT.

It gives him considerable pleasure to say that his guarantee has been a success by endeavoring not to have any dealings with irresponsible parties. And impressing on his customers the fact that the guarantee was a bona fide thing, and not a mere catch-word, they took hold of the goods, feeling that there was some one behind them who would assume all risks, and having that off their mind gave all attention to introduction and sale, and the goods, like riches, took wings and flew away. In some cases custom, or a confirmed habit on the part of the customer, to use some other way of putting up goods, or a little timidity or carelessness on the part of the dealer or his assistant made the sale a slow one; and to return them and have the account closed in such cases was good policy for the dealer and fully as good a one for him. The dealer had no dead stock to be a continual eyesore and consumer of profits, and he had the account closed by cash and goods returned. They were good friends all around. In a few, very few cases, we think, some experiments were made as to the amount of good-nature still in the world. Parties have asked for samples, and desiring to try what he would say or do, have returned the goods either unopened or merely unpacked, and without any trial or offering made to the public, have seemly shoveled them back in the case. But a few exceptions are needed to make all rules, and you will say with us, very few are needed in this case.

His rule to at once refer any inquiries he may have from the general public to his nearest customer, has put him on the record as protecting his trade; it has been very satisfactory to him so far, and can't be otherwise to his customers. And now as to results. He has his goods well introduced in every State in the Union, with customers in England, Denmark, Germany, Siam, New Zealand, not to mention Mexico, South America or Canada. He tries to have a good name for honest work and fair dealing, and if he has that, we think it is something to be proud of.

PLANS FOR THE FUTURE.

It was incumbent in the beginning, that any goods to which he put his personal guarantee be possessed of merit, and a good deal of it, or his plan of introduction would be a failure. It is just as much so now that new goods have merit and quick selling properties, and his short rule in judging such goods is this: It must be quick selling, meeting a general demand, in fact, a staple article. That it be of the best material for the purpose intended, and that it can be sold at a popular price, and yet pay the dealer a handsome profit. Good goods build up a reputation for the maker and the dealer, and bring back orders over and over again for the same thing. Cheap and inferior goods add nothing to the reputation of a trade of either dealer or maker, and bring no trade to any one as they are picked up anywhere, and he who can and will make or sell the most inferior grade of goods, makes the sale, be it large or small. Such goods are generally used as "baits to catch gudgeons." It has not been his plan of action to make many promises or obtrude his establishment in the trade papers, as doing such a wonderful business that they had to work nights, refuse orders and all such things, but his business is such that they have all they can do comfortably and well, and as the orders increase their capacity will increase just as fast. He wants no machinery idle for want of orders. Machinery that is not in almost constant use is a loss, eats up interest and gets superseded by new improvements before it is half worn out. As fast as he can reduce cost of goods by reason of large purchases of raw material or improvements in making, he turns that reduction at once into either making the stock that much better or making the furnished article with more care, packing it neater or more convenient to the dealer, or putting on those innumerable little improvements that whilst they cost time and money, make up goods that find a universal market.

His trade will pardon this extended circular, which is intended in the nature of a personal letter. The correspondence that is confined to making out invoices and acknowledging checks, of necessity, deals only in cold figures, and he feels that a talk about as the above is somewhat like meeting his customer in person. It is true, the conversation is all on his side, but that proves you to be a good listener, which, it is said, is a great accomplishment. With many thanks for kind attention, Mr. J. C. Blair, Huntingdon, Pa., would be pleased to hear from you in reply.

BYRON WESTON

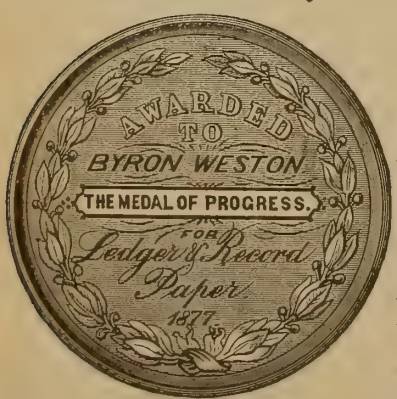
DALTON, MASS., U.S.A.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

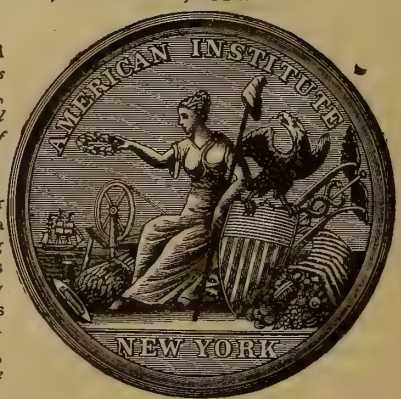


At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD AND LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.



—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot. Each sheet is water-marked with name and date.**

Correspondence.

CINCINNATI CLIPS.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., July 17, 1882.

Such another club house for all sorts of people, especially theatrical people, as J. R. Hawley's, 168 Vine street, one could hardly find on this globe. This store a few years ago sold such an enormous quantity of French's minor dramas that the publishers sent one of their members here to ascertain how it happened. The way it came about was through the great number of dramatic clubs in this city and in Newport and Covington. Up to two years ago there were in these cities fifty-two dramatic clubs, all in vigorous operation. Now there are in the same three cities only ten dramatic clubs. Hawley used to have great spaces of his wall covered with shelves, all filled with French's minor drama. Now French has gone up stairs, and longer shelves occupy the same wall space, but they are filled with the Seaside Library and the Franklin Square Library. Hawley's place is quite a banking house for actors, and also for some other customers, who go there and get their checks cashed. It is also a most wonderful news-stand. Papers from all parts of the country—in fact, from all parts of the world—are sold here. It is base-ball headquarters, and all wielders of the bat in the country know Hawley. Along about five o'clock in the evening, especially on Saturdays, one may see in this little nook a banker, a couple of lawyers, three or four merchants, half a dozen mechanics, a physician or two, actors coming and going, and now and then a preacher. There are all of the dailies and the weeklies and all of the magazines, and no end to toy-books for children, and there are the great cheap libraries and stationery knickknacks and staples, and there is Hawley with his benign face shining with smiles for all.

Stewart, the paper dealer, is to have a store that will shine. The fact is Stewart & Co. have 1,600 lineal feet of rooms. That is nearly a third of a mile, with an average breadth of about twenty-one or twenty-two feet. That is more than three-quarters of an acre of floor space, and every apartment is packed with goods. There are in all sixteen floors in the house and each is a hundred feet long. There is a sort of topographical arrangement of the goods according to floors and apartments. Of course other elements enter into the method of classifying and arranging the goods, but the one mentioned is the most obvious and the first to catch an inexperienced eye.

Van Antwerp, Bragg & Co. are causing their blank books to fairly sail out into the market.

Carpenter keeps his presses going, and keeps everybody around him busy, but shows a desire for still better times.

Woodrow is pushing a line of cheap blank-books on the market, and he is banging away printing pamphlets. Just think of one of his orders for 150,000 small octavos from one customer.

J. R. Mills & Co. are pushing their reversible postal wrapper—and it's a file wrapper, too—and are making a gratifying success of it.

PRINCE WILLIAM.

ST. LOUIS SAMPLES.

[CORRESPONDENCE OF THE STATIONER.]

ST. LOUIS, July 18, 1882.

Owing to the accident that befell Minerva and her noble Arabian steed (see last letter), she is taking a rest and has gone to seashore, and will shortly resume her correspondence with renewed strength, wit and news, both from abroad and home. Being one of her relatives in this hemisphere, it has fallen to my lot to keep you posted about this great metropolis and business centre. The great burden that has fallen upon your humble servant can hardly be described. If he reports that business is booming, rushing, he would be telling a big—story, and then, perhaps, the hatchet would be taken from him. If the actual state of affairs, that business is quiet and with some dull, is told, then some one growls and says he is busy—yes, very busy.

Your correspondent, in conversation with one of the most prominent grain dealers here to-day, has learned that the wheat crop is immense. He said that it will be the largest crop we have ever had and everything looks lovely.

The weather is fine—very fine. It is warm—"just warm enough, not too warm," and "cool enough, not too cool." We very cheerfully invite all of our Eastern friends to come out here to rusticate, and especially our Chicago neighbors, who are crying for fresh air and water. Come, come ye Chicagoans, and we will treat you to the beverage which Nature brews for all her children—pure, fresh water.

I had the pleasure of meeting Mr. Cooke, of the firm of Cooke & Cobb, who has been here selling goods. Mr. Cooke is, in the truest sense, a model salesman. In his own quiet way he shows his goods, explains their merits, and leaves it to the judgment of the buyer as to the amount desired. The result is that months after he has reached home, orders will come from buyers who know just exactly what their customers want. The average drummer goes to sell goods, not to build up a reputation for his house. To make large sales and a good showing is his only motto, and to do this he talks and talks, and frequently prevaricates, until his customer gives him an order to get rid of him. The goods come, and frequently twice as many as were ordered. They lie on the shelves because they are not what was needed, and consequently the customer is disgusted.

The annual contract for furnishing the State with paper and stationery was awarded to the Jno. J. Daly Stationery and Printing Company with scarcely any opposition. This is the eleventh successive year that Mr. Daly has received the contract. The method of awarding the stationery contracts has been the subject of discussion, and is much complained of.

J. T. KIRDERF.

THE GREAT VIENNA TELESCOPE.

The largest equatorial refracting telescope at present in existence is now en route from Dublin to its final destination—the great Vienna Observatory. This telescope, says the *British Journal of Photography*, the *magnus opus* of Howard Grubb, adds another laurel to the scientific workers of Ireland, who, hitherto unrivaled in reflectors, are now equally foremost in refractors. The mechanical parts of this telescope were completed so long ago as the year 1878; but, owing to the difficulty in obtaining perfect disks of glass, great delay occurred in finishing it, and it was not till about twelve months ago that the commission appointed by the Austro-Hungarian government to report upon it transmitted to headquarters their report, which stated their full approval of the manner in which the work was carried out. The value of this report will be seen when our readers know that the commission was composed of such distinguished men as Prof. Ball, the Earl of Crawford and Balcarres, Mr. Huggins, Prof. J. Emerson Reynolds, the Earl of Rosse, Prof. Stokes, Dr. G. Stony and Mr. Walsh, the Austro-Hungarian Consul at Dublin. The object-glass is 27 inches in diameter, and the telescope tube 33 feet 6 inches in length—just over a yard in diameter in the middle—tapered to the width of the object-glass at one end and to 12 inches at the other. It is composed of steel plate about an eighth of an inch thick in the centre and a twelfth at the ends. The weight of the whole of the moving parts is between six and seven tons; and yet, so marvelously and cleverly arranged are all the adjustments that the whole can be moved and set in position by one man's unaided arm. The immensity of the

instrument constitutes it a marvelous production ; but even this is secondary to the nicety of precision, the ease of the movements, and the excellence of the great lens. Additional lustre is conferred on the eminent constructor by the fact that he was specially chosen to construct the telescope upon the recommendation of the general director of the works, who had made a tour of inspection, and examined all the great observatories and astronomical workshops of Europe and America before making his recommendation. The object-glass of the above telescope is one inch larger than that of the great instrument at Washington.

CURVED STEREO. PLATES.

The *Printers' Gazette* says : "A correspondent sends us the following cutting from the *Illustrated Historic Times* of 1850. In the number of this paper, published in 1849, are some folio pages printed in tints, and one page (a vase of flowers) is actually worked in various colors by one revolution of the machine, the printing being done at Whiting's office at Beaufort House.

"One of the most remarkable inventions recently specified in French, but patented in this country by Gerard John de Witte, 'for improvements in machinery, apparatus, metallic and other substances, for the purpose of letter-press and other printing.' The invention is for printing from stereotyped plates, adapted to the surface of the cylinders of cylinder machines. Type has been hitherto only used, with any success, in flat forms, which received a to-and-fro rectilinear motion in the cylinder machine; and no successful attempt has been made to apply the type to the curved surface of the cylinder, as among other difficulties was that of preventing it from flying off the cylinder from the action of the centrifugal force, when rapid motion was given to the machine. This invention, therefore, consists of two parts : firstly, the method of making the stereotype plates, to be afterward applied to the curved surface of the cylinders; secondly, the arrangement and construction of the machine itself, so that these stereotype plates being used, the paper may be passed through in continuous lengths and printed upon both sides at the same time, and as it leaves the machine, may be cut into proper lengths and partially folded.

"The machine itself we cannot attempt to describe, but the following is the method of making the curved stereotype plate. The type being composed and placed in the chase in the usual manner, is laid on a hot table, under which pass flues from the furnace. A mold is then taken of it by pressing upon it by brushes wet sheets of tissue paper, sheet by sheet, which easily take the form of the type. This must be performed quickly (generally four or five minutes are sufficient), and the heat so arranged as to prevent its warping or sticking to the form. This tissue-paper mold is then fixed in a chamber, with a curved surface, having a curve equal to that of the cylinder to which the stereotype is to be afterward applied. The metal is then poured in between the surface of the curved chamber and the mold, and it takes the impression of it. The metal plate is cooled as quickly as possible by the application of water, and is then fixed to the cylinder. The metallic composition consists of eighty-five parts of lead, fifteen of antimony, and two of tin. The invention has been tried, it is said, with great success in Paris. It has also this advantage, that should the stereotype become worn, a fresh cast can be taken in a very short time. Experiments were made to see how soon new matter could be introduced into the stereotype plate, and it is stated that ten minutes more only were required than by the present method, however extensive the alterations may be. The machine may be also employed for printed paper hangings, calicoes, and other woven fabrics, by the use of engraved copper instead of stereotype plates. The specification describes an arrangement for printing in several colors, a cylinder being employed for each color."

ANTIQUITY OF PRINTING.

At a recent meeting of the Asiatic Society of Japan, E. Satow read a paper "On the Early History of Printing in Japan." The art of printing on wooden blocks, in China, seems to be due to the accident of some one desiring to obtain a fac-simile of an inscription on a stone monument, in the first instance by the process of rubbing with coloring matter over the paper and subsequently by covering the stone with India ink, placing the paper against it and rubbing It was probably long before the plan of engraving a composition for the express purpose of taking copies was thought of. In 175 A. D., the text of the Chinese classics was cut on tablets, which were erected outside the university, and of these impressions were taken, some of which are said to be still in existence. Printing from wooden blocks seems to be no older than the end of the sixth century. It was not until the tenth century that printed books became common.

In Japan, the earliest example of block printing dates from the middle of the eighth century. Before that stone inscriptions and seals with engraved characters were in use. The early Japanese prints were chiefly reproductions of the Chinese, Buddhist, and classical works, the absence of a native literature apparently retarding the adoption of the art of printing. The first really national work printed in Japan was the "Ni hongi," at the very end of the sixteenth century. Printed slips containing a *Dharani* out of the Buddhist scripture were distributed throughout Japan to the number of one million in 764-770 ; these were apparently printed from cast copper or bronze blocks rather than from wooden ones.

The earliest Japanese printed books were of a considerably later date. Of those which have come down to modern times, the oldest was printed about 1200. Printing received a great impulse from the expeditions of Hydeyoshi against Korea, when a number of books were brought back by the victors, and the Japanese learned what had been achieved by a people whom they had considered vastly their inferiors. Among these were some books printed with movable type, a contrivance which seems to have found immediate favor with the Japanese, for nearly all the books produced during the next thirty or forty years were printed with movable type.

The use of movable type was said to date in China from the middle of the eleventh century, but the author had not been able to corroborate this statement. Movable copper type was used in Korea at the beginning of the fifteenth century, and even earlier; indeed, one book so printed appeared to date from the years 1317 and 1324. And even if it were, after all, not so old as it seemed to be, there were others dating unquestionably anterior to the date of the invention of printing by movable type in Europe. The invention reached Japan from Korea, and there was a distinct mention of Korean types produced by casting and molding about 1420 A. D.

Although illustrated books were extremely common in more recent Japanese literature, the earliest Mr. Satow knew bore the date 1610. Previous to this, however, there were woodcuts on a large scale representing the popular gods, and to some of these a very great age was attributed. One of them dated from 1017, and another was engraved by Nichi-ren, who died in 1282.—*Athenæum.*

LAYING WALNUT VENEER.

First have the veneer and the surface to be veneered very smooth by going over with a fine toothing plane to take out all saw marks. The veneer must be left a little larger than the surface to be covered. The wood—not veneer—must be well sized with thin glue: you can do this by dipping the brush in the glue and then in the boiling water, and then allow it to dry. Have very good glue boiling hot laid on the wood and veneer, lay the one on the other and then well press together, having first damped that side of the veneer not to be glued with hot boiling water by a sponge. If a large piece, it will require a hot iron run over the surface to keep it down. It will all spoil if the iron is too hot. It must be clamped or weighted by laying boards on all night.

SILVERING GLASS GLOBES.

To half an ounce of lead add half an ounce of fine tin, and melt them together in an iron ladle ; when in a state of fusion add half an ounce of bismuth, skim off the dross, remove the ladle from the fire, and before it solidifies add five ounces of quicksilver, and stir the whole well together, being careful not to breathe over it, as the fumes of the quicksilver are very injurious. The operation should be performed under a hood communicating with a chimney of good draft, to carry off the vapors. Or, to four ounces of quicksilver put as much tinfoil as will become barely fluid when mixed. Have the globe clean, dry and warm, and inject the metal by means of a clean glass or earthen pipe at the aperture, turning it about until it is silvered all over, let the remainder run out, and the operation is finished.

All this Stationery may be relied on to be according to representation It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., *79 Beekman Street.*

SEASON 1882–1883. SEASON 1882–1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

☞ ANNOUNCEMENT. ☜

WE beg leave to announce the completion of our line of CHRISTMAS and NEW YEAR CARDS for the Season 1882–1883, for which our Agents will commence to solicit orders in May. We feel confident that the popularity which our Cards have enjoyed in former seasons will again be secured by the efforts we have made to bring out a line in advance of all our previous productions. The names of the Artists who have contributed designs is proof of our continued efforts to reach the highest excellence. We will name only the following:

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,

MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

Due regard has again been paid to the literary matter in connection with the designs, and many of the latter are accompanied by original poems, from writers of note, such as MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

Fringed Cards—All furnished with envelopes and protectors.
Envelopes—Furnished without extra charge for all cards for which the list price is $1.80 and over.
Backs have been specially designed for our cards, adding an attractive feature to them.

Bird Cards, by Miss F. Bridges, Mrs. O. E. Whitney and others
Figure Cards, by Miss L. B. Humphrey, Miss Rosina Emmet, Miss L. B. Comins, Alexander Sandier and others.
Flower Cards, by Mrs. O. E. Whitney and others.
Fan Cards, by Mrs. O. E. Whitney, in new styles.

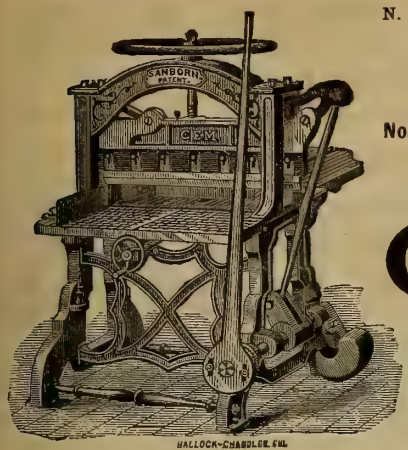
PRANG'S PRIZE CHRISTMAS CARDS.

THIRD COMPETITION

FIRST.—Artists' and Popular Prize Card ($2,000), by Miss Dora Wheeler,
SECOND.—Artists' Prize Card ($500), by Miss L. B. Humphrey,
SECOND.—Popular Prize Card ($500), by Walter Satterlee,
THIRD.—Artists' Prize Card ($300), by Miss L. B. Humphrey,
THIRD.—Popular Prize Card ($300), by Frederick Dielman,
FOURTH.—Artists' Prize Card ($200), by Alfred Fredericks,
FOURTH.—Popular Prize Card ($200), by Miss Florence Taber.

All our Prize Cards, and many of the other Christmas and New Year Cards, can be had in heavy mounts, with gilt beveled edges.

NEW YEAR CALLING CARDS.



Something New, in Elegant Designs.

—— OTHER NOVELTIES IN PREPARATION.——

☞ Sample Books for the Trade will be ready June 5. Delivery of orders will commence September 1. Descriptive Price Lists now ready, and sent on application.

THE BEST DIARY.

ECONOMICAL DAILY MEMORANDUM

·1883·

ANNOUNCEMENT.

WE present for approval the "Economical Daily Memorandum" in various sizes and styles, printed on good paper, strongly sewed and neatly bound, with leather backs and printed sides, also in full leather.

Besides a space for each day of the year it contains tables of the rates for foreign and domestic postage and money orders, valuable postal information, calendar and cash account for each month.

In addition to days of the week and month, the diary is numbered for the days of the year, a valuable improvement, useful for time calculations.

Dealers, whose trade does not warrant an investment of the considerable sum required to purchase an assortment of Diaries in the usual extended variety, will find a few dollars profitably spent in buying these goods, which come within the reach of all.

Dealers, already carrying a line of other Diaries, will find the "Economical" a valuable addition. Being made without flap or tuck they can be retailed at the price commonly charged for similar plain memorandum books, and therefore extend the sale to a different class of buyers.

We will be glad to furnish the trade samples at a reduced price. We solicit early correspondence in order that books may be received in time to make a selection and place an order for early fall trade.

Owing to the limited season during which Diaries are retailed, the demand must be anticipated by both jobbers and manufacturers.

VAN ANTWERP, BRAGG & CO.,

Blank Book Manufacturers,

CINCINNATI, O.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

No. 260,559. Artificial Stained Glass.—Jonathan O. Fowler, Jr., New York, N. Y.

Sheets of flexible transparent material are secured to net-work frames fastened together. A tile is secured by clamps to the net-work frame.

No. 260,583. Fluid Ink.—Jean Jacques Magne, Les Lilas, near Paris, France. Patented in France August 24, 1880, No. 138,392, and August 23, 1881, No. 144,495; in Belgium August 24, 1881, Nos. 55,540 and 55,541; in England August 29, 1881, No. 3,762; in Germany September 9, 1881, No. 17,515; in Italy September 30, 1881, XXVI—383; in Canada October 24, 1881, No. 13,595; in Luxemburg November 18, 1881, No. 169; in Spain December 20, 1881, No. 2,079; in Portugal January 25, 1882, No. 725; in Sweden February 1, 1882, and in Austria-Hungary March 11, 1882, No. 8,256 and No. 1,694.

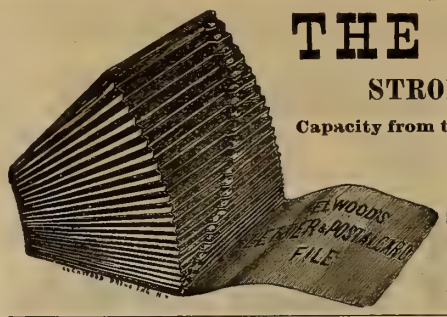
Makes a mixture of two parts of bichromate of potash, soda, or ammonia and one part of ferrocyanide of potash dissolved in from three to four times as much water as the quantity of the albumen used, which may vary, the proportion of salts being preferably about six one-hundredths of the whole solution. Then adds a neutral soluble coloring matter.

No. 260,584. Isographic Process.—Jean Jacques Magne, Les Lilas, near Paris, France. Patented in France August 23, 1881, No. 144,494; in Belgium August 24, 1881, No. 55,541; in England August 29, 1881, No. 3,762; in Germany September 9, 1881, No. 17,515; in Italy September 30, 1881, XXVI—383; in Canada October 24, 1881, No. 13,595; in Luxemburg Nov. 18, 1881, No. 169; in Spain December 20, 1881, No. 2,078; in Portugal January 25, 1882, No. 725; in Sweden February 1, 1882, and in Austria-Hungary May 11, 1882, No. 8,256 and No. 1,694.

No. 260,590. Penholder for Ruling Machines.—William A. McAdams, Brooklyn, N. Y.

The combination, with a penholder for a ruling machine and a support therefor, of an upright pivot connecting said holder with its support, so that it may be readily swung or adjusted laterally.

No. 260,594. Geometrical Puzzle.—Edmund Mehner, Milwaukee, Wis.



No. 260,605. Photographic Camera.—H. Clay Price, Montclair, N. J., assignor to the Scoville Manufacturing Company, Waterbury, Conn.

No. 260,621. Printer's Quoin.—Otto C. Springer, Cleveland, Ohio.

No. 260,671. Skating Toy.—John Doyle, Hokoken, N. J., assignor to Leo Schlesinger, New York, N. Y.

No. 260,688. Slate Frame.—Thomas Kane, Chicago, Ill.

A wood slate-frame having a binding or muffling attached thereto by machine-made stitches passing through and seated tightly in the edge.

PAPER WAREHOUSE, BOSTON, MASS.

Blackhall's Patent Improved Machinery For the Manufacturing Stationery Trade.

BLACKHALL'S ECLIPSE POWER PERFORATING MACHINE

Is now in use in most of the leading manufacturing houses in the trade. Its great rapidity for straight or stub work can be judged from the fact that a ream of medium, with one to five lines of perforation, can be finished in from five to seven minutes. It makes a clean, round hole, and will cut from the toughest tissue manilla to heavy card-board. I have just added a device whereby crooked paper or irregularly printed or lithographed sheets can be perforated true and even.

☞ Compare the speed, work and durability with your Table Machines, and you will see it would pay to put in the Power Machine.

WHAT THE TRADE SAY.

THE LATEST.—Levison & Blythe Stationery Co., St. Louis.—In reply to yours of 8th instant we would say that we have had your Power Perforator in constant use for the past two years on all classes of work. We have had no trouble with the machine during this time, and have had to replace but three pins. To-day it is in perfect order, cutting clean and even.

St. Louis, May 26, 1882.

E. W. Blackhall: *Dear Sir*—We have had in use one of your Power Perforating Machines (for about one year), and we have to say it exceeds our expectations, does splendid work, does it rapidly, is easily attended by a small boy, is **durable**, and in fact we could not keep house without it. We cheerfully recommend it to all requiring a first-class machine. Truly yours, Geo. D. Bainard & Co.

Courier Journal, Louisville, Ky.—We would not do without it if we had to pay double the price we paid you.

Barnes, Bancroft & Co., San Francisco.—Your Perforator gives every satisfaction.

Boorum & Pease, New York.—Our perforated work costs almost nothing when considered by the ream. We are well pleased with it.

BLACKHALL'S DOUBLE STRIKER COMBINATION.

This simple arrangement will do **twice** the work of an ordinary striker, and for **one-head** or stock work, it will lap the head and run the down lines as fast as faint, without striking. It will also work from one to five patterns at once, by hand or power. Send for Circulars, &c.

BLACKHALL'S RULING ATTACHMENT.

Can be applied to any sort of striker, and will give twice the usual results for same labor, saving from fifty to seventy-five per cent.

OPINIONS.

Hugh R. Hildreth Printing Co., St. Louis, on Hickok's Striker.—It has saved us time and money; we have every reason to be satisfied.

Beatty & Stevenson, New York, on Gouptill's Striker.—Easily adjusted, perfect accuracy, indispensable; send us another.

Brown Brothers, Toronto, Canada, on Hickok's Striker.—One machine, with attachment, does work of two without it.

Geo. D. Barnard, St. Louis, on Collins' Striker.—It does all you claim; it effects a saving of one hundred per cent.

The foregoing are a few of many letters of similar import I would also call attention to my SLIDING PEN LIFTER, GUIDE PIECE, DROP SCREW SELF-FEEDER, NEW STYLE RULING MACHINE, &c., &c. ☞ Send for Circulars, containing full details and illustrations, to

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

C. C. Keeler, printer, Providence Square, Pa., is dead.

A. Pearson, bookseller and stationer, Humboldt, Neb , has sold out.

A. L. Church, dealer in fancy goods, Chester, Pa., has sold out to F. B. Otis.

James L. Gay, dealer in fancy goods, New York city, has made an assignment.

McDonald & Son, bookbinders, Boston, Mass., have had their stock damaged by fire; insured.

W. G. Wilkinson, newsdealers, &c., Donaldsonville, La., has been closed out by the sheriff.

S. A. Castle & Co., commission dealers in notions, New York city, have dissolved partnership.

Isaac N. Honck, publisher, and C. J. Walden, publisher of the *Advertiser*, Fayette, Mo., have been burned out.

The *Herald* Enterprise Company, Russellville, Ky., has been incorporated, and will carry on the publishing business.

L. H. Trowbridge, printer and publisher, Detroit, Mich., has sold the Michigan Ready Print business to W. E. Andrews.

Bugbee & Kelly, stationers, &c., Providence, R. I., have dissolved partnership, John H. Kelly having withdrawn. John E. Bugbee, Walter F. Thompson and Henry B. Simmons continue as Bugbee & Thompson.

R. M. Whiting & Co., stationers, printers, &c., Brooklyn, N. Y., have dissolved partnership, R. M. Whiting retiring. The business will be continued by John M. Bulwinkle who will settle all outstanding accounts.

The "Spider" tuck is the latest in the way of advertising tuck circulars shown by J. D. Whitmore & Co. It is novel and attractive for advertising. The new shapes in gold bevel visiting cards just issued by this firm are the Bismou, Elliptic, Slavon, Gerund, Marrene, Amphora, Elliptic P. and Amphora P. They are certainly unique and will be much in demand.

After a long, careful and impartial trial, the United States Government has adopted for use in the Department of the Interior and United States Treasury Departments the celebrated United States Treasury mucilage and Treasury brilliant crimson fluid, manufactured by William A. Davis, 18 Arch street, Boston, Mass. These goods are made from the best and purest material, and can always be relied upon for their uniform excellent qualities. They will keep in any climate, and for any length of time.

Myers Brothers show the full and complete line of E. Bollans & Co., whose choice pattern-book was received some few weeks ago. From such a galaxy of superior goods it is difficult to select any for special commendation. Attention is called, however, to their hand-painted satin perfumed sachets. These goods will, without doubt, find a ready sale, as they are really works of art, the children and floral subjects being very pretty. Fringed and folding cards are also well represented. Sachets are a specialty with this old-established firm, and their assortment this season is most extensive.

Myers Brothers, 62 John street, have received from Thos. De La Rue & Co. their sample books of Christmas and New Year cards. The trade always wait with special interest the samples of this great Bunhill Row house. Their book for the present season retains many of the characteristics of former issues; but, while there are similarities in style, every page displays novelty in subject and treatment. The embroidery series on satin, the book-marker series and the d'oyleys have each received many charming additions, while sachets and fringed cards are fully represented. Of ordinary cards there are about a hundred series. Of the designs they have a new assortment of dainty nymphs, bird subjects, a few flowers, winter sports and Christmas revels. Sentimental compositions, beautiful children and bewitching maidens are also to be found, together with humorous episodes of Yule-tide merriment, landscapes and sea views, and scores of other subjects. Whatever may have been said of former books deserves to be repeated of this. The chromo-work in many of the cards might tempt lengthened periods of admiration. Intelligent consideration has been displayed in providing designs sufficiently varied in *motif* to appeal to the taste of young and old, of the gay and the sober-minded. The nude or half-draped figures of young girls, twin sisters of those who excited the opprobrium of Mr. *Punch*, display their charms with the freedom we are accustomed to see on the walls of Burlington House. Artistic treatment justifies freedom of delineation, and we have little doubt that the young ladies will find thousands of admirers. Altogether, the book is a highly satisfactory and creditable production, and will unquestionably command a very large share of public favor.

John Gibson's new line of Christmas and New Year cards are now ready and make a very handsome display. The line embraces some three hundred different styles and includes a large number of imported as well as a fair proportion of his own make. A feature of this display is the new loop fringe which adds greatly to the effect of the old style of plain fringing. The subjects embrace flowers, landscapes, figures, and almost every immaginable design to be conceived of, and must be seen to be fully appreciated. His velvets are a feature which he says are entirely orginal with him, being a combination of velvet, loop fringe and rosettes. Mr. Gibson has made large additions to his lines of reward cards. Silk woven goods mounted in mats with fringed borders and silk tassels are shown. The three salesmen of the house, Mr. Aikenhead, Mr. Thomas and Mr. Beach are now on the road with full lines of these samples.

The new alligator leather memorandum books made by the Powers Paper Company are having an unprecedented sale. They are said to be the greatest novelty of the season. Samples for inspection are shown at the salesrooms, 536 and 538 Pearl street, New York city, Joseph L. St. John, agent.

Z. Crane, Jr., & Brothers' two quire boxes in four different styles of paper are becoming very popular with the finest trade, and meet a want long felt for a really first-class article at a moderate price.

Burr Brothers, paper manufacturers, Philadelphia, Pa., have called a meeting of creditors for the 20th instant.

The stock of F. R. Straight, bookseller and stationer, Bloomington, Ill., has been attached.

Richardson & Powers, publishers of the *Argus*, Rock Island, Ill., have suspended.

Will. J. Kehoe, publisher, Carlisle, Ky., has sold out.

S. H. Egabrod, printer, Cold Water, Mich., has sold out.

The Davenport *Gazette* Company, Davenport, Ia., has sold out.

F. P. Kelley, stationer, &c., Tehama, Cal., has sold out to E. F. Wade.

William Ferguson, proprietor of the *Central Baptist*, St. Louis, Mo., has sold out.

Frederick L. Huntington, stationer, &c., Malone, N. Y., has assigned to Lyman J. Folsom.

Halberstadt & Kam, dealers in fancy goods, Portland, Oregon, have dissolved partnership.

Gittings Brothers, booksellers and stationers, Carrollton, Mo., have sold out to Creel & Sheppard.

Turner & Krause have succeeded William M. Turner, publisher of the *Sentinel*, Jacksonville, Oregon.

Mrs. A. S. Bosworth, publisher of the *American Citizen*, Canton, Miss., has sold out to J. G. McBride & Co.

Dershuck & Lewis, publishers of the *Independent*, Hazleton, Pa., have dissolved partnership. John Dershuck continues.

Obpacher Brothers have in course of preparation a catalogue of their Christmas goods. It will contain the numbers, prices, &c., of plain and fringed cards and satin goods. The house reports through its travelers an excellent business.

George L. Pease, president of the Stationers' Board of Trade, returned home this week from a two weeks' vacation in Southern New Jersey and Pennsylvania. This trip of about one hundred miles was made in a carriage in company with a portion of his family.

Henry Levy, of Henry Levy & Son, returned on Saturday per steamship Adriatic from Europe, where he has been for five months, making arrangements with the firm's manufacturers and selecting goods for the fall trade. This firm has secured direct agencies for many desirable specialties.

Burr Brothers, paper manufacturers, York, Pa., and dealers in paper stock in Philadelphia, have failed, and have called a meeting of their creditors to take place in Philadelphia to-day. The liabilities are reported at $30,000, and it is thought that they will offer to pay twenty-five cents on the dollar.

J. T. Roberts and E. W. Rolls have formed a copartnership under the style of Roberts & Rolls, for the purpose of manufacturing, importing and jobbing Christmas novelties and holiday souvenirs. They are located for the present at 331 Fourth avenue, this city, but purpose to remove to Bond street in September.

George B. Hurd & Co.'s lithographed "polka-dot" paper is one of their several novelties, and is very handsome, and shown in four colors. They also have a new "polka dot" made by the same process as Campbell & Smith's quadrille paper. Plain alligator and the new embossed alligator papers are also selling very well. The latter has become so popular and is being imitated to such an extent, that the owners of the patent process by which it is made, are about to take steps to protect their interests. This firm is receiving its supply of this paper through legitimate channels. The new morocco papers in four shades will be ready in a few days. The "Terrestial" is a very pretty and taking style, showing a representation of the heavens, the crescent moon and the stars on a deep blue paper. All of these are shown in addition to their regular line

of fashionable stamped papers. Samples and prices will be furnished on application.

Norwood & Caldwell, publishers, Russellville, Ky., have sold out.

F. A. Searle, printer, Boston, Mass., has had his stock damaged by fire.

Theron F. Carroll, paper manufacturer, New Milford, Conn., has sold out.

A. W. Ervin, publisher, Shannon, Ill., has removed to Byron, same State.

J. T. Roberts, lately manager of the Artistic Papeterie and Complimentary Card Company, 80 Nassau street, has resigned his position.

The competition in the fancy card trade this year is said to be very great. Notwithstanding this, most of the houses engaged in that business report that their travelers are doing excellently.

William K. Evans, of Evans & Gardner, who left this city for Europe about six weeks ago, forwarded a cablegram one day last week from Germany reporting himself well and on his way to Paris.

The fancy leather goods shown this season are said to excel in workmanship and design. Those manufactured in this country are particularly fine, and it is claimed that they surpass those imported.

A. H. Goetting is receiving large quantities of goods from Europe. They are of a great variety of styles and most of them are novelties. He has also manufactured a large line of goods of a unique nature suitable for the fall trade.

The lines of imported fancy goods intended to be offered this year will, it is said, surpass all previous efforts. All of the houses interested in these lines have been vieing with each other in their selections, which have been made with greater care than ever.

A fire broke out on Friday evening in the five-story brick building at Nos. 243 and 245 Pearl street, this city, occupied among others by Charles M. Cornwell, stationer, lithographer and engraver, the Empire Lithographic and Engraving Company, and Stillwell & Albertson, engravers. The losses and insurances are as follows: C. M. Cornwell, loss, $20,000; insurance, $28,000; Empire Lithographic and Engraving Company, loss, $10,000; insurance, $29,550; and Stillwell & Albertson, loss, $3,000, with insurance of $5,000. The loss on the building is estimated at $15,000, and is insured for $62,500. The fire originated from causes unknown on one of the floors occupied by C. M. Cornwell. The loss to stock and building is estimated at $65,000. Insured.

The trouble in the envelope combination, it is said, has been amicably adjusted. The New England manufacturers and two from this city met at the office of the Powers Paper Company, at Springfield, on Monday, and after considerable discussion, concessions were made by the concerns holding the large "blanket" orders, whereby all in the combination were to share in a division of them. The parties who have given these orders are allowed sixty days from July 1 in which to take the goods at the figures of the November price list. An understanding having been arrived at in regard to these "blanket" orders, no other question is now in the way of the effort of the combination to sustain prices. Another meeting will be held on Saturday, when the preliminary arrangements agreed to on Monday will be finally carried into effect. Those of the trade in this city express their firm intention of sustaining the combination rate, and taking no orders below the November list, from which no change is contemplated at present.

Among the visiting members of the trade in the city during the past week were Charles Humphreys, Adrian, Mich.; D. W. Glass, of D. W. Glass & Co., Baltimore, Md.; J. Rosenfield, Galveston, Texas; Lucian N. Brunswig, Fort Worth, Texas; Mr. Avery, of Steele & Avery, Rochester, N. Y.; J. H. E. Stelling, Charleston, S. C.; Mr. Fretwell, of Fretwell, Nichols & Co., Savannah, Ga.; C. M. Barnes, Chicago; Mr. Matthews, of John Wannamaker, Philadelphia; J. B. Clarke, of J. B. Clarke & Co., Chicago; H. M. Robinson, Danbury, Conn.; Louis Bernett, Wyandotte, Kas.; James Youngs, Bridgeport, Conn.; True S. White, St. Paul, Minn., and E. A. Grant, Fargo, Dakota.

E. P. Coby & Co.'s annual pad calendar will be ready for issue about August 15, and they propose to issue a large edition, printed in two colors as heretofore, which will be offered to the trade at a reduced price.

Charles J. Cohen, of Philadelphia, arrived by the steamer Gallia on the 11th instant. Mr. Cohen is greatly improved in health, and speaks in very sanguine terms of the approaching holiday trade.

Norwood & Caldwell, publishers of the *Herald-Enterprise*, Russellville, Ky., have dissolved partnership, and formed a corporation to be known as the *Herald-Enterprise* Company; authorized capital stock $10,000.

W. H. Hasbrouck, 91 Liberty street, has his new line of tablets, the "Universal" blotter tablets, in note, packet and letter, ready for the the fall trade. He says that the prices are lower than the lowest. The trade would do well to send for samples and terms.

There is a strong tendency toward art in every style of ornament, such as Cloisonné work and Japanese curios. Among these are rare and curious pieces of bronze, unset, to be set in silver for ornamental or useful purposes. One of these, of marvelous workmanship of copper, gold and dark bronze, represents a historical Japanese miracle: A poor widow who was ill needed for her cure a vegetable called tokevoko, impossible to procure in the winter, as it grows only in the spring at the root of the bamboo. The widow's son prayed to one of the gods, and in reply he was directed to a certain bamboo tree. Digging away the snow from the root, he found a fine, large tokevoko, of which his mother ate and was cured. This is one of the greatest miracles that have been performed by the gods, and it is worked out in bronze by the marvelous skill of the Japanese. Others of these bronzes show Japanese dancers, graceful and grotesque; Chinese soldiers, long-headed priests, Japanese bird-catchers and other miracles held in superstitious veneration. Some of these pieces, which are used exclusively for the decoration of silver, gold or copper table service, are made of the *shibu-ichi* (three to one)—three parts of copper to one of silver—mostly inlaid with gold.

FOLEY'S PAT. IMPROVED STYLOGRAPHIC PEN.

Great reduction in price: No. 1, $1.75; No. 2, $2.50; No. 3, $2.50; No. 4, $3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, JULY 20, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

COMMERCE is now waiting for the corn crop. We are probably out of the woods on all other returns. With corn assured, it is reasonably certain that trade will be generally prosperous.

IT is hoped that every reader of THE STATIONER went through the last number very carefully. Those who have not done so had better make it a business at once. We know—for we are constantly reminded of it by our readers—that our columns are closely scanned, but we want everybody to remember that not only one but each number of this paper will repay the closest scrutiny from beginning to end.

THE Germans talk of starting sample rooms or exhibitions of their products in every principal business centre of the world. The paper makers have been considering this plan, and we believe that it is intended to find out the character of each market and to exhibit goods suited to the demands of each location. This is a sensible way of doing business where houses are unwilling or unable to establish agencies. A combination of firms can thus develop a market at small cost.

IT would seem that the Germans are very much addicted to card-playing. By the German official statistics just issued it is shown that there are sixty-one manufactories of playing cards in Germany. Last year there were sixty-four. These manufactories turned out 4,233,192 packs of cards during the fiscal year last ended; there were 883,852 packs exported and 918,489 packs in stock at the close of the year. The total domestic consumption of playing cards in Germany during last year, therefore, amounted to 2,430,851 packs.

THE American Paper Makers' Association will meet at Saratoga on Wednesday next. It has been indicated that matters of importance will be brought before the meeting. Inasmuch as some of these concern the interests of the stationery trade, would it not be well for the Philadelphia Booksellers' Association and for the New York Stationers' Board of Trade to be specially represented before the Paper Makers' Association, and to confer upon the questions relating to the tariff and other subjects which might demand mutual suggestion and support?

THE rupture between the envelope manufacturers is alleged to be patched up, and it is now said that the "Standard" combination will sustain prices. Of course, after divers remote and near experiences, the trade will form their own conclusions and act upon their own judgment of the possibility of continuing harmony among the manufacturers. It is difficult to conceive why such an interest as the envelope trade should subject itself to distrust and ridicule. There are keen, intelligent business men engaged in it, and they are perfectly capable of judging of the effect which their frequent demonstrations may have on buyers. Yet they will meet and agree to stand by each other and separate only to fall apart. Is there something in the business itself adverse to harmony and the maintainance of agreements?

Communications.

[Correspondents are requested to write on only one side of their paper. No responsibility for the opinions of correspondents attaches to this paper.]

An Explanation.

NEW YORK, July 13.

To the Editor of The Stationer:

Referring to your foot-note to my letter published in your last (July 6), I emphatically deny having purchased the business of the Artistic Papeterie and Complimentary Card Company, 80 Nassau street, of the proprietors. They offered me the business, which I refused, the terms being too exacting.

I feel compelled, in justice to myself, to take some notice of your remarks, as I consider they cast a slur on my veracity. Your notice of this in your next issue will oblige E. W. ROLLS.

NOTE.—We did not, nor do we impugn Mr. Rolls' veracity. As we understand it, Mr. Rolls intended to take over the business of the company, and had arranged to do so, but finally declined to complete the arrangement for the reason given. If Mr. Rolls had frankly made this statement, he would have not had occasion to make further explanation.—[ED.

NORTHWESTERN BOOKSELLERS AND STATIONERS ASSOCIATION.

The Northwestern Booksellers and Stationers Association met at the Grand Pacific Hotel, Chicago, July 12, and on motion of W. H. Watson, H. H. Allen was nominated and elected chairman of the meeting, the president and vice-president being absent.

Mr. Allen said:

It is to be regretted we have not with us at the opening session either our president or vice-president, but from consultation it is believed that our vice-president will be with us this afternoon. It was thought best to call us to order, and see if there was any business reported; to come here and take such action as may be thought best by the meeting, and possibly adjourn until some early hour this afternoon preparatory to our permanent organization. We are now prepared to entertain any motion or transact any business coming before the meeting. I suppose the first thing in order will be the reading of the minutes of our last session.

The minutes of the previous meeting were then read by True S. White, secretary, and were duly approved.

The secretary then read the list of members, and after some business relating to the collection of membership dues, the association adjourned until the afternoon. On reassembling, Mr. Sutherland offered the following:

Resolved, That the trade sales as conducted by George A. Leavitt & Co., of New York, are detrimental to the book trade throughout the country, and we earnestly and respectfully request the publishers of books to discountenance the same, by withdrawing their patronage therefrom.

This resolution lead to extended discussion, and it was finally referred to a committee of three, consisting of Mr. Sutherland, Mr. Nicholson and Mr. Shields, to report at as early

an hour as possible before the final adjournment of the convention.

It was moved and seconded that the chair be called upon to appoint three members to constitute a committee to draft a constitution for the association.

The chair named as such committee J. E. Moseley, Alex. McNie and Pliny M. Crume.

The committee on Trade Sales then offered the following resolution :

Resolved, That we endorse the action of the Western jobbers in protesting to the publishers against the continuance of their patronage to the trade sales.

Mr. Sutherland said that an opinion was expressed by some gentleman that the first resolution was not in quite strong enough language ; that it should be more positive, more decided, and he was of the opinion that it is better to treat the publishers in a gentlemanly and respectful way, and that more might be accomplished in that way than by undertaking to dictate in too strong language to them. To use an old expression, "We can catch a great many more flies with molasses than we can with vinegar." By keeping on good terms with them they will listen to our requests. We can reason with them. They are intelligent men and reasonable men. I have always found them ready to receive me and talk with me on this question, and I have no doubt but if we continue in the course we have commenced, great good will result from it.

On motion of Mr. Sutherland, the words "discountenance the trade sales," were incorporated with the resolution, which was then formally carried by the unanimous vote of the convention.

Mr. White suggested that something should be done with the resolutions adopted last year. If they were in accord with the wishes of the convention, they should be reaffirmed and adhered to; if not, he would be glad to hear from any member to the contrary. If they meant business they should act accordingly.

The resolution was reaffirmed.

Mr. Yeager moved that a committee of three on miscellaneous and juvenile books be appointed, to whom should be referred the resolution adopted at the last annual convention. Adopted.

The chair appointed Messrs. Moseley, Boughton and Yeager to act as such committee.

After some further discussion the association adjourned to meet on the following day.

The association met on July 13, pursuant to adjournment.

The chairman called the meeting to order, and read a letter from Jansen, McClurg & Co.

The chairman then called upon the different committees to report, designating first the committee appointed to interview the local trade, and secure their attendance.

Mr. Moseley: In accordance with our instructions we waited on the three large jobbing houses of the city yesterday, and requested their presence this morning. We had promises, not very strong, from all of them, that they would be here. Mr. Walsh definitely promised he would come. Mr. Jansen, if it were possible, and I think Mr. Maxwell said definitely he would be here and take part in our deliberations this morning. They expressed some reluctance and if I might state the impressions left upon the committee by our interviews, it was that they were not particularly interested in the matter. "They thought his eyes was sot, and he was going to die anyhow," and there was no good of any remedies being applied. But we insisted it was a pretty lively body, and urged their attendance, and I think they will be here.

I think that I was chairman also of the committee appointed to draft a constitution and by-laws. I don't know that we have considered the matter as definitely as we ought to have done, but in the short consultation I have been able to have with one of the committee this morning, we have concluded that, as the meeting is small, a constitution will do us no good at this meeting, and that we recommend that a committee be appointed here to draft a suitable constitution and by-laws to be presented for adoption at the next annual meeting. I make that motion, and that the committee be discharged and a new committee be appointed and instructed in regard to its duties. Motion carried.

The chair then proceeded to appoint as such committee the following-named gentlemen : J. Fred. Waggoner, J. E. Moseley, Alex. McNie.

The Chairman : It will be proper at this time to take up the discussion of the adoption of a resolution reaffirming the resolutions passed at our last annual meeting, but you are all aware we adjourned for the purpose of securing the attendance of many persons who are not with us at this time. It will be necessary, however, to take some action early toward the appointment, I suppose, of a committee on permanent organization, or upon the names of officers for the ensuing year. Also, it will be proper for us to make a selection of such a committee as will make an effort, and a greater effort than that made by many members of the committee last year, to secure the membership of the trade throughout the Northwest. As has been stated before, it is useless for a few members of the book trade to attempt to regulate the book trade of the Northwest. I think we have only 87 signatures. We should have a greater number than that from each State in the Northwest.

Mr. Watson moved that a committee of three on permanent organization and for the nomination of officers be appointed by the chair. Carried.

The chair then appointed as such committee : Messrs. Sutherland, Crume and Watson, who reported the following list of officers: President, R. H. Allen, Iowa City, Iowa; vice-president, C. W. Eaton, Grand Rapids, Mich.; secretary and treasurer, True S. White, St. Paul, Minn. Executive Committee: S. A. Maxwell, Chicago, Ill.; G. B. Grosvenor, Dubuque, Iowa; Timothy Nicholson, Richmond, Ind.; Boughton, Hannibal, Mo.; James E. Moseley, Madison, Wis. Co-operative Committee (by States): For Minnesota—C. D. Whiteall, Minneapolis. Iowa—Mr. Thompson, Davenport. Wisconsin—W. J. Park, Madison. Illinois—Robert Shields, Bloomington. Missouri—H. T. Brooks, Mexico. Michigan—H. G. Allen, Grand Rapids. Indiana—P. M. Crume, Peru. Colorado—H. E. Hopper, Denver. Nebraska—J. S. Caulfield, Omaha. Ohio—T. J. Brown, Toledo. Kansas—B. B. Crew, Leavenworth. Utah — James Dwyer, Salt Lake City. Wyoming Territory—G. L. Holt, Cheyenne. Dakota Territory — E. A. Grant, Fargo.

The report of the committee was adopted.

The chair stated that the matter of consideration of the relation of the booksellers and publishers, which was before the convention prior to the adjournment, was in order, and called for the resolution as offered by the committee.

The Secretary—The resolutions referred to are the resolutions adopted last year :

Resolved, That in the opinion of this committee, it is for the interests of publishers that their books be supplied to the public through the local bookseller, and that a book store, therefore, should be maintained in every community.

The Chairman called for the report of the Committee on Miscellaneous and Juvenile Books, which submitted the following :

Resolved, That we re-affirm the resolutions adopted at the last annual convention in relation to discounts by publishers and jobbers to private purchasers. And we earnestly request them to adopt and adhere strictly to our action then taken.

The resolutions were adopted and the association adjourned.

For mantel lambrequins the pleasantest summer work is done on the new coarse linen canvas called Aida canvas, and wrought in double cross stitches with single zephyr wool. This work grows rapidly, and is simple and easily done. The fringe is knotted when bought, and the needle-woman ties in wools of different colors in each strand of the fringe ; a border of drawn-work is also completed above the fringe. Heavier felt lambrequins are ornamented with couching in large stars, red, olive and old dull-blue, on olive, brown or gray felt. For ornamenting a long cover for the top of a buffet fruit designs are much used, such as bunches of cherries, clusters of strawberries, or blackberries strewn all about, or else there is a large fruit piece on each end ; while others have designs of fish, punch-bowls, a trussed turkey, oysters on the half-shell, or perhaps a plum-pudding is represented with brandy burning upon it.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, July 19, 1882.

THE MONEY MARKET.—The money market shows continued ease. Call loans range from 1½ to 2 per cent. on government collateral, and 2½@4 per cent. on miscellaneous stocks, while the discount rates for prime mercantile paper are 4@6 per cent. The highest rate for loans extending to January is 5 @6 per cent. on stock collateral. The stock market has maintained its buoyancy in spite of predictions that a reaction was at hand. All classes of securities have been in active demand, even more so than last week, and the bullish temper of the list is as conspicuous as ever. Government bonds were strong. The extended 6s advanced 1 per cent. and the 4s and 4½s ⅛ each. Railroad bonds were active and strong.

THE PAPER MARKET.—Business continues at about the usual midsummer proportions, and although stocks of most grades in the hands of dealers may be growing excessive, prices are sustained with the expectation that the demand in the fall will be sufficiently extended to absorb all of the surplus on the market. Manufacturers, as a general thing, continue well supplied with orders, and it is only the exception, and not the rule, where prices are cut very low in order to afford constant employment for their mills during the remainder of the summer. The straw wrapping manufacturers met at Albany last week, but the representation at the meeting fell short of 80 per cent. of the total production, and nothing was effected beyond an informal understanding to close down the mills during a portion of this and next month.

THE STATIONERY MARKET.—Business has shown a little improvement during the past week, but this is only as compared with previous weeks. No very great activity is looked for until the beginning of next month, when the fall trade, it is expected, will be under full headway. Out-of-town buyers are coming in to the city daily, but they seem to be doing considerable looking around for goods, and are not, as yet, purchasing to any great extent. There is a very encouraging feeling expressed both by buyers and sellers as to the prospects for fall trade. Some of the fancy goods people appear to be very busy filling orders from the trade at the South and Northwest, and in instances report their sales larger than at the corresponding time in any former season. Staple goods have undergone no change. The difficulty in the envelope combination is said to be adjusted, and the November price list will be adhered to for the present.

JOHN GIBSON, 82 and 84 Beekman Street, New York.

Advertising, Sunday and Day School Reward Cards, Blank Notes, Drafts, Checks and Marriage Certificates.

ENGLISH HAND-MADE PAPERS

ORIGINAL EYNSFORD MILLS,

WATER-MARK:

"FELLOWS"

KENT, ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers.

For Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

Proprietor: JOSEPH ARNOLD, Eynsford Mills, KENT, ENGLAND.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

OBITUARY.

JOHN R. NUNEMACHER.

The death of John R. Nunemacher, an old stationer and printer of New Albany, Ind., died on July 13, of paralysis, aged fifty-eight years. He was stricken with paralysis about a year ago, but the stroke being light he continued his business, although friends urged him to take a rest. About three weeks ago a second stroke came, which ended in death.

John R. Nunemacher was a native of Carlisle, Pennsylvania, where he was born in 1824. He moved to Chambersburg with his parents when an infant, and then to Washington, Indiana. About the year 1836 the father of Mr. Nunemacher moved to this city, where deceased resided continuously up to the time of his death. He embarked in the book and stationery business, when a young man, at the corner where his book and job printing house now stands, and was a most successful business man. John R. Nunemacher was married to Vista Shields, sister of James G. Shields and Mrs. W. C. Crane, by whom he had a number of children, five of whom survive, viz.: Walter Nunemacher, Frank Nunemacher, Mary Nunemacher, Emma Carlton, of Indianapolis, and Grace Nunemacher. As a business man deceased was accurate and correct. In the social circle he was entertaining and agreeable, being possessed of a vast fund of information which he could impart with much precision and accuracy. Those who knew him well found him possessed of the kindliest impulses and the most generous sympathies for those in trouble. He was a man of the strictest integrity of character.

The Lockwood Press has been awarded one gold and three silver medals at the Christchurch, N. Z., International Exhibition.

PATENTS
E. B. STOCKING, Att'y-at-Law,
615 7th Street,
WASHINGTON, D. C.

Extended experience in Soliciting United States and Foreign Patents, prior and subsequent to service in the Examining Corps of the U. S. Patent Office; practical and theoretical knowledge of the mechanic arts, personal attention to the interests of clients. Office directly opposite Patent-Office.

Send sketch or model of your invention and receive WITHOUT CHARGE, a report as to patentability and cost of securing patent. If the invention is REPORTED patentable no attorneys' fee will be charged unless a patent is allowed therefore you can rely on the report. REFERENCES furnished on application. Special attention to rejected cases. Proper amendment often secures a patent. Send me written request that Commissioner of Patents allow me to see your rejected application, and I will report prospect without charge.

C AND N-W RAILWAY

The Chicago & Northwestern Railway

Is the OLDEST! BEST CONSTRUCTED! BEST EQUIPPED! and hence the *Leading Railway of the West and Northwest*

It is the short and best route between Chicago and all points in Northern Illinois, Iowa, Dakota, Wyoming, Nebraska, California, Oregon, Arizona, Utah, Colorada, Idaho, Montana, Nevada, and for *Council Bluffs, Omaha, Denver, Leadville, Salt Lake, San Francisco, Deadwood, Sioux City,* Cedar Rapids, Des Moines, Columbus, and all Points in the Territories, and the West. Also, for Milwaukee, Waukesha, Green Bay, Oshkosh, Sheboygan, Marquette, Fond du Lac, Watertown, Houghton, Neenah, Menasha, St. Paul, Minneapolis, Huron, Volga, Fargo, Bismarck, Winona, La Crosse, Owatonna, and all points in Minnesota, Dakoto, Wisconsin, and the Northwest.

At Council Bluffs the Trains of the Chicago and Northwestern and the U. P. Railways depart from, arrive at and use the same joint Union Depot.

At Chicago, close connections are made with the Lake Shore, Michigan Central, Baltimore and Ohio, Ft. Wayne and Pennsylvania, and Chicago and Grand Trunk Railways, and the Kankakee and Pan Handle Routes. Close connections made at Junction Points.

It is the *Only Line* running the CELEBRATED NORTHWESTERN DINING CARS West or Northwest of *Chicago.* Pullman Sleepers on all Night Trains.

Insist upon Ticket Agents selling you Tickets via this road. Examine your Tickets, and refuse to buy if they do not read over the Chicago and Northwestern Railway.

If you wish the Best Traveling Accommodations you will buy your Tickets by this route, ☞ AND WILL TAKE NONE OTHER.

All Ticket Agents sell Tickets by this Line.

Philadelphia Office, 121 South Eleventh Street.

JOHN WALKER & CO.,

96 FARRINGDON STREET, LONDON, E. C.

Christmas and New Year, Wedding and Birthday

SOUVENIRS.

An ENTIRE LINE OF NOVELTIES in the above will shortly be ready. Prices ranging from 5s. to £5 5s. each, retail.

CHRISTMAS SOUVENIRS.—"Messrs. John Walker & Co. have struck out for themselves a new line in Christmas Cards, radically different from anything yet shown. We are forced to allude to the goods as "Christmas Cards," but they bear about the same relation to cards as a gold watch does to a German-silver toothpick. The souvenirs are beautiful miniatures on ivory, single, or in sets of two, three or four, enclosed in sumptuous cases of satin, velvet or morocco, a little in the nature of photograph albums, but very little like anything that has ever before been offered to the trade. Prices are from five shillings to five guineas. The oft-repeated question, "What shall I do with it?" will never be asked by the fortunate receivers of these souvenirs. They are of substantial size, great richness, and obvious worth as productions of art. Retail stationers who have or can make a market for these superb goods will have the satisfaction of knowing that the most severely critical of their customers can have no fault to find, and that they are offering something which will do credit to their own good taste."—*Stationery Trades Journal.*

Improved Bookbinders' Machinery & Tools,

CHICAGO, ILL.

STILL ANOTHER IMPROVEMENT IN

ROLLER BACKING MACHINES.

(PATENT PENDING.)

By the use of our new Improved Roller Backer you can back a LARGE or SMALL quantity of books, of different sizes, as the Roller is adjusted by turning the handle on right, which runs the steel-cut beveled gears, and carries the Roller up or down very rapid and true every time, for any thickness of books, the first time, thereby saving great time and labor. There is no strain on the thread that carries the Roller. This is the only Roller Backer made which can be adjusted for a few books without a great deal of time and trouble.

This machine is built in a very superior manner, with steel connections, and the holes are reamed out; steel jaws, and made extra heavy for hard work. It has a triple spring for rest on back, to prevent the jar of the whole body in running the Roller clear back. This machine is pronounced, where in use, to be the strongest and quickest adjusted machine ever made. Can be adjusted from a 4-inch book to a ¼-inch book instantly, ready to make a TRUE BACK without loss of time, and the workman cannot but make a true back on every book.

Length of Jaw, 18 inches. Price, $325.

REYNOLDS & REYNOLDS.

FALL SPECIALTIES, SCHOOL SUPPLIES

The best line of Composition and Scratch Books ever offered. We **Manufacture Every Book we Sell.**

☞ Set of Samples, consisting of 20 Books, delivered free for $1.75. The Samples themselves will retail in any store for $3.00. No two alike.

BYRON WESTON

DALTON, MASS., U. S. A.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot. Each sheet is water-marked with name and date.**

The American Stationer

A Journal Devoted to the Interests of the Stationery & Fancy Goods Trades

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. XII.---NO. 4. NEW YORK, JULY 27, 1882. WHOLE NO. 370.

Correspondence.

CINCINNATI CHIT CHAT.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., July 24, 1882.

Another of the fateful weeks of the year has passed and the record is favorable. Millions of dollars have been depending on these July weeks in this latitude, for they were to make or mar the wheat harvest, and to do much toward fixing the status of the corn crop. Happily there has been good weather—warm and dry enough to enable farmers to safely house or stack their wheat, and at the same time there have been enough showers to bring along the corn nicely. Then there is no end of vegetables and fruit all over the hungry country that must be bought and sold, for as I said the whole country is hungry after six months or more of starvation prices for meat and vegetables and fruit. Potatoes retailed here for over three dollars a bushel six weeks ago. They are less than a dollar now. From this it must be apparent that good times are inevitable. They always begin at the farm. Farmers are certain to have money in abundance, and the dear good souls will gladly put it in circulation in the purchase of comforts and luxuries for their families. Wheat is coming into this market now at the rate of over a hundred thousand bushels a day. That means cash to farmers, and business for railroads. All the traveling men who have been here for the past week give glowing accounts of the prospects for business this coming fall, and they generally base them on the abundant crops. There is nobody here prepared to maintain the opposite.

Robert Clarke & Co. have published a handsomely illustrated 12mo volume on "Forestry and the Cultivation of Trees," by Dr. Franklin B. Hough, Ph. D., of the Forestry Division of the United States Department of Agriculture. It will doubtless have a wide circulation, judging from the interest in forestry aroused here by the national congress last April.

W. B. Carpenter & Co. know no holiday season. They are always ready to enlarge business when there is a call. Just now they have assumed the exclusive right in this city and vicinity to manufacture blank books with the removable cover, owned by the Removable Blank Book Cover Company, which has removed to Chicago. Carpenter & Co. have also begun selling inks and mucilage bearing their own label, which must be a guaranty as to quality. They have issued a handsome advertising memorandum book, which is a model of compactness and neatness, and looks just like it belongd to such an establishment as Carpenter presides over.

Among the summer wanderers must be added the name of A. Howard Hinkle, of Van Antwerp, Bragg & Co., who has gone to the Isles of Shoals with his family.

A Cincinnati artist in photo-lithography, or something similar thereto, has the contract for furnishing plates of copies of paintings to be exhibited at the coming Industrial Exposition. These plates are to be used to illustrate the art catalogue, and are to be of the finest workmanship. The artist is Otto Reich, whose spirited work in the late musical festival programme book was so much admired.

That trade is sure to be prosperous, may be inferred from this list of visitors who have recently called here: Frank Thayer, Boston; A. J. Schad, of Geo. W. Cross Blank Book Manufacturing Company, Saugerties, N. Y.; W. F. Classon, of Plimpton Manufacturing Company, Hartford; Wm. Clogston, of Powers Paper Company, Springfield; Chas. C. Hall, Syracuse, N. Y.; J. B. Gunn, of E. Faber, N. Y.; Mr. Phillips, of B. Illfelder & Co., N. Y.; Chas. Gasquoine, of A. H. Andrews & Co., Chicago; Mr. James, of Daniel Slote & Co., N. Y.; Geo. Freeman, American Lead Pencil Company, N. Y.; Mr. Sears, Acme Stationery Company, N. Y.

PRINCE WILLIAM.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., July 25, 1882.

What with the hot weather, the general dullness in all departments of trade, and the absence of a portion of the population from home, business among the stationers is only fair to middling; but in volume it is fully as large as it was a year ago this time. None complain, but it wouldn't do them any good if they did.

The feeling among the trade is that business will be booming in the fall, and will open fully as early as it did last year. Advices from correspondents and others is to this effect, and this corresponds with what the dry goods and other people say respecting next fall's trade prospects.

Stocks here at the present time are getting somewhat low, but still assortments are fair for the season. Nobody is anxious to stock up heavily just now.

Among the art publishers, Bufford's Sons are getting out some new and unique designs in the advertising line, and this house seems to excel in this respect. It is evident that it has a sharp eye on just those things that would take well in business—and art and business seem to be wonderfully mingled nowadays. Business has its æsthetic features decidedly, even salt codfish and beans boasting of their illuminated attractions.

Art novelties for the next holidays will be more numerous, elegant, and (in some cases) more expensive than ever before, but very fine work will be afforded at surprisingly low rates. It is believed that this department of art is only in its infancy. Orders for these goods will be in order next month, or in September, and first come first served.

The retail trade holds up well considering the season, and the nearby jobbing trade is only for keeping up assortments. The run on fancy papers and envelopes to match continues; probably on account of "vacation" correspondence. I do not know how it is in other sections, but there are more closed residences in Boston this season than for some years; and in this connection a popular dealer told me that he sold more stationery this season than he had ever before in the history of his business.

When the crowds return home they will be in search of new novelties in stationery, and I presume they will find just what they want—something nice and elegant.

I was mistaken. The *World* "still lives."

The *Star*—an evening cent paper—talks of publishing a morning edition.

I hear that a new free-trade paper is talked of here.

Publishers complain of the quality of their paper. They say that there is too much wood pulp in it.

The second exhibition of the Manufacturers and Mechanics' Institute Fair will afford the printers an unusual opportunity to show their skill in the "art preservative."

L.

ART METAL-WORK OF JAPAN.

For centuries past the artists of Japan have earned for themselves a reputation for their skill in the working of metals, and at the present day their productions in bronze, iron and steel excite admiration and astonishment. This art industry is of extreme antiquity. Mr. Satow, in his recent hand-book of Central and Northern Japan, describes the colossal image of Buddha at Nara. It was first cast in 749 A. D., and was set up in its present position. It suffered from various accidents, and in 1567 the temple was burned to the ground, the head of the image falling off. It was replaced not long afterward, and we may therefore assign to the body an age of eleven hundred and forty years, and to the head about three hundred years. Buddha is represented sitting cross-

legged on a dais, which is of bronze and represents the calyx of a lotus. The figure is 53½ feet high; the face is 16 feet long and 9½ wide, while 966 curls adorn the head, around which is a halo 78 feet in diameter, on which are images 8 feet in length. A roof protects the image, and a staging is erected to assist visitors in examining it. The casting is said to have been attempted seven times before it was accomplished, and three thousand tons of charcoal were used in the operation. The whole is said to weigh four hundred and fifty tons, and the alloy is composed of :

Gold.....lbs.	500
Mercury	1,954
Tin	16,827
Copper	986,080

"The body of the image and all the most ancient part of the lotus flowers on which it is seated are apparently formed of plates of bronze ten inches by twelve, soldered together, except the modern parts, which are much larger castings. A peculiar method of construction is said to have been adopted, namely, of gradually building up the walls of the mold as the lower part of the casting cooled, instead of constructing the whole mold first, and then making the casting in a single piece." The other large image of Dai Butsu at Kamakura, near Yokohama, is somewhat smaller than this, and dates from a period three centuries more recent. The various temple bells, some of which are of great size, are remarkable for the sweetness and mellowness of their tones, which contrast greatly with the harsh, clanging sounds to which we are accustomed in Europe. They are struck on the outside by huge pine beams which are suspended by strong ropes. The vessels ordinarily used in worship, such as vases, lamps, and incense-burners, are also of bronze, many of them being fine specimens of art, executed in high relief, and finished with much care. The demand for art metal-work of a high order has thus existed for centuries in Japan; and so far as can be judged from the specimens of more modern work of this description, the hand of the Japanese workman has not lost its cunning. In the Japanese art gallery in Grafton street, among many rare and beautiful productions of the Land of the Rising Sun, the metal-work well deserves attention. A pair of dark, green-tinted bronze vases, fourteen inches high, inlaid with gold, are conspicuous for beauty of design and workmanship. They are said to have occupied the maker seven years, and their curious tint is said to be a trade secret. It must be understood that it is no mere surface coloring, but is produced by the mixture of the metals in certain proportions. The work on the rims and necks represent in gold inlay a cloud dragon, while the bodies are decorated with four medallions formed of gold and silver inlays, the shading obtained by an inlay of gold upon silver being very remarkable. The tints of bronzes vary in color and depth from yellow, green and ruddy to dark brown, and next to beauty of design, the tint is a *sine qua non*. A favorite design on bronzes is the dragon, a subject which is treated with much force and character.

A plaque of *shakudo*—an alloy of gold and copper, and black in color—set in a bronze mounting, representing the bamboo, is remarkable as showing the care and labor expended by the Japanese artist in working out details. The design represents a meeting between the twelve chief disciples of Buddha; the inlaying of the figures, trees, flowers, &c., is of gold and silver, with various tinted compositions, and stands out from the dark background of the alloy with much brilliancy. One of the compositions employed for shading is called *shibu-ichi*, and consists of three parts of copper to one of silver. Both these alloys are favorite compositions of the Japanese artist. The minute interlaying of gold and silver in another plaque about eighteen inches in diameter, with a curvilinear border, exhibits marvelous skill. The body of the plaque is of iron, and the border is adorned with grape-leaf and fruit patterns, the former being of gold, the latter of silver. This is the work of Komai, of Kioto, whose family held the office of sword-mounters to the court. Swords in the olden time were much prized by their owners for the quality and temper of the steel, and much cost was lavished on the ornaments of the handles and sheaths. The making of a good sword was regarded as a very serious task, and the maker had to conform to certain rules of conduct from the commencement to the end of the operation. The external ornaments offered endless scope to the skill and care of the worker in metals. Great importance is attached to the maker's name, which is engraved above the guard. It was a common saying of the Japanese that the swords of celebrated makers, such as Naminohira, Yukiyasu, Masamune, and others, could not return to their scabbards unless they had been dipped in blood. The sword-maker's occupation is now gone; not so their fellow artists, the sword-mounters. Their skill in working metals can always be turned to good account.

Many other works in metal in the gallery deserve mention, but we cannot refer to them here. They all exhibit the patience, skill, imagination and love of his craft which distinguish the Japanese artist of old. It is to be feared that he is now abandoning these qualities and seeking a more rapid road to fortune by shoddy foreign imitations, and that beautiful works requiring the patience and loving care of years—such, for instance, as the small cabinet shown in Grafton street, which was made for the third shogun of the last dynasty, and which is probably the finest work of its kind in existence—will soon be things of the past.—*Nature.*

ADULTERATION.

A German paper narrates the following story : "There were once four flies, and, as it happened, they were hungry one morning. The first settled upon a sausage of singularly appetizing appearance, and made a hearty meal. But he speedily died of intestinal inflammation, for the sausage was adulterated with aniline. The second fly breakfasted upon flour, and forthwith succumbed to contraction of the stomach, owing to the inordinate quantity of alum with which the flour had been adulterated. The third fly was slaking his thirst with the contents of the milk jug, when violent cramps suddenly convulsed his frame, and he soon gave up the ghost, a victim to chalk adulteration. Seeing this, the fourth fly, muttering to himself, 'The sooner it's over the sooner to sleep,' alighted upon a moistened sheet of paper, exhibiting the counterfeit presentment of a death's head and the inscription: 'Fly Poison.' Applying the tip of his probosis to this device, the fourth fly drank to his heart's content, growing more vigorous and cheerful at every mouthful, although expectant of his end. But he did not die. On the contrary, he throve and waxed fat. You see, even the fly poison was adulterated."

WRITTEN NEWSPAPERS.

The desire of news from the capital, on the part of the wealthier country residents, and probably the false information and the impertinence of the news-writers, led to the common establishment of a very curious trade—that of a news correspondent, who, for a subscription of three or four pounds per annum, wrote a letter of news every post day to his subscriber in the country. This profession probably existed in the reign of James I.; for in Ben Jonson's play, "The Staple of News," written in the first year of Charles I., we have a very curious and amusing description of an office of news manufactures :

> This is the outer room where my clerks sit,
> And keep their sides, the Register i' the midst ;
> The Examiner, he sits private there, within ;
> And here I have my several rolls and files
> Of news by the alphabet, and all put up
> Under their heads.

The news thus communicated appears to have fallen into as much disrepute as the public news. In the advertisement announcing the first number of the *Evening Post* (September 6, 1709), it is said : "There must be three or four pound per annum paid by those gentlemen who are out of town, for written news, which is so far, generally, from having any probability of matter of fact in it, that it is frequently stuffed up with a 'We hear, &c.;' or 'An eminent Jew merchant has received a letter, &c.,' being nothing more than downright fiction." The same advertisement, speaking of the published papers, says : "We read more of our own affairs in the Dutch papers than in any of our own." The trade of a news correspondent seems to have suggested a sort of union of written news and published news, for toward the end of the seventeenth century we have *news-letters* printed in type to imitate writing. The most famous of these was that commenced by Ichabod Dawks, in 1696, the first number of which was thus announced : "This letter will be done upon good writing-paper, and blank space left, that any gentleman may write his own private business. It does undoubtedly exceed the best of the *written news*, contains double the quantity, is read with abundance more ease and pleasure, and will be useful to improve the younger sort in writing a curious hand."—*Companion to the Newspaper.*

EVANS & GARDNER, 43 Elm St., New York,

Manufacturers of Rubber and Metal Stationery Specialties.

☞ SOLE AGENTS FOR EXCELSIOR PENCIL SHARPENERS.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President. **DALTON, MASS., U. S. A.** JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show.

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

☞ ANNOUNCEMENT. ☜

WE beg leave to announce the completion of our line of CHRISTMAS and NEW YEAR CARDS for the Season 1882-1883, for which our Agents will commence to solicit orders in May. We feel confident that the popularity which our Cards have enjoyed in former seasons will again be secured by the efforts we have made to bring out a line in advance of all our previous productions. The names of the Artists who have contributed designs is proof of our continued efforts to reach the highest excellence. We will name only the following:

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,

MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

Due regard has again been paid to the literary matter in connection with the designs, and many of the latter are accompanied by original poems, from writers of note, such as MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

Fringed Cards—All furnished with envelopes and protectors.
Envelopes—Furnished without extra charge for all cards for which the list price is $1.80 and over.
Backs have been specially designed for our cards, adding an attractive feature to them.

Bird Cards, by Miss F. Bridges, Mrs. O. E. Whitney and others
Figure Cards, by Miss L. B. Humphrey, Miss Rosina Emmet, Miss L. B. Comins, Alexander Sandier and others.
Flower Cards, by Mrs. O. E. Whitney and others.
Fan Cards, by Mrs. O. E. Whitney, in new styles.

PRANG'S PRIZE CHRISTMAS CARDS.

THIRD COMPETITION

FIRST.—Artists' and Popular Prize Card ($2,000), by Miss Dora Wheeler,

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW PATENTS.

No. 260,733. Copying Press.—Leonard Bailey, Hartford, Conn.

No. 260,792. Printing Press.—Alfred Shedlock, New York, assignor to George P. Byrne, trustee, Brooklyn, N. Y.

In a printing press, a stationary, irregularly-formed ink-distributing and chase-holding body, having at each end an irregularly-formed flange-cam, in combination with two ink-rollers and their carriers, provided with bearing-rollers adapted to work on the internal faces of the cams and hold the ink-rollers firmly to the periphery of the body in all positions.

No. 260,800. Paper-Box Machine.—Frank H. Strieby and Matthew Rankin, Cleveland, Ohio.

No. 260,821. Printer's Shooting-Stick.—Frank L. Armstrong, Philadelphia, Pa.

A shooting-stick in which a stem, having at the lower end projections, is combined with a weight, and a sliding rod, guided on or in the stem.

No. 260,868. Combined Chain-Bar and Pencil.—William S. Hicks, New York, N. Y.

A chain-bar consisting of an open-ended tube and a detachable pencil or other implement case, arranged to fit therein and project at each end thereof.

No. 260,945. Delivery Apparatus for Printing-Presses.—Calvert B. Cottrell, Westerly, R. I.

In a cylinder printing-press, the combination, with the impression cylinder, receiving-table and delivery-grippers, of gripper-carrying rods, each composed of two jointed sections and capable of folding or flexure, slides connected with the rear sections of the rods, guides for the slides, and supports on which the forward sections of the rods move longitudinally and operate as levers.

No. 260,951. Combined Pen or Pencil Holder and Drawer-Pull.—Abner Cutler, Buffalo, N. Y.

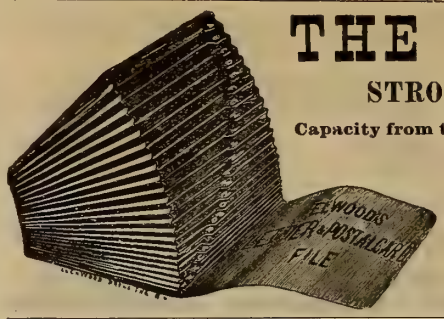
A combined pen or pencil holder and drawer-pull, adapted to be secured to the drawer of a desk, and provided with an upper recess or groove for the reception of pens or pencils, and an under recess or groove, by means of which the drawer can be pulled out.

No. 260,987. Mechanical Toy.—Edward R. Ives, Bridgeport, Conn., assignor to Ives, Blakeslee & Co., same place and New York, N. Y.

No. 261,000. Adjustable Easel.—Watson F. Lamb, Brooklyn, N. Y.

No. 261,024. Addressing Machine.—Martin M. Morrison, Kansas City, Mo.

No. 261,025. Hand Stamp.—James Murdock, Jr., Cincinnati, Ohio.



A countersunk metallic plate, a conical-headed pin put through and soldered to the plate and having a threaded projection, a cup-shaped ferrule soldered to the plate, and a disk of solder within the ferrule united to the ferrule and to the conical-headed threaded pin.

No. 261,031. Wall-Paper Carrier.—William J. Palmer, Flushing, N. Y.

No. 261,084. Sheet-Delivery Apparatus for Printing Machines.—Luther C. Crowell, Brooklyn, N. Y.

A rotary cylinder or carrier provided with means for collecting sheets upon its surface, in combination with mechanism for severing the sheets from the web while upon the surface of the cylinder or carrier.

No. 261,111. Temporary Binder for Memorandum-Books. John R. Weber, Bloomington, Ill., assignor of one half to the Leader Publishing Company, same place.

STILL ANOTHER IMPROVEMENT IN

(PATENT PENDING.)

ROLLER BACKING MACHINES.

By the use of our new Improved Roller Backer you can back a LARGE or SMALL quantity of books, of different sizes, as the Roller is adjusted by turning the handle on right, which runs the steel-cut beveled gears, and carries the Roller up or down very rapid and true every time, for any thickness of books, the first time, thereby saving great time and labor. There is no strain on the thread that carries the Roller. This is the only Roller Backer made which can be adjusted for a few books without a great deal of time and trouble.

This machine is built in a very superior manner, with steel connections, and the holes are reamed out; steel jaws, and made extra heavy for hard work. It has a triple spring for rest on back, to prevent the jar of the whole body in running the Roller clear back. This machine is pronounced, where in use, to be the strongest and quickest adjusted machine ever made. Can be adjusted from a 4-inch book to a ¼-inch book instantly, ready to make a TRUE BACK without loss of time, and the workman cannot but make a true back on every book.

Length of Jaw, 18 inches. Price, $325.

REYNOLDS & REYNOLDS.

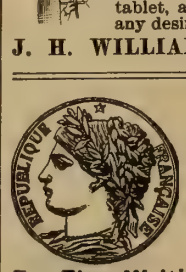
WILLIAMSON'S MAGIC POLE



For taking down from high piles, or shelves, or putting up in high places, any kind of box having a projecting lid. Delivered to any point in the United States except the Pacific Slope, for $1.25. Liberal Discount to the Trade to sell again.

Patented July 12, 1881.

WILLIAMSON'S GRIP TABLET.

The GRIP TABLET is a case to hold from 1 to 150 loose sheets of Note Heads, Letter Heads, &c., binding them at once into tablet form, or blocks, without the use of glue, paste or any other contrivance, which mars the beauty of a well printed sheet, and is no larger than an ordinary tablet, and is renewable; the sheets are simply drawn out. Inclose 25 cents for a sample of any desired size.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

J. M. Fowler, printer, New York city, is dead.

James Somerville, bookbinder, New York city, is dead.

The fancy card trade expect a great competition this season.

Robert D. Patterson, of St. Louis, is taking in Atlantic City this week.

M. Spencer, bookseller and stationer, Holton, Kan., is advertising to sell out.

J. W. Lyon has recovered judgment against George T. Patterson for $267.81.

E. J. Edwards has succeeded W. G. Miller, publisher of the *Tulare Times*, Visalia, Cal.

A. O. Greenwalt, publisher of the *Monroe County Democrat*, Stroudsburg, Pa., has sold out.

J. F. Kennedy, bookseller, &c., and the *Democrat* Office, Colfax, W. T., were recently burned out.

The stock of the Springfield Glazed Paper Company, Springfield, Mass., has been damaged by fire.

A. B. Steinberger, publisher of the *Courant*, Winfield, Kan., has sold out to Rembaugh & Davis.

The Rochester News Company has been formed at Rochester, N. Y., and is located at 43 Joiner street.

The Toronto Lithographing Company (not incorporated), Toronto, Ont., has been partly burned out. Fully insured.

T. H. Payne & Co., Chattanooga, Tenn., have published a very interesting, illustrated and descriptive "Guide to Chattanooga."

J. W. & F. H. Roberts, publishers of the *Independent*, Oskaloosa, Kan., have dissolved partnership, and are succeeded by F. H. Roberts.

Bacon & McCord, booksellers, stationers and job printers, Pittsburg, Pa., have dissolved partnership; each member of the firm continues alone.

Henry Levy & Son are receiving a great variety of goods, which they are opening and sampling for the fall trade. Particulars of them will be given in future issues of THE STATIONER.

J. W. Webster & Co., wholesale stationers, Kingston, Ont., have dissolved partnership. D. H. Webster has retired, and J. J. Bates has been admitted, the firm style now being Webster, Bates & Co.

Since Henry L. Booraem has assumed the position of secretary of the Stationers' Board of Trade general satisfaction has been expressed by the members at the conduct of its business. All who apply at its collection department for information are treated in the most courteous manner.

At the adjourned meeting of envelope manufacturers held at Springfield on Saturday, the preliminary arrangements looking to a compromise of the conflicting interests brought forward at the preceding meeting, were put into binding effect. The Standard Envelope Company was fully organized at this meeting by the election of L. J. Powers, president; E. Morgan, treasurer, and Mr. Bill, secretary.

Myers Brothers are in receipt of the sample book of Poulton & Son, of Lee, which they will be happy to show the trade at their warerooms, 62 John street. Poulton & Son have outdone all of their previous efforts in quantity and variety. Their sample book is very large, including extra large size boudoir promenades, Malvern, a new intermediate size, cabinets, and C. D. V.'s. The children's subjects are among the most charming yet seen. The precocious steadiness with which they must have submitted to the photographic ordeal is surprising. Attitudes and general grouping are commendably easy and natural, and the backgrounds are uniformly well filled in. The flower cards, especially those in which the hands are introduced, are all excellent in their way. Some of their productions comprise figures of children, cabinet size, very interesting in subject—flower girls and the like, and different from the ordinary class of cards offered for the purpose. An appropriate verse, in gilt lettering, is added underneath. Another series contains birthday groups of children, playing by the seashore, &c. Another series gives us a selection of landscapes—Windermere, Marple in Cheshire, and other places being represented, with suitable verses from Wordsworth, Keats, Burns and Scott. These photographs are all especially worth attention. The groupings are new and effective, and many of the pictures are now employed for the first time as subjects for cards of this kind.

Among the visiting members of the trade in the city during the past week were: Hugh R. Hildreth, of St. Louis; Mr. Nelson, of Nelson Brothers, Grand Rapids, Mich.; Mr. Wyman, of Wyman, Mullen & Co., Minneapolis, Minn.; Stephen Tongue, of J. B. Piet & Co., Baltimore, Md.; F. F. Hansell and Julius Meyer, of New Orleans; Edward Perry, Charleston, S. C.; S. C. Andrews, Ann Arbor, Mich.; William Terry, of William Terry & Co., Galveston, Tex.; Mr. Frank, of Frank, Goldsmith & Co., San Francisco, Cal.; Mr. Evans, of Evans & Spencer, Salt Lake City, Utah, and Mr. Udell, of Udell, Schmieding & Co., St. Louis, Mo.

The Steam Color Stamping Company, of this city, challenges any other engraving concern in the country to turn out from steel dies as many perfect impressions in a day's work as it can accomplish. So perfect is its work, it is claimed, that in ten thousand impressions it would be difficult to distinguish any difference between one impression and any other.

Judgments have been recorded during the past week against Harwood & Beckwith, dealers in toys, who recently failed, and in favor of E. I. Horseman for $398.01; Stern & Lyon, $761.31, and American Net and Twine Company for $708.95.

The automatic wire-stitching machine, offered to the trade by W. H. Hasbrouck, 91 Liberty street, New York, is said to be meeting with great success abroad, its sales in foreign countries increasing constantly.

Charles J. Cohen, of Philadelphia, has issued his catalogue of school and commercial stationery for the autumn of 1882. It is a very complete and interesting publication for the trade.

Max Fishel, dealer in fancy goods, Deadwood, Dak., has admitted Adolph Fishel to partnership, under the style of Fishel Brothers.

W. Grundy, bookseller and stationer, Lucan, Ont., has sold out to his brother, Thomas Grundy.

Marseilles & Morrill, printers, Exeter, N. H., have dissolved partnership. Mr. Morrill continues.

Phil. Bohnett, printer, Cincinnati, Ohio., has gone out of business.

G. Boegle, bookseller and stationer, Virginia City, Nev., is closing out.

Hereford & Coleman, publishers, El Paso, Ill., have dissolved partnership.

S. P. Metcalf, bookseller and stationer, Olathe, Kan., is advertising to sell out.

H. M. Bennett, publisher of the *News*, Wellsville, Kan., is advertising to sell out.

Lawrence & Jordan have succeeded John H. Lawrence in the printing business at Rochester, N. Y.

Samuel Raynor and daughter are expected home this week from Europe by the steamer City of Rome.

Fred. L. Huntington, stationer, Malone, N. Y., has made an assignment to J. Folsan. Liabilities, $1,000, with small assets.

Frost & Shinn, publishers of the *Ford County Globe*, Dodge City, Kan., have dissolved partnership. D. M. Frost continues.

The De Witt Wire Cloth Company has recovered a judgment against Henry Louison, late manufacturer, Whipany, N. J., for $100.84.

W. Irwin Martin, of Samuel Raynor & Co., attended the American Paper-Makers' Association annual meeting at Saratoga yesterday.

Geo. and Walter Parrish, Owensboro, Ky., dedicated their new store on last Thursday evening. THE STATIONER was given a kindly invitation to be present. The firm acknowledges the receipt of a number of presents for office use from its friends. This list contains the names of a number of well-known houses in this and other cities.

Welcome indeed, must "Our Little Ones" (The Russell Publishing Company, Boston), be each month to the children who are fortunate enough to receive it. The August number, like its predecessors, is full of entertaining reading, short sketches, pretty stories, and simple verses, with abundant illustrations, beautifully printed, give this serial the right to rank among the superior publications of its class.

The employees of Jas. D. Whitmore & Co. had their sixth annual picnic, at New Washington Park, on Tuesday evening. Wm. H. Fox is president of the Association, and J. Crawford, secretary. The affair was very nice, and was pleasantly conducted under the following management: Floor manager, Wm. H. Fox; assistant do., Richard S. Denton; floor committee, E. J. Denin, Wm. Lambert, F. Keogh, H. Kuhlmann, Frank O'Neill, and John Durack. The reception committee consisted of John Crawford, Stephen Minahan, Hugh Moody, Frank H. Ackley, Thomas F. McCarthy, Fred. Raichle, Hugh Ward, W. A. Kerr, Wm. Roy and Jas. Keogh.

Marcus Ward & Co. have now ready their full line of calendars for 1883. They comprise twelve designs, the most noticeable of which are the daily Shakespearean block calendar, each page of which contains a quotation from the great play-writer, and an illustration of part of the piece it is taken from; the "Seven Ages," a monthly calendar containing the Shakespearean quotations from which it derives its name; "Day unto Day," which is of a sacred character and is illuminated by angelic designs; "Every Day," as its name denotes, is a daily calendar, containing quotations from different authors, and is intended for the use of business men; "The Seasons" is a two-leaved book, on the pages of which are illuminations representing respectively spring, summer, autumn and

winter. Besides the dates, this contains some useful information.

F. P. Kelly, printer and publisher, Red Bluff, Cal., has had his stock attached.

J. B. Lippincott & Co.'s Monthly Bulletin of New Publications has been received.

O'Connell & Benoit, stationers, &c., Baltimore, Md., have dissolved partnership.

The firm of H. Tammen, printer, Cleveland, Ohio., has been changed to Tammen & Rinhard.

William Bryson, Jr., has bought out W. T. Lambert, publisher of the *Republican*, Louisiana. Mo.

W. T. Andrus, bookseller and stationer, Orono, Ont., has sold out to his father, Freeman Andrus.

The Parsons Paper Company, Holyoke, Mass., is making an excellent article of bank-note paper.

The stock of Lobe, Salinger & Co., dealers in notions, San Francisco, Cal., has been attached.

Peter Herder, paper dealer, has recovered judgment against the *Press* Publishing Company or $480.18.

The satin souvenirs offered for the Chritmas and New Year trade by some houses, surpass any previous efforts in that line.

Hightower & Senter, publishers of the *Telegram*, Cleburne, Tex., have dissolved partnership. Oscar Hightower continues.

Francis C. Potts, of the firm of Sower, Potts & Co., publishers, in Philadelphia, committed suicide on Monday by shooting himself.

Sherwood & Canfield, publishers of the *Sunday Journal*, Toledo, Ohio., have dissolved partnership. J. R. Sherwood continues.

Application has been made to force Henry Crane & Co., wholesale and retail dealers in paper bags, Springfield, Mass., into insolvency.

Schofield & Dodgson, commission rag dealers, Philadelphia, Pa., have dissolved partnership. The members of the old firm, with John Schofield, have formed a new firm under the same style.

Buyers visiting New York should call on Hard & Parson, 126 and 128 Duane street. Their fall lines of goods are complete, and very extensive in plain, embossed, stamped and illuminated papeteries. The firm shows a new and complete line of wedding papeteries, some forty odd styles of New Year cards, which, for novelty and beauty of design, are said to be fully equal to any goods of the kind in the country. They also show many new styles of visiting and advertising cards, programmes and orders of dance, novelties in fancy boxes, new styles and shades of papers, and many other novelties, which the trade will do well to examine.

McCarty & Hasberg are in full working order for the fall trade, and are already quite busy. Judging from the general appearance of the stock which they exhibit, they will this season surpass any previous effort. The firm wishes the trade to bear in mind that it chiefly deals in imported goods, and that the principal manufacturers in Europe are assisting it in the way of furnishing certain lines of goods, which, it is said, can be sold for less than similar goods manufactured in this country. Many of the articles which the concern shows, European manufacturers will not, it is claimed, exhibit to American importers who manufacture goods in this country; this, in itself, ought to be the means of creating one of the leading lines in the city.

A fire occurred in the Tower Manufacturing Company's warerooms, 306 Broadway, on Monday evening last. There were four men in the store at the time preparing goods for shipment, when one of them, named Frank A. Corely, discovered smoke issuing from the basement, and notified the policeman on that post, who sounded the alarm. Three engines and two hook and ladder companies responded and succeeded in extinguishing the fire, which was in the sub-cellar, with but trifling loss. An investigation by the Fire Marshal, showed that an attempt had been made to burn the building, and Frank Elder, one of the clerks, has been arrested as the incendiary. It is alleged that Elder was intoxicated. The stock is valued at $100,000, of which there is only an insurance of $50,000. The damage amounted to about $200.

Marion & Co. have added a large variety of new designs to the line of samples which they had prepared for the trade. Myers Brothers, 62 John street, are ready to show the full line. Several souvenirs have been added in solid hall-marked silver in fan and other shapes, richly engraved with appropriate designs. There are likewise some designs on gilt and silvered metal in palette and other shapes. The ivory cards of the firm are very noticeable. They are all painted by accomplished artists, and are sent out in neat boxes lined with colored wool. The white flowers and ferns, for which Marion & Co. are so well known, have lately received large additions, and in every way they are perfect examples of what cards ought to be. The trade will also do well to notice the charming Christmas necessaries of the firm—combinations of satin cards with useful presents—which are likely to form important features in the trade during the coming season.

Pierce Butler, a number of years ago a member of the firm of Hart & Co., twine manufacturers, in West Fifty-seventh street, and lately employed as a salesman in the paper and twine warehouse of Henry Gade at 349 Broome street, this city, died on Monday night under peculiar circumstances. He was in the habit of frequenting the liquor saloon of John McCue, on the southeast corner of Eighth avenue and Forty-fourth street. He went in there on Sunday afternoon and drank freely of whiskey and lager. While under their influence he quoted Shakespeare freely, as was his custom, and entertained the *habitués* of the house. Afterward he fell asleep while sitting in a chair in a back room, and, waking suddenly, he staggered and fell over a liquor barrel. The third cervical vertebra was fractured, and death ensued on Monday night in Bellevue Hospital. Pierce Butler was a widower, thirty-five years old. The firm where he was employed speak highly of him.

SAFE COLORED FIRES.

As the dangerous character of the mixtures for producing colored fires resides in the use of chlorate of potassium and sulphur, any formula intended to lessen the tendency of such mixtures to accidental ignition must dispense with the use of those substances. Herr Sailer, of Altstaetten, Switzerland, has called attention to this very fact, and emphasizes a number of precautions to be taken. He points out that unless the materials commonly employed in preparing these mixtures are very pure, and the mixtures made with every precaution, they are liable to spontaneously ignite or explode. He recommends the following mixtures as absolutely safe. He adds that they do not produce quite as handsome a light as those containing sulphur, but asserts that they are still quite satisfactory, besides having the advantage of burning without much smoke and poisonous vapors :

For Red Fire.

Shellac	1 part.
Nitrate of strontium	5 parts.

For Yellow Fire.

Nitrate of sodium, pure and dry	1 part.
Shellac	4 parts.

For Green Fire.

Shellac	1 part.
Nitrate of barium	5 parts.

The shellac should be fused with the color-producing salt, which should be as pure as possible, and the resulting mass should be preserved in tight tin boxes. Following out the same general method, we should presume that the following receipt for blue fire would answer quite as well as the others :

For Blue Fire.

Nitrate of potassium	3 parts.
Ammonia-nitrate of copper	3 parts.
Shellac	1 part.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, JULY 27, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE envelope combination has hit it off. The necessary formalities have been completed and the trade are now working under the new arrangement. Let us hope that consistency will be the exception—for once.

JUST as THE STATIONER goes to press we are informed that the Executive Committee of the Envelope Manufacturers' Association, at a meeting held yesterday at Saratoga, has adopted a scale of prices and regulations, which will be sent to the trade as soon as printed.

SPECIAL exhibitions are good things—like all industrial competitions of a public nature. We observe that an international bookbinders' exhibition is to come off at Berlin during August, and that exhibits from Rome, London and Stockholm will be presented. It is a pity that there is nothing noted from this country. The show mentioned will include all kinds of bookbinders' machinery, tools, raw material, &c. Cannot some of our enterprising bookbinders and manufacturers of machinery start something of the kind, to be opened in the fall?

THERE has been a meeting of the German stationery trade at Nuremberg, and it was decided to urge upon the various school departments in Germany the propriety of forbidding school trustees, directors, teachers and minor officials to deal in school materials, particularly in localities where there are established houses properly supplied with everything that is required for use in the schools. It is asserted that much favoritism is shown, and that the trade generally are debarred from legitimate competition. The principle of making bids or tenders was insisted upon. The same thing is to be brought up at the bookbinders' meeting, to be held at Berlin next month. We fancy that the objectors to the methods complained of will be disappointed in their efforts. The system of influencing contracts is altogether abominable, and it can scarcely be repressed except by the application of severe remedies.

THE harvest returns are beginning to be amazing. The winter wheat crop has realized beyond all expectation, and the spring wheat is doing well. The results of the threshing indicate the largest winter wheat crop ever known in this country. The outturn of oats is amazing, and rye and barley have produced abundantly. The grass crops are also large, and the only item of doubt seems to be corn. Whether this will survive all of the possibilities of the season cannot, of course, be foretold. It has had a hard time of it this year, and if we may not expect a full crop, there will be considerable of it. The crop influences on trade are consequently favorable, and arguing from the premises, it is predicted that they will make a very lively fall business season. The country will have great reason to be thankful that this should be so, for there have been depressing influences which, with a partial failure of the crops, could only have led to disquiet and misfortune.

ANSWERS TO CORRESPONDENTS.

C. says: Please state the name of the maker or dealer in Philadelphia "ribbon note" paper.

Ans.—It is made to order for James D. Whitmore & Co., of this city, by Campbell & Smith.

M. says: Will you kindly refer me to some house that keeps a cheap article of medicated paper?

Ans.—Medicated paper is sold for $6.50 to $14 per case of 100 packages of 1,000 sheets each, according to size and weight of paper. It can be had of Vernon Brothers & Co., 67 Duane street; Ross White, No. 1 Reade street, and Hollingworth & Whitney, 144 Duane street, N. Y., all of New York.

OBITUARY.

F. G. BUFFORD, JR.

F. Gale Bufford, Jr., son of F. G. Bufford, of J. H. Bufford's Sons, died at his residence, 1,515 Broadway, this city, on July 21, after being sick four days with the measles. The deceased was in his nineteenth year, and was a tall, athletic young man. He had been for over a year assisting his father in the New York branch office, and was regarded as very competent in the performance of the duties assigned to him, and was highly esteemed by all who knew him. The deceased was well educated, having taken the gold medal of one of the universities. He also had two medals awarded to him by the United States Humane Society for saving two persons from drowning. The funeral was at Boston. A large circle of

friends extend their sympathy to the bereaved parents.

JOSEPH A. SLIPPER.

Colonel Joseph A. Slipper, of the firm of MacGowan & Slipper, printers, 30 Beekman street, this city, died on Monday, July 24. His funeral will take place at four o'clock this afternoon from his home at No. 457 Henry street, Brooklyn. Colonel Slipper was born in this city and was a graduate of Columbia College. He served through the late war on General Graham's staff. After the war he became an editor of the *Army and Navy Journal*, and was subsequently connected with the editorial staff of the *Hearth and Home*. The interment will take place at Greenwood Cemetery.

NEWSDEALERS AND STATIONERS' UNION OF NEW ENGLAND.

At a meeting of the Newsdealers and Stationers' Union of New England, held in Boston, on July 7, 1882, there was adopted the following

CONSTITUTION:

Whereas, By means of organization the members of any trade or profession have it in their power to attain any desirable advantage which cannot be accomplished by individual and separate effort; and

Whereas, By means of organization and association members of the same trade may enjoy many opportunities of pleasant and social intercourse, resulting in mutual information, encouragement and improvement, and many other valuable privileges; now, therefore, be it

Resolved, That the retail newsdealers and stationers hereby organize themselves, for the correction of trade evils and the attainment of all good objects, into a body to be called "The Newsdealers and Stationers' Union of New England."

ARTICLE I. Any individual who is engaged in the business of buying and selling periodicals and stationery at retail, or wholesale and retail, may become a member of this union, by application in writing, stating name and location of business, if elected by the union, upon paying to the treasurer the sum of one dollar and signing the Constitution; and also agreeing to pay an assessment of fifty cents at the commencement of each and every quarter, to meet the expenses of the union.

ART. 2. Every person, becoming a member of this union, shall be honorably bound to conform to the rules, regulations and by-laws.

ART. 3. The officers of the union shall consist of a president, vice president, secretary, assistant secretary, treasurer, and four other members, who shall constitute the Board of Directors. These officers shall be elected annually, by ballot, at the regular annual meeting, which shall be held on the second Tuesday of January in each year; and shall hold their offices until their successors are elected.

ART. 4. No compensation for services shall be paid to any officer, except the secretaries and treasurer; but the Board of Directors shall have power to employ clerks and to incur other expenses, when necessary to the proper performance of the duties of the said board.

ART. 5. The president shall preside at all meetings, if present; in his absence, the vice-president; he being absent, a chairman shall be elected from the members present.

ART. 6. The secretary shall keep a record of all meetings; conduct all correspondence; keep a list of the members in a book for that purpose; notify all committees of their appointment; and, if requested, furnish the chairman of committees with a copy of the vote under which they were elected or appointed, and act as secretary for the same. The assistant secretary shall assist the secretary, under the latter's immediate supervision; and shall officiate in his absence.

ART. 7. The treasurer shall receive and have charge of all moneys of the union; collect all dues; pay all bills, when approved by the board of directors; report the condition of the treasury, when required by said board; and shall give bonds for faithful care and keeping, when required by a vote of the union.

ART. 8. The board of directors shall provide rooms for the union; shall audit all bills, and direct payment of the same; shall carry out all votes and resolutions of the union, unless otherwise provided; and shall have power to fill all vacancies in the board. Each officer shall act under the direction of the board of directors.

ART. 9. Regular meetings of the union shall be held on the second Tuesday of each month; and special meetings, at the call of the president. At all meetings of the union, seventeen members shall constitute a quorum.

ART. 10. Alterations or amendments to this constitution shall be offered in writing, at a regular meeting; and, when read, shall lie upon the table until the next regular meeting, when the votes of two-thirds of the members present shall be necessary to make any alteration, amendment or addition.

The following directors were also elected at the same meeting:

Thomas Marsh, president; James F. Hunt, vice-president; Frank F. Allen, secretary; Luther W. Bixby, assistant secretary; Charles W. Drake, treasurer; Joseph Osgood, W. F. Woodman, R. C. Barker and J. J. Daly, directors.

These officers will hold their positions, by virtue of this election, only until January, 1883. Meanwhile, the membership should be increased so as to include all in our trade. FRANK F. ALLEN, Secretary.

THE PRINTING AND PUBLISHING TRADE.

The census returns for this branch of business are not yet complete for the entire country. The figures for twenty cities, however, are published, which present some interesting points of comparison. The capital employed in printing and publishing and the value of the products, in the twenty cities, are as follows:

	Capital.	Product.
New York	$14,775,000	$21,696,000
Philadelphia	5,728,000	6,835,000
Chicago	2,886,000	5,959,000
Cincinnati	2,525,000	4,001,000
Boston	2,496,000	5,469,000
St. Louis	2,480,000	3,658,000
Baltimore	1,954,000	1,374,000
San Francisco	1,745,000	2,987,000
Pittsburgh	1,567,000	1,422,000
Louisville	1,334,000	1,188,000
Washington	974,000	2,896,000
Brooklyn	889,000	1,595,000
Detroit	866,000	986,000
Buffalo	819,000	975,000
Cleveland	693,000	666,000
Milwaukee	435,000	675,000
New Orleans	303,000	64,000
Newark	274,000	423,000
Providence	222,000	537,000
Jersey City	66,000	100,174

As might be expected, New York stands at the head of the list, the value of its product being one-half that of all the other nineteen cities combined. Boston would perhaps be generally expected to occupy the next position in importance; but, contrary to what might be inferred from its literary status and its prominence as a publishing centre, it ranks fourth in respect to the value of its product and fifth as to the amount of capital employed—Philadelphia and Chicago outranking it on the former standard, and both those cities and Cincinnati on the latter. Those of the twenty cities selected by the Superintendent of Census whose product exceeds $1,000,000 in value, range in the following order of importance: New York, Philadelphia, Chicago, Boston, Cincinnati, St. Louis, San Francisco, Washington (including government work), Brooklyn, Pittsburgh, Baltimore, Louisville; estimated by the capital employed, the enumeration would vary somewhat from this order.

The smallness of the figures for Brooklyn and Jersey City, as compared with their population, is explained by their proximity to New York, which supplies sufficient literature of every kind for all three. The census furnishes no details as to the descriptions of printing and publishing done, but in the cities of New York, Philadelphia and Boston, it is safe to assume that a very considerable amount of capital is invested in making books and periodicals. Newspapers also must come in for a large share in all the cities.

Considering the pre-eminence of our people in the patronage of the press, it might have been expected that they would spend more upon its products than these figures indicate. The total value of this class of products for the twenty cities here enumerated is $64,000,000; while the value of manufactures of all kinds produced by the same populations is shown by the census to be $2,090,000,000. According to this showing, one dollar is spent on brain aliment where thirty-three is spent for miscellaneous local manufactures, to say nothing of the consumption of foreign products and of articles not classed as manufactures.—*Bulletin.*

Wood knots are in great demand, to meet the increased æsthetic taste of the day. They are subjected to a steaming process which softens them and develops their color, and are then used in exceptionally fine veneering. Persons who are experts in judging what knots are of value, make considerable money by going about looking for them. Two were recently shipped to New York from Caledonia, in that State, which weighed respectively 1,150 and 1,490 pounds.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, July 26, 1882.

THE MONEY MARKET.—The supply of loanable funds is undiminished at the previous low rates, and there is no appreciable change in the general financial situation. The stock market has rallied from the declining tendency which set in at the close of last week. The week commenced with a good demand for all classes of securities, and the buying continues to come largely from the public. The chief questions demanding attention are what to buy and how long to hold. The outlook is favorable, and the talk generally seems to be that the expected decline is as far off as ever. Governments closed a fraction lower. Foreign exchange remains steady and quiet.

THE PAPER MARKET.—The volume of city trade keeps up to very good proportions; in fact, some of our commission houses report sales during June and July, as ahead of the corresponding time last year. Although prices are somewhat lower than a year ago at this time, most of the leading grades have a fairly good support, and have settled down to a point from which very little change is likely to occur before the increased demand in the fall sets in. Paper makers and dealers, as a general thing, show much less disposition to cut prices than they did last month, from the fact that some large orders have been given at concessions in prices for goods to be made up, which will give many of the manufacturers enough to do for some time to come. There is some complaint of low water by paper makers having mills on some of the small streams, but there has been very little hindrance from this cause as yet.

THE STATIONERY MARKET.—Although a number of out-of-town buyers have arrived here during the present week, the high temperature has driven most of them out of the city to seek a cooler retreat, and those who remain show a disinclination to buy to any considerable extent. Some houses have received a fair number of mail orders, which have kept them moderately busy to execute, while in certain lines, notably fancy goods and blank books, many houses are positively active, with all of their employees on the jump to meet the demand of their customers. With the advance of the season the prospect for a heavy fall trade becomes more pronounced. No changes have been announced in prices so far as we can learn.

PRINTING FOR THE BLIND.

The Louisville, Ky., *Commercial*, of July 21, remarking upon the fact, that a new institution for the blind is to be located in that city, says:

Among no class of unfortunates have expenditures been made for educational purposes with better results than among the blind. This class have received some form of instruction in every age in all enlightened countries, but the improvement made in teaching them after the invention of printing in raised letters was such as to mark an entirely new era. Since books for the blind have been in existence, this class have furnished men of eminence in literature, science, music, art and mechanics. A member of the Belgian Congress, who possessed no little ability—Alexander Rodenbach—was blind, as have been several American divines of note in the present century. To-day the superintendents of four prominent institutions for the blind in this country are wholly blind. The State has long furnished, under the head of public charities, accommodations for the insane and for other unfortunates, and has been justly commended for it; but to furnish means of education to the blind, who, by having their minds trained may become useful citizens, is more than a charity—it is an investment that has always brought good returns.

Of the various systems of printing for the blind the simplest and most cheaply utilized is that invented by B. B. Huntoon, superintendent of the Kentucky Institution for the Blind, located in this city. The superiority of this system soon became so apparent that the institutions for the blind in half a dozen other States arranged to purchase the books needed by them from Mr. Huntoon's printery, and thus was established the American Printing House for the Blind. The facilities for this work were limited, and Mr. Huntoon was obliged to do his printing with a small force of assistants in the basement of the Kentucky Institution.

The Forty-fifth Congress appreciated the importance of this invention sufficiently to appropriate $250,000, of which the income was to be set aside forever for the benefit of the American Printing House for the Blind. Thus aided, Mr. Huntoon was enabled to add largely to his list of publications, until the limited accommodations in the building of the blind school were such as to impede the proper progress of his work.

The Legislature of Kentucky, at its last session, made an appropriation for a separate building for the work of printing for the blind, the first use of which was to purchase a lot on the north side of the blind-school buildings, in this city, extending from Frankfort avenue to the Browsboro turnpike. The size of the lot was originally 1,200 by 230 feet, but 30 feet will be cut off from end of the lot for a street, leaving it 1,200 by 200 feet in size. On this it is proposed to erect a building to cost $11,600, to be occupied by the American Printing House for the Blind, and to belong to the State of Kentucky. Ground was first broken Wednesday for the foundations of the new building.

The plans for the new building have been drafted by Charles J. Clarke, the architect, of this city. It is to be three stories in height, of brick, with cut-stone trimmings. The extreme length is to be seventy feet and the extreme width sixty feet. On the first floor will be the press-rooms, stereotyping-rooms, a fire-proof vault and the office of the superintendent. The second floor will be occupied by the bindery and rooms for storing printed matter. The third floor, which will be designed with a view to the

best facilities for light and ventilation, will be wholly occupied as a large composing room.

The presses in the new building will be run by a large steam engine, which makes a great degree of progress since the day when the entire printing of the establishment was done on a single hand-press, besides which the only other appliances were a few pounds of metal for casting plates and a small ladle in which the metal was heated over a stove.

Mr. Huntoon has never sought to derive any pecuniary benefit from his invention, and it may be regarded as belonging to the public. The new building will front on Frankfort avenue. The projectors expect to complete it fully during the present summer. The appropriation in the hands of the American Printing House will be sufficient almost to furnish the new building the new machinery and appliances needed.

GLASS WEIGHTS.

There are certainly some good reasons to be urged in favor of making fine weights of glass, or something resembling it. They can be readily made, and would be practically unalterable. Glass, however, is hardly the right material. Rock crystal—pure crystallized quartz—would be much better than glass for this purpose, for the reasons that quartz is much harder than glass, and hence not liable to be scratched and abraded by contact with hard substances when in use; and because it is also on this account less liable to be broken or chipped by rough usage or accident. The advantages of rock crystal for weights have been already perceived, and they have been made and used with very satisfactory results. They are made at Oberstein, famous for its agate cutting and polishing industry, and are referred to in the "Annual Record of Science and Industry" for the year 1875, in the following terms: "The considerable hardness of the rock crystal protects the weights from abrasion by usage, to which objection all weights of metal are open. The rock crystal is even more indifferent to the action of acids and alkalies than platinum, while it is utterly indifferent to oxidation, to which weights of metal are all more or less liable. Moisture has no effect upon it, since it is not hygroscopic. As compared with the metals, rock crystal has a very small coefficient of expansion, on which account the errors arising from variations of barometer and thermometer are reduced to a minimum (this point refers specially to standard measures of rock crystal). The weights are not objectionable on the score of expense, their cost being quite moderate. As made at Oberstein, by Herr Stern, the larger weights, from 50 grams to 1 gram, are made of rock crystal, the pieces having substantially the same form as the commonly used weights of gilded brass. The smaller weights are made of platinum as usual. Fresenius, who has used these weights, speaks well of them, declaring them to be admirably adapted for analytical work." It is only necessary to add, in conclusion, that weights of this or similar materials require to be handled and used with unusual care, to prevent breaking or chipping them. Aside from this disadvantage, the rock crystal weights are all that could be desired.—*Manufacturer and Builder.*

In Germany, the following wash is used for preserving the face of rollers not frequently in use: Corrosive sublimate, 1 drachm; fine table salt, 2 oz.; soft water, ½ gallon. Mix together, and let it stand twenty-four hours. Wash the rollers in the ordinary manner; and then apply the preservative with a sponge. The liquor should be shaken before using.

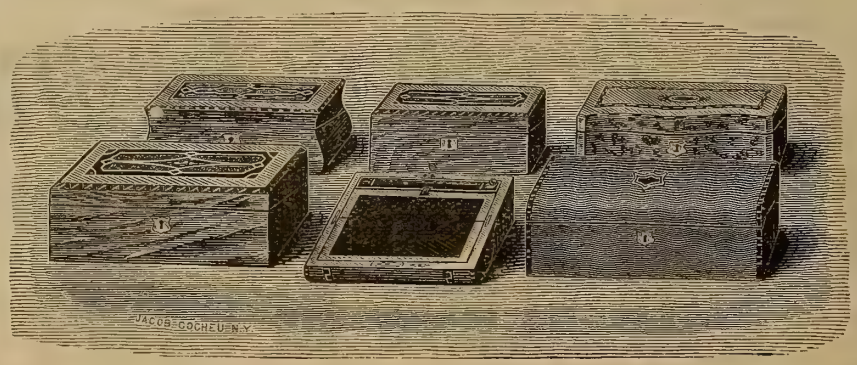
WRITING DESKS.

In order to meet an increasing demand for goods of new design and greater elegance in the line of writing desks, Koch, Sons & Co., of this city, have just introduced a new series embracing twenty-four different styles, some of the more prominent of which are shown by the accompanying cuts. Many of these desks are made of ebony and different colored woods, the tops inlaid with ivory, pearl and silver, and having ornamental centre-pieces. Some have round tops with inlaid edgings, and a shield in the centre, while others are square, with beveled corners, inlaid ivory border and silver shield. Some of the styles are covered in leatherette with imitation Marqueterie top, while there are others handsomely embossed and illuminated with humming-birds, peacock feathers and flowers in natural colors. All of the various styles are furnished. The fastenings are made of steel and brass, and many are finished in nickel-plate. The desks are in sizes to hold note or letter paper.



BABYLONIAN TABLETS.

The trustees of the British Museum have just acquired by purchase about three hundred tablets and inscriptions from Babylonia, and chiefly from Tel-Loh, the Zirgul of antiquity. The tablets are for the most part of unbaked clay, and are principally of that order the frequent occurrence of which has led them to be not unfairly described as "usual," being employed for the setting forth of contracts, for the acquisition and alienation of lands and other commodities, astronomical and mathematical calculations, omens, and, other matters referring to the life, the worship, or the science of the country. Consequently, not much new light on any question of doubt or importance is to be derived from the collection in general. But there are a few exceptions of a vivid and particular interest. A limestone cylinder, for instance, in a beautiful state of preservation and exactness of literal definition, about 6 inches long and the same in circumference, contains an Akkadian inscription of Ered-Ea, son of Kudur-Mabuk, King of Babylonia, about 1300 B. C., showing that it is a dedication to the goddess Ishtar, as a thank-offering for the preservation of his life, along with that of his father, from some common danger, whether of battle or other violence, of accident or disease. There are also four cones, about 7 inches in height and 7 inches in circumference at the base, which challenge a special attention. One of these, which may be taken to exemplify the rest, carries a dedication to the god Ningirsu or Ninip, a deity of somewhat convertible or incompletely ascertained attributes, figuring somewhat as the god of war, and relegating Nergal to the divine patronage of the chase, and at other times as the god of hunting, leaving Nergal to pose as the Mars of the Babylonian mythology. The name Ninip enters into the pious formation of several of the royal or illustrious names of the Tigro-Euphrates Valley; as, for instance, into that of Tugulti-Ninip, about 1300 B. C., the son of Shalmeneser I., of Ninip-pal-esar, about 1220 B. C., of Tiglath Ninip, borne by monarchs of the ninth century B. C., and of Ninip-ilai, whose representative year may be set down as 722 B. C. The dedication of this conical tablet is performed by Ur-Ba'u, King of Zirgul, now known as Tel-Loh, near Babylon; and from the absence of recognition of any especial or singular favor is to be regarded merely as an expression of a purely spontaneous and unsuggested devotion. One other of the cones belongs to the time and personal history of this sovereign, and the remaining two are referable to Gudea, king of the same place, who was presumably a predecessor, and, perhaps, the father of Ur-Ba'u. The prize of the collection, however, is an unbaked clay tablet, a copy of the original document from which the celebrated Synchronous History of Assyria and Babylonia was made, and dating from about the time of Cyrus, 538 B. C. This tablet contains the History of Babylon in a fragmentary condition, from about the fourteenth to the ninth century before Christ.

BOOKS AND GERMANS.

More books are written in Germany than in any other country, and fewer bought. In no other part of Western Europe is the number of family libraries proportionately so small—that of lending libraries, of which the rich and the well-to-do avail themselves without expense, so large. One of the chief authors in Germany was once asked to dinner by a lady, and splendidly entertained; but before he left, his hostess, clad in silk and jewels, asked him to lend her his latest novel. In consequence of this state of things, the profits of a German writer are far inferior to those of an English or French author of equal repute; yet books are dear, a circumstance that tells against their sale. Of late efforts have been made to rescue authors, publishers, and the public from this imbroglio. Only since the house of Cotta lost "protecting privileges," which died with the most serene German confederation of blessed memory, have the German classics really begun to be, in the proper sense of the word, the possession of the people, and to enter the home of the tradesman and the cottage of the peasant in cheap editions accessible to the poor. Along with the cheap editions, which, unfortunately, include only the works of past generations, there have appeared of late collections of single works of the best writers, which, in part at least, comprise the productions of living authors. One of these series, the "Haus und Familien Bibliothek," published by Spemann, consists of nicely-printed volumes at a mark each, after the fashion of the French one-franc libraries, and it of late has had a prodigious success in Germany. — *Athenæum.*

—:o:—

PRESERVATION OF BRONZE. — The ugly blackish mass with which most monuments of gun-metal are coated over in such a way as to make them look as if they were made of cast iron, does not consist of sulphuret of copper, as people generally imagine, but of a mixture of coal, sand, &c., with the bronze oxides. The coating referred to cannot be removed either by mechanical means or by washing the surface with reduced sulphuric acid, but an excellent result may be obtained by washing the surface with a concentrated solution of carbonate of ammonia. By this means a coating of platina is formed which prevents the ugly blackish mass heretofore alluded to from making its appearance again on the outside of the monument. It stands to reason that skilled and experienced hands are wanted to perform the operation. If, however, it does not prove successful, Herr Brühl says that Magnus' process might be resorted to, which consists in rubbing the surface of the monument repeatedly, at intervals of several weeks, with a solution of 20 parts of crystallizing acetic acid in 100 parts of neat's-foot oil. By the protoxides of copper and the oleic acid that arise from this, a thin green coating is produced, which prevents dirt and dust from sticking to the surface of the article, and, moreover, involves the formation of a coating of platina, without which bronzes exposed to oxidation in the open air are never likely to remain in a good state of preservation.—*Exchange.*

CEMENT STOPPING FOR WOOD.

Convert a quantity of sawdust, of the same kind of wood as that of the work, into pulp, by boiling and lengthened immersion in water. When quite soft and pulpy, strain off the water through a cloth, and squeeze the moisture from it; keep this for use, and when wanted mix a sufficient quantity of thin glue to make it into a paste; rub it well into the cracks, or fill the holes with it. When it is quite hard and dry, it may be cleaned off and finished. If the work has been carefully done, the patches will hardly be detected.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

THE GREAT ERIE RAILWAY,

LANDSCAPE ROUTE

OF AMERICA.

E. S. BOWEN, General Supt., New York.

JNO N. ABBOTT, Gen. Passenger Agt., New York.

WALNUT STAIN FOR WOOD.

The following formulas for staining wood in imitation of walnut is said to be a good one: 1. Take asphaltum, pulverize it, place it in a jar or bottle, pour over it about twice its bulk of turpentine, put it in a warm place and shake it from time to time. When dissolved, strain it and apply it to the wood with a cloth or stiff brush. If it should make too dark a stain thin it with turpentine. This will dry in a few hours. If it is desired to bring out the grain still more, apply a mixture of boiled oil and turpentine. This is better than oil alone. Put no oil with the asphaltum mixture or it will dry very slowly. When the oil is dry the wood can be polished with the following: Shellac varnish of the usual consistency, 2 parts; boiled oil, 1 part; shake it well before using. Apply it to the wood by putting a few drops on a cloth and rubbing briskly on the wood for a few minutes. This polish works well on old varnished furniture. 2. The appearance of walnut may be given to white woods by painting or sponging them with a warm concentrated solution of permanganate of potassa. The effect is different on different kinds of timber, some becoming stained very rapidly, others requiring some time for the result. The permanganate is decomposed by the woody fibre, brown peroxide of manganese is precipitated, and the potash is afterward removed by washing with water. The wood, when dry, may be varnished.

A GOOD INK.

Boil in one gallon of water one pound of bruised Aleppo galls for two hours, adding water to make up for the loss by evaporation. When cold, strain off the liquid portion. Dissolve five ounces of sulphate of iron (green vitriol) in as little water as possible, assisting solution by heating; also dissolve one-quarter pound of gum arabic in as little water as possible. When the solution is complete, pour the iron salt and gum into the decoction of galls with constant stirring. The ink should be allowed to stand in an open vessel for several days before it will be sufficiently dark for use, then transferred to a tall bottle and kept well stoppered. To prevent the tendency of this ink to clot, especially if placed where it is liable to freeze, the addition of a small quantity, say half a wine-glass of vinegar, may be found serviceable.

COLORADO BUSINESS.

Those who think of attending the National Mining and Industrial Exposition, to be held in Denver during August and September, should purchase the cheap excursion tickets of the "Great Rock Island Route," and take choice of four routes, with privilege of return until October 31.

Time as quick as the quickest, and no more changes of cars than by any other line—with the advantage in our favor of making the single change necessary in a Union depot. The rolling stock of this great railway is simply superb, consisting of magnificent Day Coaches, Pullman Palace Sleeping Cars, world famous Dining Cars, and exquisite Horton Chair Cars.

If going to the Northwest, don't forget the famous Albert Lea route to Minneapolis and St. Paul, where it connects with all trains of the Northern Pacific Railroad and St. Paul, Minneapolis & Manitoba Railway. Tickets for sale at all ticket offices.

Crimes lead into one another. They who are capable of being forgers are capable of being incendiaries.

Christmas and New Year, Wedding and Birthday

SOUVENIRS.

An ENTIRE LINE OF NOVELTIES in the above will shortly be ready. Prices ranging from 5s. to £5 5s. each, retail.

CHRISTMAS SOUVENIRS.—"Messrs. John Walker & Co. have struck out for themselves a new line in Christmas Cards, radically different from anything yet shown. We are forced to allude to the goods as "Christmas Cards," but they bear about the same relation to cards as a gold watch does to a German-silver toothpick. The souvenirs are beautiful miniatures on ivory, single, or in sets of two, three or four, enclosed in sumptuous cases of satin, velvet or morocco, a little in the nature of photograph albums, but very little like anything that has ever before been offered to the trade. Prices are from five shillings to five guineas. The oft-repeated question, "What shall I do with it?" will never be asked by the fortunate receivers of these souvenirs. They are of substantial size, great richness, and obvious worth as productions of art. Retail stationers who have or can make a market for these superb goods will have the satisfaction of knowing that the most severely critical of their customers can have no fault to find, and that they are offering something which will do credit to their own good taste."—*Stationery Trades Journal.*

GUM FROM ALGÆ.

A new method of utilizing marine plants has been devised in France. The plants used are various forms of Atlantic and Pacific algæ, and the product obtained is a gum said to be variously useful in the arts, particularly in the manufacture of leather substitute. The plants are first washed with warm or cold water, or both, the water either being pure or containing 10 per cent. alcohol, or any of the following substances: Lime-water, carbonate of soda, potash, carbonate of magnesia, or baryta, according to the smaller or larger quantity of cellulose or salts contained in the algæ, which has to be precipitated. Before the extraction of the gum the plants may be dried, ground, broken, &c., according to their nature and according to the requirements. For the extraction of the gum hot water is preferred to cold, and steam to hot water. The extraction takes place in a conical vessel, the plants being placed on a false bottom, through which steam or water is made to pass through the mass. The quantity of water or steam used varies with the quality of the plants—15 to 20 times the weight of the plants will be the best proportion. To facilitate the action of the water for the extraction the plants are subjected to maceration. In order to obtain pure and transparent algæ gum, this must be diluted with much water; then it is left to settle, the temperature being kept at 50° to 60° Centigrade. The gum gelatinizes by cooling.

GRASSES FOR DECORATION.

Great use has been made of imported dried grasses for purposes of decoration, but few are aware of the beauty of our native lowland grasses, since Fashion, which forsooth can even idealize the sunflower, has not seen fit to set her seal upon them.

Fine grasses are seldom found upon dry soil, but in meadows and unwooded swales the seeker will find them in infinite variety.

Other desirable water-loving plants, much prettier for drying than the fashionable cat-tail, also abound in such localities. Some of the daintiest ornaments of ladies' bonnets are culled from these neglected wastes. As taste will be the guide in selection, it is not necessary to particularize varieties.

For the time of gathering it is impossible to give dates, but grasses and their kindred should be cut while in the bud, a short time before the blossom opens—if later, they are apt to "fuzz" or rattle off.

For treatment cut the stalks of the desired length and clean of blades or leaves. Place the heads together, and tie in bunches of a size that will dry readily. Hang in the shade till dry.

Wheat, oats, barley and rye are also beautiful. I believe they should be cut while in the white stage of development, which comes between the green and yellow. Experience has shown me that they work well at this age, at least. Treatment the same as for grasses.

The one defect of all dried grasses is their loss of color. In a measure grains also have this fault. Some water plants, like cat-tail, dry to a rich golden brown, but dried grasses have a dingy, washed-out appearance, which can only be remedied by dyeing or bleaching. They are dyed by florists in all brilliant colors, but refined taste seems to dictate that the original bronze, gold or green be restored. The process is simple and performed with aniline dyes, which are for sale in various forms. Leaman's liquid dyes are highly recommended and easily used. Full directions come with each bottle, and where they are sold a pamphlet giving further particulars will be furnished at request. For those who do not possess the skill of florists in shaping by steaming and manipulation, it is well to place the grasses or oats in an upright or leaning position while drying after dyeing to avoid the stiff look of a perfectly erect stalk. Indeed, if the grasses are not to be dyed, it is well to dry them in some such position at first.

For arrangement there are few prettier things than the little grass or grain trimmed baskets; *called* baskets, though they are in the form of anything else as well. Designs for everything of this kind, both trimmed and untrimmed, may be readily found. If the baskets cannot be obtained, delicate willow baskets, willow ware, toys, such as chairs, cradles, &c., may be utilized for the purpose. I have a doll's willow chair trimmed, which makes a pretty ornament for a low bracket. The seat is covered with blue silk tacked with straw buttons, the frame concealed by yellow grasses, with a thistle ball flattened at the back, forming a cushion where the head rests, with a fan of bearded grain above it. The trimming is held by winding with fine wire, beginning at the top; another arrangement is to form a bouquet of grasses, ferns, cat-tail, autumn leaves, small thistle balls, &c., upon a square or oval of velvet, satin or cloth, framed in a border of ferns or autumn leaves. They can be held in place by a few stitches, and the finished picture may be tacked upon the wall. Lack of space prevents further details of methods of arrangement, but all are familiar with many pretty designs.—*Outing.*

WOOD DECORATION.

W. Sutherland & Son, of Manchester, have brought into use a method for staining white woods in various patterns, in imitation of inlaid woods, which is simple and effective.

The surface to be decorated is made as smooth as possible. It is then coated with one or two coats of size, prepared by adding to glue size of just sufficient strength to form a jelly, a little egg albumen and a small quantity of alum. When this is dry and thoroughly hard, the design must be traced or pounced upon it. The outline and those lines separating the different parts of the design, and all other parts that are to remain the natural color of the wood, are then carefully painted in with Brunswick black or Canada balsam, laying on the black with a good body. This should remain until it gets thoroughly hard, which will be in about six or seven hours. The surface is then washed with a sponge and lukewarm water until all the size is removed from the exposed parts, the pattern drawn in the Brunswick black, which is impervious to water, remaining intact, and serving to prevent the stains running together when being applied. This washing must thoroughly remove all the size preparation, and after the wood has been allowed to dry it will be ready for the application of the colored stains. If the painting has been properly done, the design will appear as a clear black outline, the white spaces in which are to be filled in with various colors, after which the black outline is to be removed, as will be explained. The black lines should be fully one-sixteenth of an inch wide, and wider if required. Having decided upon the woods to be imitated and the colors to be used, the stains, which may be either spirit stains or water stains, or both, may be laid in. The lightest stains must be put in first, and need not be confined to the exact outline of that particular part, but it is as well that they should be. The stain may be freely used and laid as level as it will allow, but a little shadiness is not at all objectionable. The next darkest stain may now be proceeded with, and so on for as many stains as are desired. When all are dry and hard, the black outline may be washed clean off the wood with a brush and turpentine, which may be used freely until the whole of the Brunswick black is removed. The various colored stains will then appear inclosed in a white outline, which, if properly done, will be sharp and clean and clear as an inlay of the real woods. What grain the white wood has will be more or less seen through the stains, as they may be light or dark. The work may then be French-polished or varnished.

ARTIFICIAL IVORY.

In making articles of artificial ivory the greatest difficulty hitherto has been that, in order to gain the necessary firmness, a large percentage of the binding substance had to be used, and hence only dull-colored articles could be produced. Recently J. S. Hyatt, the inventor of celluloid, has produced a substance in which only very little gum or other cementing material is used; so that, without detriment to its durability, the finished article may still have a pure white color. This result is arrived at by grinding up any suitable matter with a solution of a proper cement. The cement solution is then expressed, the residue is dried and ground, and the powder thus obtained is heated and pressed into molds. The most suitable inert matter found is oxide of zinc, and the best cement is shellac or some similar vegetable substance. A solution of ammonia forms the solvent. Hyatt first dissolves 8 parts shellac in 32 parts ammonia, specific gravity 0.995, by thoroughly mixing the two at a temperature of 37½° Centigrade for five hours in a rotating cylinder. Forty parts of oxide of zinc are now mixed by hand into the thin syrupy solution, and the mixture is well ground in a color mill. The ammonia, having served its purpose, is now driven off by heat, or by exposing the mixture on glass plates for a long time to the air. The residue, consisting merely of dry shellac and zinc oxide, is again finely powdered, and the powder thus obtained is pressed into the molds with a pressure of about 2,000 pounds per square inch, and at a temperature of 125° to 137½° Centigrade. If the article is to be colored, the coloring matter is either added to the solution before the first grinding or to the dry mass before the second grinding.

The old Japan lacquer boxes in the Hamilton collection, many of which were quaintly formed in curious shapes of gourds and birds, containing within them smaller boxes, all beautifully ornamented with painted and raised flowers, and various designs upon the fine old gold ground lac, brought prices quite unheard of for these choice little *objets d'art.* Scarcely one sold for less than five guineas, and many for from twenty to thirty, others going as high as fifty guineas. Two little boxes in the form of geese, with their feathers all modeled in gold lac, about 2½ inches long, sold for forty-two guineas. A small cabinet of gold lacquer, with flowers and foliage in relief, in mother-of-pearl and silver, with nest of drawers, measuring only 6½ inches by 3½ inches, brought no less than 255 guineas. A double-shaped box of gold lacquer, painted with horses in a landscape, sold for eighty-five guineas. A large black and gold cabinet, ornamented with landscapes, figures and buildings in gold, on carved ebony stand, realized 125 guineas.—*London Times.*

BYRON WESTON

DALTON, MASS., U.S.A.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**
Each sheet is water-marked with name and date.

SPRINGFIELD SPINNINGS.

[CORRESPONDENCE OF THE STATIONER.]

SPRINGFIELD, Mass., July 29, 1882.

Springfield has long been conceded by some of the best business men of the country to be one of the best of locations for manufacturing, and is to-day, notwithstanding that the thermometer (one hundred dozen of which, by the way, James E. Gill has had imprinted for his large retail trade) stands 96 in the shade, busy indeed with its various manufacturing industries, preparing for the largest fall trade ever done, particularly in the envelope and papeterie business, of which this city is the centre, and for which I am informed large orders have been placed with the Powers Paper Company, Morgan Envelope Company, and others.

The Standard Envelope Company, composed of all of the leading envelope manufacturers of the country, had a meeting last Saturday at the office of the Powers Paper Company, and perfected arrangements to protect its members from the cutting process, alike injurious to themselves and the dealers. This will in all probability hold for the next three years, as, should any of the manufacturers violate the articles of agreement, they can be fined $5,000 for each and every offense.

The trade of the Powers Paper Company is steadily increasing in every State in the Union, calling at present for about four tons of paper daily to supply the trade in this one branch of its business.

Drummers with the leading lines of Christmas cards have, during the past month, been plenty, and the lines shown are generally good, and the prospect is now that more of these than ever will be sold during the coming season.

About one o'clock on Tuesday morning Springfield experienced about the only large fire for months in the burning of the Springfield Glazed Paper Works on Lyman street, where they were doing a steadily-growing and profitable business.

It was first noticed in the second story of the building and the flames spread fast and noisily through the entire building, and though the firemen responded quickly, the nature of the stock was such as to make the flames appear happy in their work of destruction. The loss cannot reach much less than $50,000 upon the stock and machinery, and $6,000 to $8,000 upon the building, though something may be saved from what now looks like a total loss. The company is insured nearly the full amount, as are also the owners of the building.

Our horse railroad company is completing its double track, so that it can run cars as often as one every ten minutes, and we shall soon have a new hotel, namely, the "Warwick," that from present appearances, will be one of the best in the field. Parties who have of old patronized the old Delavan in Albany, will be glad to meet here that genial little man well known among hotel men, Major Field. D. J.

CINCINNATI CIPHERINGS.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., July 31, 1882.

It is about time the outside world was once again reminded of the importance of Cincinnati as a paper-making centre. By Cincinnati in the manufacture of this commodity is meant all of the paper mills within a hundred miles of the city. They are in the main owned here; the capitalists who run them chiefly reside here, and the very few who do not reside here sell their products through Cincinnati factors. The range of the product of the Cincinnati mills is expanding. It now embraces book, news, manilla, wrapping, roofing, building, blotting, tissue, colored, writing and ledger papers. The fresh enterprises are holding their ground valiantly against all competition. Other grades will surely be introduced from time to time till the whole category of paper goods in all of its grades will be produced here. That is a case of manifest destiny. There is capital here for holding the ground already occupied against every species of competitive invasion, and there is aggressive capital here and a combative spirit prepared for conquest, which will never be satisfied with anything short of covering the whole ground. You may smile and smile at that, but it has not been ten years since people smiled with incredulity at the suggestion of manufacturing enterprises which have become vital realities in Cincinnati—manufacturing industries to the discomfiture of all rivals. There were geographical reasons and other physical conditions which, with an iron law, destine and foreordain Cincinnati to be a great manufacturing centre. It is as wise to resist the laws of gravitation as to resist this destiny.

Paper here is firm in prices—very firm, one might say stiff—and every day stiffens this stiffness. It looks just now as if the tendency would be upward within a fortnight. Orders are rushing in, and they are numerous and large and the volume of the rush is increasing. It gratifies the vanity of "Prince William" that he predicted this very state of affairs, contingently, above six months ago, and more than once since that time. This good state of trade was predicted in the event of good crops. In Ohio, Indiana, Kentucky and Southern Illinois the wheat has been harvested, stacked and in part threshed. Some of it has gone by rail to the East, and now day and night the trains laden with grain are running on all the roads. The yield in Ohio is the greatest ever known. It is a double crop all over the State. The oat crop is simply immense. Nothing like the hay harvest was ever known. The plant of potatoes and the prospect are the best in every respect the State ever had. In respect to oats, hay and potatoes the same may be said of Kentucky, Indiana and Illinois as of Ohio.

Cincinnati is trading with the South more this year than ever before. Within ten years there will be an overwhelming rush of emigration to the agricultural regions of the South rejunevating and regenerating that region. Then look out for a sudden and overwhelming growth of this city. Our rapidly growing trade with the South is now in grain and provisions, in agricultural implements and manufacturing machinery. Railroads are traversing that genial region, and emigration will follow them like a swift fate. At present Cincinnati does but little trade south of the Ohio in bookbinding and printing machinery and material, simply because there is little or no demand for such material there. Emigration will change all that very soon. Railroad men foresee that, young business men foresee it and are wisely preparing to reap benefit from it.

The business men of Cincinnati know that in the Gulf States this year the plant of cereals was greater than ever before. That will liberate some of the northern cereals for home consumption and export.

As to the corn prospect in the Ohio valley it must be said that in the river valleys a great deal of the spring plant has been entirely destroyed by floods and the land is unplanted. In the very wet uplands the heavy rains have been fatal to the crop. In all other lands which comprise three-fourths of the crop the prospect is fair. On last Friday a rain came which was worth millions of dollars to the corn crop in the Ohio valley. Yesterday and to-day a gentle rain has been falling which will assure a fine yield of corn. In fact there is everything now to bolster up the feeling for trade. The fact is that never in the history of this city was the August trade so good in every line of business. Speculation is quiet. There are many burnt fingers from it last year, which are sore yet and which serves as warnings to the too enthusiastic money makers. No body is getting wild. Sober sense and level heads are the

order of the day and are likely to govern in trade. The whole country seems to have been purified by the dangers which the great crops are averting.

By the way, there is some anxiety about the filling of those great blanket orders in the envelope business at low rates. Some dealers here have orders for millions, to be filled on optional calls at July prices, between last April and next April. It is the current talk that, about 300,000,000 envelopes were sold this year on about the same terms.

Charles Stewart, of the Stewart Paper Company, to-day purchased on a lease with option to buy a lot 26½ feet by 100 feet, with five-story building and basement on the northwest corner of Baker and Walnut streets. This gives him, with the adjacent buildings, which he owns, 66 feet on Walnut street. He leased with an option when prices were at the bottom, and his transaction puts at least $8,000 gain in his pocket.

Among the trade visitors to Cincinnati during the past week were: O. C. Mackenzie and A. D. Freeman, of Culver, Page, Hoyne & Co., Chicago, Ill.; W. A. Sanders, of C. B. Dickinson, Brooklyn, N. Y.; N. Frank, of Charles Zinn & Co., New York; M. Vernon, of S. E. & M. Vernon, New York; Frank Coffin, of J. G. Shaw Company, New York; Mr. Anderson, New York; B. A. Stone, of Langfeld, Turner & Andrews, Philadelphia, Pa., and a representative of J. Q. Preble & Co., New York.

PRINCE WILLIAM.

TORONTO TAKES.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., July 29, 1882.

Last week I took a short run east and north, calling first at Port Hope, a smart town and pretty, on Lake Ontario. It is the terminus of the Midland Railway, and an important shipping port for lumber and produce. Steamers passing up and down the lake call daily, and there is also a daily boat across the lake to Charlotte. The leading booksellers and stationers are R. J. Williamson and W. H. Parsons. Both have fine stores and report trade good.

My next point was Peterboro, thirty-one miles north, and reached by the Midland Railroad. It is situated on the Otonabee River, one of the finest water-powers in the province and a large lumber centre. Besides its large saw mills, there are a number of extensive flour and other mills. It is the headquarters for the western section of the Ottawa and Quebec Railroad, now building. The town lies in the centre of a fine agricultural district, and is one of the most progressive places we have. The leading representatives of the trade are J. Menzis, a veteran book man, well known "where'er the sun," &c., and Davis & Co.

North and west is Lindsay, the capital town of the County of Victoria, on the direct line of the Midland Railroad, and connected with Toronto by that and the Nipissing Railroad, and also the Whitby and Lindsay road. The Scugog River affords it a magnificent water-power, which is thoroughly utilized. Among the number of mills which line its banks has recently been added a paper mill, of which you have been advised. Of the leading members of the guild, it affords me great pleasure to write the name of my genial friend, R. S. Porter, whose sign has been suspended over the same door for twenty years. I regret, however, on my own account that he was absent, but hope that he is enjoying his holiday to the full, down around Portland somewhere. J. Beall has a very neat and attractive store.

It is my usual practice to arm myself with two or three books to while away (to me) the monotony of riding on the rail. But this time, and on the former occasion which I noted, the green fields, with their rich promise, stretching away to right and left as far as the eye could reach, were so delightful that I put my book aside and gave myself up to the beauties that were being constantly unfolded in waving fields and shady nooks. I think there are few who can so thoroughly appreciate this sort of thing as the city man who makes his escape from the heat and noise of crowded streets.

Nisbet Byron & Co., wholesale booksellers, stationers, &c., of this city, suspended last week. They are now in treaty with a strong house here to sell the stock *en bloc*. If they succeed it will be a good thing for all concerned, and will enable them to pay their creditors nearly if not quite one hundred cents to the dollar. The reason assigned for their embarrassment is insufficient capital and selling too close. They are to be commended for acting so promptly when the discovery was made that they were going behind. The house has been in business now about one year and a half.

Walter King, of Collins Sons & Co., Glasgow and London, and Jos. Macdonald, of Jno. Walker & Co., London, are both in town. One of the firm of Collins & Sons paid us a visit this week.

I have but little to add—in fact, nothing about trade. It is too hot to work; a great many are away, and those who remain are so wilted with the heat that they can't if they would like to do it, kick up much of a dust. There is no grumbling, however, and the prospects for the fall are first rate.

The enterprising firm of W. J. Gage & Co. has opened a branch house in Winnipeg.

C. H.

OXIDIZING SILVER ARTICLES.

A very beautiful effect is produced upon the surface of silver articles, technically termed oxidizing, which gives the surface an appearance of polished steel. This can be easily effected by taking a little chloride of platinum, heating the solution and applying it to the silver where an oxidized surface is required, and allowing the solution to dry upon the silver. The darkness of the color produced varies according to the strength of the platinum solution from a light steel gray to nearly black. The effect of this process, when combined with what is termed dead work, is very pretty, and may be easily applied to medals and similar objects. The high appreciation in which ornaments in oxidizing silver are now held, renders a notice of the following processes interesting. There are two distinct shades in use—one produced by a chloride and which has a brownish tint, and the other produced by sulphur, which has a bluish-black tint. To produce the former it is necessary to wash the article with a solution of sal ammoniac; a much more beautiful tint may, however, be obtained by employing a solution composed of equal parts of sulphate of copper and sal ammoniac in vinegar. The fine black tint may be produced by a slightly warm solution of sulphuret of potassium or sodium. The chloride of platinum mentioned above is easily prepared as follows: Take 1 part nitric acid and 2 parts hydrochloric (muriatic) acid; mix together and add a little platinum; keep the whole at or near a boiling heat; the metal is soon dissolved, forming the solution required.

POLISHING WOODWORK.

The following is taken from Comstock's new work, "Interior and Interior Details:" "Soft woods may be turned so smooth as to require no other polish than that which can be given by holding fine shavings of the same wood against them in the lathe.

For polishing mahogany, walnut, and some other woods, the following formula is given: Dissolve beeswax by heat in spirits of turpentine until the matter becomes viscid. Apply a clean cloth, and rub thoroughly with another flannel or cloth.

Beeswax is sometimes alone used. For work in position, it must be melted and applied, and rubbed as above. For work in the lathe, it can be applied by friction, the slight amount of wax melted being sufficient for the polish. The work should be thoroughly rubbed.

Mahogany may be polished by rubbing first with linseed oil, and then by a cloth dipped in very fine brick dust.

Some hard woods have a natural polish, and do not require a polishing medium.

A fine gloss can be produced by rubbing with linseed oil, and then holding shavings or turnings of the same material against the work in the lathe.

A very perfect surface can be obtained with glass paper, which if followed by hard rubbing, will give a beautiful lustre. Lustre can also be given to carefully finished surfaces by applying a small quantity of thinned varnish, shellac or 'fillers' by a cloth, and carefully and thoroughly rubbing."

METALLIC WRITING PENCILS.

These pencils consist of an alloy of lead, bismuth and quicksilver. The ingredients vary according to the desired hardness of the pencils. The ordinary proportions are: Lead, 70; bismuth, 90, and quicksilver 8 parts by weight. A larger proportion of lead and quicksilver makes the pencil softer, and produces darker marks in writing. The lead and bismuth are melted together and allowed to cool somewhat, when the quicksilver is added and the composition cast in proper molds.

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

☞ ANNOUNCEMENT. ☜

WE beg leave to announce the completion of our line of CHRISTMAS and NEW YEAR CARDS for the Season 1882-1883, for which our Agents will commence to solicit orders in May. We feel confident that the popularity which our Cards have enjoyed in former seasons will again be secured by the efforts we have made to bring out a line in advance of all our previous productions. The names of the Artists who have contributed designs is proof of our continued efforts to reach the highest excellence. We will name only the following:

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,

MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

Due regard has again been paid to the literary matter in connection with the designs, and many of the latter are accompanied by original poems, from writers of note, such as MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

Fringed Cards—All furnished with envelopes and protectors.
Envelopes—Furnished without extra charge for all cards for which the list price is $1.80 and over.
Backs have been specially designed for our cards, adding an attractive feature to them.

Bird Cards, by Miss F. Bridges, Mrs. O. E. Whitney and others
Figure Cards, by Miss L. B. Humphrey, Miss Rosina Emmet, Miss L. B. Comins, Alexander Sandier and others.
Flower Cards, by Mrs. O. E. Whitney and others.
Fan Cards, by Mrs. O. E. Whitney, in new styles.

PRANG'S PRIZE CHRISTMAS CARDS.

THIRD COMPETITION

FIRST.—Artists' and Popular Prize Card ($2,000), by Miss Dora Wheeler,

THE BEST DIARY.

ECONOMICAL DAILY MEMORANDUM

·1883·

ANNOUNCEMENT.

WE present for approval the "Economical Daily Memorandum" in various sizes and styles, printed on good paper, strongly sewed and neatly bound, with leather backs and printed sides, also in full leather.

Besides a space for each day of the year it contains tables of the rates for foreign and domestic postage and money orders, valuable postal information, calendar and cash account for each month.

In addition to days of the week and month, the diary is numbered for the days of the year, a valuable improvement, useful for time calculations.

Dealers, whose trade does not warrant an investment of the considerable sum required to purchase an assortment of Diaries in the usual extended variety, will find a few dollars profitably spent in buying these goods, which come within the reach of all.

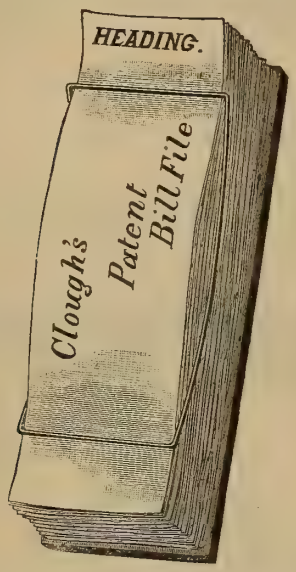
Dealers, already carrying a line of other Diaries, will find the "Economical" a valuable addition. Being made without flap or tuck they can be retailed at the price commonly charged for similar plain memorandum books, and therefore extend the sale to a different class of buyers.

We will be glad to furnish the trade samples at a reduced price. We solicit early correspondence in order that books may be received in time to make a selection and place an order for early fall trade.

Owing to the limited season during which Diaries are retailed, the demand must be anticipated by both jobbers and manufacturers.

VAN ANTWERP, BRAGG & CO.,

Blank Book Manufacturers,



CINCINNATI, O.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

CLOUGH'S BILL FILE.

Another new thing in bill files is illustrated. In this file the papers are introduced at the side and may be filed and referred to with great rapidity and convenience. It is made in four

sizes, and, with any of the sizes, papers of any width, folded or open, may be filed. The usefulness and neatness of the file is obvious. It is made by the Clough Manufacturing Company, Newark, N. J.

NEW PATENTS.

No. 261,130. Photographic Camera. — Thomas H. Blair, Cambridge, Mass.

No. 261,132. Picture Frame.—Eduard Brodhag, Jersey City, N. J., assignor to Lewis Pattberg & Brothers, New York, N. Y.

No. 261,173. Blank-Clip. — William W. Prichard, Russell, Ky.

No. 261,225. Calendar.—Henry S. Hack, Taunton, Mass.

No. 261,229. Hand-Stamp.—Benjamin B. Hill, Springfield, Mass.

In a hand-stamp, the combination of a fixed frame provided with an inking-pad exposed on its lower side, an actuating frame, a revolving die-block having a number of sides, as described, and pivoted upon journals having a bearing in the actuating frame, an oscillating yoke loosely embracing the ends of the die-block, and a spring detent or catch mechanism between said yoke and die-block, so that the latter may be revolved in the yoke to bring and retain either of its printing-dies into position to be used for printing and for having the ink automatically applied for printing by the movement of the actuating frame in the operation of printing.

No. 261,244. Mechanical Toy.—Henry O. Lund, Bridgeport, Conn.

No. 261,245. Manifold Order Book.—James S. McDonald, Chicago, Ill.

An order-book in which the sheets of a set or series of orders differ in tint or color, and all of the set except one are perforated.

REISSUES.

McCARTY & HASBERG

IMPORTERS,

487 Broadway, Corner of Broome Street, New York.

CARD.

WE are now prepared to show our new stock of "Stationers' Fancy Goods." We beg to say that we have surpassed all previous efforts, and our assortment will contain goods not to be seen elsewhere.

Your special attention is called to the following: We deal chiefly in imported goods, and the principal manufacturers in Europe are supporting us in the way of furnishing certain lines of goods which can be sold for less than similar goods can be manufactured in this country.

Most of the articles we show, European Manufacturers will not exhibit to American Importers who manufacture in this country. This in itself ought to be the means of creating one of the leading lines in the City.

Our customers and the trade generally are invited to call.

Very respectfully,

McCARTY & HASBERG.

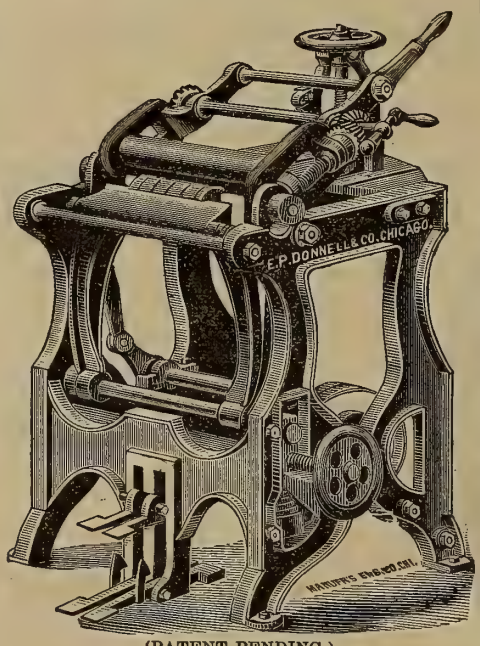
E. P. DONNELL & CO.,



— MANUFACTURERS OF —

Improved Bookbinders' Machinery & Tools,

CHICAGO, ILL.

STILL ANOTHER IMPROVEMENT IN

ROLLER BACKING MACHINES.

(PATENT PENDING.)

By the use of our new Improved Roller Backer you can back a LARGE or SMALL quantity of books, of different sizes, as the Roller is adjusted by turning the handle on right, which runs the steel-cut beveled gears, and carries the Roller up or down very rapid and true every time, for any thickness of books, the first time, thereby saving great time and labor. There is no strain on the thread that carries the Roller. This is the only Roller Backer made which can be adjusted for a few books without a great deal of time and trouble.

This machine is built in a very superior manner, with steel connections, and the holes are reamed out; steel jaws, and made extra heavy for hard work. It has a triple spring for rest on back, to prevent the jar of the whole body in running the Roller clear back. This machine is pronounced, where in use, to be the strongest and quickest adjusted machine ever made. Can be adjusted from a 4-inch book to a ¼-inch book instantly, ready to make a TRUE BACK without loss of time, and the workman cannot but make a true back on every book.

Length of Jaw, 18 inches. Price, $325.

WILLIAMSON'S MAGIC POLE

For taking down from high piles, or shelves, or putting up in high places, any kind of box having a projecting lid. Delivered to any point in the United States except the Pacific Slope, for $1.25. Liberal Discount to the Trade to sell again. Patented July 12, 1881.

WILLIAMSON'S GRIP TABLET.

The GRIP TABLET is a case to hold from 1 to 150 loose sheets of Note Heads, Letter Heads, &c., binding them at once into tablet form, or blocks, without the use of glue, paste or any other contrivance, which mars the beauty of a well printed sheet, and is no larger than an ordinary tablet, and is renewable; the sheets are simply drawn out. Inclose 25 cents for a sample of any desired size.

JOHN WALKER & CO.,

96 FARRINGDON STREET, LONDON, E. C.

Christmas and New Year, Wedding and Birthday

SOUVENIRS.

An ENTIRE LINE OF NOVELTIES in the above will shortly be ready. Prices ranging from 5s. to £5 5s. each, retail.

CHRISTMAS SOUVENIRS.—"Messrs. John Walker & Co. have struck out for themselves a new line in Christmas Cards, radically different from anything yet shown. We are forced to allude to the goods as "Christmas Cards," but they bear about the same relation to cards as a gold watch does to a German-silver toothpick. The souvenirs are beautiful miniatures on ivory, single, or in sets of two, three or four, enclosed in sumptuous cases of satin, velvet or morocco, a little in the nature of photograph albums, but very little like anything that has ever before been offered to the trade. Prices are from five shillings to five guineas. The oft-repeated question, "What shall I do with it?" will never be asked by the fortunate receivers of these souvenirs. They are of substantial size, great richness, and obvious worth as productions of art. Retail stationers who have or can make a market for these superb goods will have the satisfaction of knowing that the most severely critical of their customers can have no fault to find, and that they are offering something which will do credit to their own good taste."—*Stationery Trades Journal.*

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

W. L. Tripp, bookseller and stationer, Jackson, Ohio, has sold out.

George H. Winters, printer, Mansfield, Ohio, has made an assignment.

Emil Hartmann succeeds Hartmann & Kraatz, job printers, Milwaukee, Wis.

West & Ogden, dealers in fancy goods, Rochester, N. Y., are closing out.

Wm. H. Body, publisher of the *Demokrat*, Kansas City, Mo., has sold out to Wm. A. Buhlart.

T. H. Hobby, dealer in notions, Millin's Bay, N. Y., has closed his store, and is reported to have left town.

Gregory & White, booksellers and stationers, Providence, R. I., have dissolved partnership. Harry Gregory continues.

The stock of A. McCreary, bookseller and stationer, Washington, D. C., has been advertised to be sold out at mortgagee's sale.

Martha A. Pennock (wife of Francis E.), manufacturer of paper boxes, Pittsfield, Mass., has filed a married woman's certificate.

It is an open secret with the trade that the sales of Liebenroth, von Auw & Co. during the past month of July were considerably in excess of $100,000. This provokes the inquiry : Where do all the blank-books and albums go ?

Hopcraft & Co., 21 Barclay street, New York, have published two novelties which will have a run. They are called the "Saratoga Belle" and "Solid Comfort." The American News Company has the agency.

Frank Bowman, of Daniel Slote & Co., returned home a few days ago from a short business trip to Pittsburg. He reports trade at this place at the time he was there as quiet, owing to the labor strikes, but says that the prospect for fall trade is good.

Chas. W. Holbrook, Windsor Locks, Conn., manufactures school apparatus and terrestrial globes for school use. These combine the latest improvements. The maps are all new, and the groundwork upon which they are pasted is said to resist the ravages of time and climate. Mr. Holbrook also supplies object-teaching forms, geometrical solids, &c.

Late on Tuesday night a fire started in the waste-room of the large Keith Paper Mill, at Turner's Falls, Mass., which was probably caused by spontaneous combustion. The principal damage was caused by water ; $70,000 worth of stock ready for market was stored in the upper story, nearly all of which is damaged. The main portion of the mill is uninjured by the fire. The loss is estimated at $40,000 to $60,000, principally in the stock.

Charles J. Cohen, Philadelphia, is beginning to receive advance shipments of the new goods selected by him in person in Europe. A new umbrella just patented, called the "Compactum," is one of the serviceable novelties just opened : it is said to be the most compact and neatest article of its kind and the quality of the silk covering is the highest standard ; it will make a serviceable as well as ornamental present.

No more cheerful party of excursionists sailed up the Hudson River on Saturday afternoon than that which went under the auspices of E. Wells Sackett & Rankin, stationers, printers and lithographers, William and Pine streets. this city. This firm, recognizing the faithful services of its employees during the past year, gave them and their friends an afternoon and evening excursion. The steamer N. K. Hopkins left pier 3, North River, shortly before four o'clock, with the party numbering about 125, and started up the river, landing at Peekskill about 8 o'clock, and after about an hour's stay at that place returned to the city about midnight. Every possible condition existed conducive to the happiness and comfort of all on board. It was a beautiful moonlight night, a goodly representation of the fair sex being present ; good music enlivened the occasion, and what with dancing and the bountiful supply of refreshments furnished by the firm nothing was wanting to make it highly enjoyable to all. A feature of the occasion was the floor manager, whose duties were admirably performed by Wm. Hodes, better known as "Boom-a-la." Before entering upon his duties he was presented with an immense sunflower and a tag about 12x3 inches, on which was printed "Boom-a-la," floor manager ; this, together with the sunflower he wore attached to his buttonhole while on duty. He was dubbed by all as the right man in the right place. Among those on board were John C. Rankin, Jr., of the firm. E. Wells Sackett, the senior partner, being an invalid, was not present. Of the employees, there were George W. Sackett, Frank Sayre, Henry H. Morgan, H. W. Gordon, foreman of the composing room, and J. O. Kurtzman, foreman of the press room. A representative of THE STATIONER was also present. The order of dance used on the occasion was a fine specimen of the firm's workmanship, the cover being beautifully embellished.

The store of Samuel Raynor & Co., on William street, this city, presented quite a gala appearance last Monday, every portion of the inside of the establishment being beautifully decorated with flags of every nationality, and mottoes bearing the words "Welcome Home" were to be seen on each floor. The occasion of all this display was the "welcome" extended to Mr. Raynor by his large number of employees upon his safe return after an absence of one hundred days on a trip to Europe. Upon Mr. Raynor's appearance at the store on Monday morning he was presented by one of the young ladies on behalf of all of the employees with a very handsome floral piece, and in receiving it he made some pleasing remarks. After partaking of ice-cream and other refreshments, which were plentifully provided, several songs were sung, and work in the establishment was then resumed. Mr. Raynor saw much while abroad that pleased him, and tells some interesting incidents of his trip. He returns home very much improved in general health and appearance.

The *Stationery Trade Journal* (London), speaking of the line of toy books offered by Lawrence Brothers, says that the "letterpress printing by McLoughlin Brothers, of New York, is excellent." Why, of course !

F. Boegle, book and stationery dealer, Virginia, Nevada, is in the city and buying stock preparatory to opening another store in the same business at 31 Dupont street, San Francisco.

Any person wanting the services of a salesman who is reputed to be efficient, is invited to read his card in another column of this issue.

Robert D. Richardson, bookseller and stationer, Winnipeg, Manitoba, is in town.

Philip J. Callaghan, printer, New York city, is dead.

Matilda Valade, dealer in fancy goods, Montreal, P. Q., has failed.

John D. Emmons, publisher, Walpole, Mass., has sold out to Nichols & Co.

A. Hartstein, dealer in notions, Lexington, Ky., is advertising to close out.

B. H. Rothwell, bookseller, Kingston, Ont., is advertising his business for sale.

John Kirschner, printer, New Haven, Conn., has been burned out ; partly insured.

S. Shoninger & Co., wholesale dealers in notions, have dissolved partnership. S. Shoninger succeeds.

J. C. Darrah, dealer in fancy goods, Waterville, Me., is offering to compromise at 40 cents on the dollar.

Carter Brothers & Harman, publishers, Canton, Dak., have dissolved partnership. C. W. Harman continues.

Wilson, Paddock & Co., publishers of the *Advance*, Fort Worth, Texas, have sold out to George B. Loving & Co.

The Rev. E. C. McClintock has bought the business of F. H. & F. W. Long, publishers of the *Gazette*, Neodesha, Kan.

F. L. Patrick, proprietor of the American Publishing House, Columbus, O., has changed his style to Union Publishing House.

The Springfield Printing Company, Springfield, Mass., has issued its illustrated catalogue and price list of patent counting-house calendars. It comprises a great variety of designs neatly gotten up, and ought to be secured by those interested.

Samuel Garre, representing Obpacher Brothers, returned on Monday from a three months' trip in the interest of the firm. Mr. Garre reports having made a successful canvass, and says that, as far as his house is concerned, the prospects for the Christmas trade are excellent.

Charles S. Parker, bookkeeper for the J. O. Smith Manufacturing Company, this city, has just returned home from a two weeks' vacation in Canada, having a brown and healthy look. J. F. Murch, agent for the same company in this city, left here on Tuesday night to take in the Thousand Islands of the St. Lawrence. He will be absent about two weeks.

Hard & Parsons have ready their line of New Year cards. It embraces over forty designs, that are said to be the neatest ever offered. The concern shows a complete new line of wedding papeteries, claimed to be an entire departure from anything previously offered. The firm's travelers are now on the road with samples, which the trade ought to see before placing their orders.

A. Weidmann & Co., toy importers and manufacturers, 306 Broadway, N. Y., are about completing their arrangements for the fall trade, which they expect to be much heavier with them than in any previous year. Their change of location to the centre of the business locality has increased their trade very largely. This enterprising firm has brought out several novelties for the coming season that the trade ought to see. Among the many articles imported by the firm are a full line of German toy and picture books, a fine line of photograph albums, also a large assortment of artistic and ingenious show pieces, and a complete assortment of gold and silver trimmings, stars, spangles, &c., used for theatrical costumes, also the most complete line and numerous styles of masks to be found in the

country. A great many novelties in the toy line have been brought out by this house.

E. T. Jamison, electrotyper, Pittsburg, Pa., has sold out to William J. Barr.

S. B. Cohen, dealer in fancy goods, Pottsville, Pa., has been closed by the sheriff.

The office of the *Putnam County Journal*, Palatka, Fla., has been burned out.

Sopp & Kendig, publishers, Ottawa, Ill., have dissolved partnership. J. F. Kendig succeeds.

W. C. Dunton, of Bulkley, Dunton & Co., and family are rusticating in the White Mountains.

Martin Roberts, manufacturer of stationery, New York city, has changed his style to Roberts & Bokee.

Moore, Sproul & Nichols, manufacturers of paper boxes, New Haven, Conn., have been burned out ; insured.

George Philip Lippe, of Lippe & Thomas, dealers in wrapping paper, &c., and printers, Philadelphia, Pa., is dead.

Keeler & Cornell, paper manufacturers, Campbellford, Ont., have dissolved partnership. Thomas P. Keeler continues.

Osman & Hopeman, booksellers, stationers and publishers, Ottawa, Ill., have dissolved partnership ; each continues alone.

Herman Eastland, bookseller and stationer, and James W. Golledge, publisher of the *Mirror*, Hillsboro, Texas, have been burned out. Both are insured.

E. B. Green, manager of the stationery department of A. S. Barnes & Co., is taking a vacation of about two weeks at Shelter Island. After his return Edward Holmes will take his usual vacation.

The Acme Stationery and Paper Company is receiving large orders for its American blotter tablets from all parts of the country, and it is said to be taking very well. This concern is just putting on the market the "Fac-simile Sales-Book," a labor-saving adjunct in bookkeeping. The use of the ordinary sales-book and day-book requires two complete writings of each sale—one in the sales-book, and one on the bill. Through the use of the "Fac-simile" sales-book one writing is all that is necessary. The first writing of the sale is made upon the bill, and from this a transfer is made, by the ordinary letterpress process to the sales-book. The pages of the "Fac-simile" are ruled with money-columns for extensions, and are so arranged as to provide for the postings to be made direct to the ledger, the same as from the ordinary sales-book blotter or journal.

It seldom devolves on a house to show so very unique and choice a line of cards as those produced by Marion & Co., of London and Paris. These goods are to be found at the show-rooms of Myers Brothers, and the style of some of these works of art is something marvelous. The painting and decorating in silk and plush is so exquisite and the effect is so wonderful that they have only to be seen to be appreciated. Public characters are frequently in hot water—it has been the fate of several to be preserved in spirits of wine, but celebrities are now preserved in oil, that is, painted in oil colors over photos. Among their productions are a number of veritable masterpieces in instantaneous photography with exquisite light-and-shade detail, adapted either for hanging or framing. They have the principal views of London and Scotland, plain and colored, panel size, beveled gilt edges, mounted on first quality card. Special attention is called to the photographs entitled "Bosom Friends" and "Any Port in a Storm," in both cabinet and carte-de-visite sizes.

Henry Levy & Son, 477 Broadway, are exhibiting for the fall trade a line of their manufactured leather and plush goods, which are said to be superior in quality and design to anything made either here or in Europe. These goods are offered at such popular prices that, while they leave the trade a remunerative profit, the firm is enabled to please their customers with articles of acknowledged value at reasonable cost. The firm's line of imported novelties and specialties is well worth the attention of the trade. The concern claims to be the oldest importing fancy goods house in the city, and to have facilities which give it great advantages. Its relations with the European manufacturers is said to be most friendly, and some of them have been trading with the firm for forty years. These offer every facility to place their goods at the disposal of the concern at the earliest time and at the lowest prices. An invitation for an early call is extended.

The attention of the trade is invited to an advertisement of McCarty & Hasberg in another place. The firm says, that the case of goods advertised for $47.50 is of better value than any that has heretofore been put on the market for twice that amount. The articles were specially manufactured for this purpose, and most of them are controlled by the firm. The assortment is certainly very good for dealers, who do not wish to invest much money in this class of goods. The case for $95 is said to exceed anything yet offered for that amount of money. The firm wishes the trade to understand that the novelties controlled by it cannot be seen elsewhere. They are certainly very unique and striking, perhaps the handsomest goods of the kind ever offered. An early call is recommended.

Otto Oberhummer, of Obpacher Brothers, sailed yesterday, per steamship Rhine, for Europe. The principal object of his transatlantic trip is to superintend the production of Easter and valentine goods and other novelties at the firm's factory, Munich, Bavaria. He expects to return about October 1.

Bulkley, Dunton & Co. have just finished a complete renovation of their business offices, so that they present a very fresh and bright appearance.

Myers Brothers are offering some of their old numbers of De La Rue's cards at prices ranging from $3 to $15 per thousand.

T. W. & C. B. Sheridan are very busy, having orders on hand for four very large Auto-cutters. They are obliged to run overtime to keep up with their orders.

R. L. Thomas has sold out his business to John Gibson, and is again connected with that house. He will see his friends in the East and South as usual this summer.

The rag warehouse of Patrick McNulty, 625 South street, Philadelphia, took fire on Monday afternoon, doing damage of about $3,000 to the stock and $1,000 on the building.

A fire at Hillsboro, Ark., on July 28, destroyed sixteen places of business, including the *Mirror* newspaper office. The loss is estimated at between $50,000 to $75,000 ; partially insured.

Charles J. Cohen, Philadelphia, has just received samples of photograph albums representing his purchases in that branch during his recent visit to Europe. It is claimed that this exhibit is the best ever shown in this line, representing as it does all of the desirable goods for the trade to handle. Books of "soap leaves" are also a decided novelty and sample lots should be ordered by every dealer.

Keuffel & Esser, 127 Fulton street, have recently been very busy making extensive alterations in their warerooms. With a view to entirely separate the retail from the wholesale department—a change which has been made imperatively necessary by the rapid growth of their business—they have made such improvements as will now enable them to answer all demands from their customers quickly and in best style. By adding two stories to the large store and basement before occupied, a locality which only a short while ago seemed more than ample, but which of late proved unpleasantly close on all sides, the firm has gained space to put up elaborately and minutely compiled sample collections for the accommodation of its wholesale friends, who periodically appear in person to renew their stock and search for novelties. The firm will give a hearty welcome to any and all of their friends who may call.

FOLEY'S PAT. IMPROVED STYLOGRAPHIC PEN.

Great reduction in price : No. 1, $1.75; No. 2, $2.50; No. 3, $2.50; No. 4, $3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

POSITION WANTED, AS SALESMAN, WITH a good line Jobbing, Stationery and Blank-Book House. Experience of eleven years. A No. 1 references. Correspondence solicited. Address BLANK BOOKS, care of American Stationer.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, AUGUST 3, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE American Paper Makers' Association had an interesting meeting at Saratoga last week, and adopted a plan for unifying the trade. It is time that the paper makers of this country should consolidate their industry.

A CORRESPONDENT calls attention to the fact that he has lately discovered, in buying pens, that he has been supplied "short count" for a gross. He states that from nine and a quarter dozen to ten dozen and three-quarters have been found in the boxes of a "leading" manufacturer. Who this manufacturer is he forbears to state. Are there any other members of the trade who have had a like experience? If there are, we would be obliged if they will give us particulars. We also want to know the name of the pen maker who is addicted to such frauds. Perhaps the "trick" may have been worked after the pens left the factory. At any rate, it is a contemptible, petty theft, whoever perpetrates it, and if we can be supplied with sufficient testimony, we shall not refuse to declare who it is that is guilty of the act complained of. Count your pens!

A FRIEND sends to THE STATIONER a copy of the *Stationery Trades Journal* (London), containing a letter from a New Zealand stationer, in which, although the strong predilection of the writer is apparent, he is forced to pay an unwilling compliment to the American trade. The correspondent starts out by saying that he has "a strong prejudice against everything American, and will not have an article of American production" in his place, if he "can possibly avoid it." He asserts that the English manufacturers make better goods, and sell them cheaper. He is indeed strongly prejudiced, for all of our experience tells us that one of the weaknesses of British manufacture has been to deteriorate in quality to compensate for the reduction in price. But, after all, this querulous individual concedes the point and "goes back on himself," for he says that the producers in the old country "do not seem to have the knack of hitting the public fancy for *light and elegant* goods, nor do they put them up as showily and handily as the Americans." Just so. The English goods are not what people want; they are not nice, and they are not put up well. Again it is stated that American school slates command the market. Anyone who knows anything of such goods can easily understand why. They are made to suit the needs of buyers, and are *sui generis*, and in all of their features are more desirable than the Welsh slates which this victim of Yankeephobia thinks ought to command the market. He says that the neat framing and packing gives our "inferior" article the advantage, but confesses that it "pains" him "to be obliged to pay the Yankees so much good money that ought to go to the old country." It is distressing that Mr. Wayte (that's his name) should be subjected to so much discomfort, sorrow and annoyance, because he is obliged to buy what he calls inferior goods, which, nevertheless he concedes are the best in the market, and are just what his trade demands. He is illogical. All men like him are apt to be illogical. We commend his desire that English manufacturers should improve their goods. We want to see the stationery trade here and in England emulous to produce the best goods and to give value every time. The demands of buyers should not only be met, but should be encouraged, and this cannot be done by giving them "Hobson's choice," as Mr. Wayte expresses it. The "take it or leave it" idea doesn't work nowadays, as it once did. People may take it, but they will leave the manufacturer or dealer as soon as they get the chance—which is usually not very long in coming. The complaint of the English correspondent is something which deserves the consideration of our trade. We must, if possible, advance standards and improve not only upon our neighbors, but on ourselves. It is evident that we are acquiring a strong foothold in foreign markets. That is the greater offense in our opponents' eyes and is the chief reason why an outcry is made. We hope that our competitors will improve, taking Yankee models if they like, but if they think that they are going to beat the Yankee they have got to rise much earlier in the morning and then they will have to —— WAYTE.

CHATTEL MORTGAGES.

The Tariff Commission gave a hearing on Saturday last to C. M. Bonee, Jr., and William Henry Arnoux, of New York, representing the interest of the dealers in foreign newspapers, magazines and periodicals. They represented that business is unjustly discriminated against by the fact that these foreign newspapers and magazines come free through the mails, under the Postal Union treaty, when addressed directly to subscribers in the country, while coming in bulk to the dealers here they have to pay an ad valorem duty of 25 per cent. They ask that newspapers unbound, or magazines and unbound periodicals shall be put on the free list.

Communications.

[Correspondents are requested to write on only one side of their paper. No responsibility for the opinions of correspondents attaches to this paper.]

Is There a Trick?

To the Editor of the Stationer:

I would like to call your attention to "a trick of the trade." I have lately counted the pens in six boxes of the pens of a leading manufacturer and in no case have they contained the number they represented to do. The boxes are marked "1 gross," and are purchased as such, yet the greatest number in those counted was 10¾ dozen, and some had only 9¼ dozen to the box of "1 gross." Your very able exposé of other frauds ought to be followed by one of the "pen trick." M.

ANSWERS TO CORRESPONDENTS.

W.—Wants to know where he can get school-book covers of a certain grade.

Ans.—There are none made except by the parties you mention.

L. G. R.—Wants to know where to get a "power round-corner cutter," with constant up-and-down motion; also cost.

Ans.—It is manufactured by C. R. Carver, 1,022 Hunter street, Philadelphia, and 165 William street, New York. It costs $55. There is another machine made by E. W. Bliss, Prospect street, Brooklyn, N. Y., but we do not know its cost.

AMERICAN PAPER MAKERS' ASSOCIATION.

The American Paper Makers' Association met at Saratoga on July 26, President Wellington Smith in the chair.

The association adopted a form of agreement to be sent to the different mills, with the request that it should be signed and returned to Charles O. Chapin, secretary. The agreement relates to closing down the mills under certain conditions for a specified length of time whenever 75 per cent. of the producing capacity should assent thereto, each class of paper manufacture to act separately in making such an arrangement whenever the mill-owners in such class should think it advisable to limit the production.

The association elected as officers for the ensuing year:

President—J. W. French, Michigan.

First Vice-President—O. H. Greenleaf, Massachusetts.

Second Vice-President—A. E. Harding, Ohio.

Secretary—Charles O. Chapin, Massachusetts.

Treasurer—George W. Wheelwright, Massachusetts.

Boston Division—George E. Marshall, Massachusetts; B. F. Hosford, Massachusetts; H. A. Gould, Massachusetts.

New York and Connecticut Division—W. R. Sheffield, New York; George West, New York; L. Allen, New York.

Philadelphia Division—Charles Hamilton, Pennsylvania; J. A. Dushane, Maryland; Wm. H. Nixon, Pennsylvania.

Cincinnati Division—A. E. Harding, Ohio; N. W. Taylor, Ohio; Charles Bremaker, Kentucky.

Chicago Division—J. W. French, Michigan; John T. Averell, Minnesota; J. A. Kimberly, Wisconsin.

It is sometimes pretty hard to decide which gives us more pleasure—to hear ourselves praised, or to hear our neighbors run down.

OBITUARY.

ALFRED J. FISHER.

Alfred J. Fisher, who for many years past has been known throughout the country as a publisher of valentines, illuminated books for children, and other cheap publications, died suddenly at Craryville, on the Hudson, on Wednesday evening, July 26. Mr. Fisher was a native of Philadelphia, and had but recently celebrated his fortieth birthday. He was married ten years ago, and his widow and three children survive him. Mr. Fisher was a pushing and energetic business man, and during nearly two decades in which he had been in business had been very successful. He was one of the first to introduce to the trade what were alleged to be comic valentines, and found for them a ready market. In January last Mr. Fisher fell down the hatchway of the building at No. 24 Vesey street, in which his manufactory is situated, and received injuries which confined him to his house, at No. 148 Summit street, Brooklyn, for several weeks. Before he was really able to do so, and against the advice of his physicians, he, a few weeks since, returned to the management of his business. A relapse followed and he was again confined to his house. His friends thought that his brain had been affected by his injuries, but that his physicians denied. On Saturday last he went to Craryville, hoping to recover his health there. On Wednesday his friends received word from Mrs. Fisher that her husband was getting along nicely, and nothing more was heard of him until the receipt late on Wednesday night of a telegram announcing his death. His remains were brought to this city on the night following his death. His funeral took place from his late residence in Brooklyn last Saturday.

INK.

Peltz, in *Pharm. Zeitschr. f. Russl.*, recommends the following:

Extract of logwood.....parts.	100
Lime-water.....	800
Carbolic acid.....	3
Common hydrochloric acid	25
Distilled water.....	600
Gum arabic.....	30
Bichromate of potassium.....	3
Distilled water, enough to make.....	1,800

Dissolve the extract in the lime-water, in a porcelain or well-enameled iron vessel, over a steam bath, with frequent stirring. Add the carbolic aud hydrochloric acids, which change the solution from a red to a brownish-yellow color. After half an hour's heating over the steam bath, set the mixture aside until cold, then strain or filter. Now add the bichromate of potassium and the gum, each separately dissolved in a considerable quantity of distilled water, and finally add enough water to make 1,800 parts.

This ink has a fine red color, which quickly turns black. It does not corrode steel pens, and, if it dries up, needs only the addition of water.

IMITATION EBONY.

Wash any compact wood with a boiling decoction of logwood three or four times, allowing it to dry between each application. Then wash it with a solution of acetate of iron, which is made by dissolving iron filings in vinegar. This stain is very black, and penetrates to a considerable depth into the wood, so that ordinary scratching or chipping does not show the original color of the wood. It is a mistake to mix the solutions of logwood and iron before applying them to the wood, as some recipes direct.

VARNISH FOR DRAWINGS.

A varnish for paper which produces no stains, may be prepared as follows: Clear damar resin is covered in a flask, with four and a half to six times its weight of acetone, and allowed to stand for fourteen days at a moderate temperature, after which the clear solution is poured off. Three parts of this solution are mixed with four parts of thick collodion, and the mixture allowed to become clear by standing. It is applied with a soft hair brush in vertical strokes. At first the coating looks like a thin white film, but on complete drying it becomes transparent and shining. It should be laid on two or three times; it retains its elasticity under all circumstances, and remains glossy in every kind of weather.—*Pol. Not.*

Among the visiting members of the trade in the city during the past week were Mr. Moser, of Moser & Lyon, Syracuse, N. Y.; B. F. Blank, Allentown, Pa.; H. C. Demuth, of Easton & Demuth, Sedalia, Mo.; Nic Tengg, San Antonio, Texas; F. Boegle, Virginia, Nevada; Mr. Lathrop, of Redhead, Wellslager & Co., Des Moines, Iowa; A. H. Vail, of Sanborn, Vail & Co., San Francisco, Cal.; O. J. Ramsdell, of T. Sinclair & Sons, Philadelphia, Pa.; Robert Richardson, Winnipeg, Canada; R. Crampton, Rock Island, Ill.; John Toole, of P. H. Carroll & Co., Cleveland, Ohio; William H. Grevemeyer, of Elder, Grevemeyer & Bentley, Philadelphia.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, August 2, 1882.

THE MONEY MARKET.—The supply of loanable funds is still in excess of the demaud, which prevents anything like stringency in the money market. We quote call loans 2@4 per cent., the inside rate on Governments, and discounts of prime mercantile paper 4@6 per cent. The stock market early in the week was weak, with a decline in prices, but at the close there was a partial reaction. with the tone stronger. Government bonds are without material change. Railroad bonds are irregular, with the speculative issues generally lower.

THE PAPER MARKET.—The city jobbing and commission trade in paper continue to report a very moderate business in their sales from store, but a fair amount doing in outside orders. Many shrewd buyers, taking advantage of the lowest prices which have ever ruled in this market for print papers, have been contracting to quite a large extent lately for goods to be delivered in the fall, and from this source there is a good prospect that most mills will be moderately well employed during the remainder of the summer season. The feature of most interest to manufacturers at present is the low water, a fall of three inches below the dam being reported at Holyoke. For this reason there is a general disinclination on the part of manufacturers to increase their line of orders for fear of their inability to make deliveries if there should be a dry season.

THE STATIONERY MARKET.—Trade improves with the advance of the season, many of our city houses being very busy filling orders, a large portion of which comes through mail communication from their representatives out of town. Although fall trade cannot be said to have reached its height, it is under fair headway, and a very active business is being gradually developed. Out-of-town buyers have arrived here this week in considerable numbers, principally from the South and West, and some very large orders have been given. Nothing has occurred to change the favorable idea of trade so generally expressed lately, and the outlook for business through the autumn months never was more promising, based, as it is, upon a great increase in wheat and other crops. Prices remain steady and firm.

JOHN GIBSON, 82 and 84 Beekman Street, New York.

Advertising, Sunday and Day School Reward Cards, Blank Notes, Drafts, Checks and Marriage Certificates.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

THE GREAT ERIE RAILWAY,

LANDSCAPE ROUTE

OF AMERICA.

JNO N. ABBOTT, Gen. Passenger Agt., New York.

ENGRAVING ON ZINC.

Some interesting investigations have recently been made as to the use that can be made of amalgamated zinc. The property of an amalgam of zinc and mercury in repelling fatty ink is already known, drawings made on zinc with mercury being unaltered after an inked roller has been passed over them. If, instead of inking the plate, a very dilute solution of nitric acid (two cubic centimetres of acid in 100 grams of water) be flowed over it, the amalgam will be dissolved, and the lines consequently be etched in; on the contrary, if hydrochloric acid is used, the amalgam is not attacked, b u the zinc is dissolved and the lines are left in relief. Now, proceeding on these principles, if we coat the surface of a zinc plate with some photographic preservative medium, such as bitumen of Judæd or bichromated albumen, the parts where the metal is exposed can then be acted on by mercury, either in a liquid state or in the form of a solution of salt of that metal (like the biniodide), and will be converted into the amalgam, which can be treated so as to produce the image either in relief or in etching, as may be required. Another method of procedure would be to take a copy of a line drawing by the gelatine process, and then dusting the image while still in a humid state will produce biniodide of mercury. This, when dry, would be applied to a plate of zinc, and a copy of the image would be produced on it in amalgam. By then plunging the plate into a bath of nitric or hydrochloric acid, as before, the image will be obtained either in relief or engraving.—*Printers' Register.*

Among the visiting members of the trade to the city during the week, were Fred. Beagle, San Francisco; Mr. Humphrey, Sioux City, Iowa; Richard Crampton, Rock Island, Ill.; F. M. Dillie, Cincinnati, Ohio.

A cold stereotyping process, cheaper than the hot stereotyping papier-mache process, and spoiling neither types nor leads, has been invented by Herr Stosch, Neuer Markt 3, Stettin, Prussia. Though there is no heating, the forms are said to be dried in four minutes.

WATER TELESCOPES.

A writer in one of the popular illustrated weekly journals, speaking of water telescopes, says: "Considering the cheap and easy construction of these useful instruments, it is wonderful that they are not used more than they are, as, by employing them, extremely interesting observations can be made on the denizens of sea or river. To make a water telescope, procure a tube made of tin, and funnel shaped, about 3½ feet long and nine inches in diameter at the broadest end. It should be wide enough at the top to take in the observer's eye, and the inside should be painted black. At the bottom or wide end a clear piece of glass must be inserted, with a little lead, in the form of a ring, to weigh the tube. When the instrument is immersed in clear water, it is astonishing how many fathoms down the observer can see. One of these simple contrivances would greatly enhance the pleasure of water picnics, as much amusement would be afforded by watching the inhabitants below, and it would also prove very useful in surveying deep places that have been ground-baited, for, if no fish were seen collected there, another spot would naturally be chosen. The Norwegians employ this instrument largely for ascertaining the position of herring shoals, and in their cod fisheries. Often, by the use of the telescope, they discover fish which otherwise they would not have known of.

ENGLISH HAND-MADE PAPERS

ORIGINAL EYNSFORD MILLS, WATER-MARK: "FELLOWS" **KENT, ENGLAND.**

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers Lor Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

Proprietor: JOSEPH ARNOLD, Eynsford Mills, KENT, ENGLAND.

Denver, Col.

GEO. W. GOODRICH,

BYRON WESTON

DALTON, MASS., U. S. A.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot. Each sheet is water-marked with name and date.**

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. XII.---NO. 6. NEW YORK, AUGUST 10, 1882. WHOLE NO. 372.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., August 8, 1882.

A few weeks hence, or after the heated term of August shall have passed away, in common with all other classes of tradesmen, the stationers expect a renewal of business, which, during the past six weeks, has been very dull, to say the least. But the quiet season has enabled dealers to get ready for the fall rush, proprietors, salesmen, clerks and boys in the meantime having recuperated perforce "vacations," in anticipation of the coming fray, so to speak.

During the past ten days your correspondent found time to make a short run down East, into Maine, where he found more politics than business. Stationers, however, reported a fair business for the season, and especially was this true in such large places as Lewiston, Auburn, Rockland, Bath and Augusta. Portland, by the way, is one of the most pleasant retreats on the Eastern coast. It is becoming a real live city. The stationers are well represented here, and support very creditable establishments, keeping full lines of goods and making attractive window displays. Portland is the head-centre for quite a large jobbing trade in the stationery line.

One of the leading printing firms in Portland is that of Stephen Berry, who does not only an immense amount of nice work, but is the publisher of much society work. His recent brochure on the oldest Masons in the country will prove of interest to the craft.

The jobbing trade in Boston has improved during the past few days, and the wholesalers generally report an excellent outlook.

Prices for raw materials continuing firm, dealers in paper expect to realize slightly advanced prices later on. The low stage of water in many of the streams has caused a good many mills to temporarily suspend operations. Stocks of manufactured goods, however, are in good supply, and the curtailment of production will tend to make prices still stronger for a short time, at least.

The retail trade among the stationers is excellent for the season, and the nearby trade is quite satisfactory.

The trade are glad that the Standard Envelope Company has come to an agreement, for now dealers know what to depend upon for the next twelve months, if not longer.

The art novelty manufacturers have their Christmas and other seasonable cards ready, and drummers are in the field in force selling them. The demand is reported good, but it will be more active later on.

The Forbes Lithographic Manufacturing Company, 181 Devonshire street, reports an unusually large prospective business in its line for the fall months.

Wm. S. Davis, manufacturer of the United States Treasury Mucilage, is fairly busy in responding to orders, even during this "sticky" weather.

Lieutenant-Governor Weston, the celebrated paper manufacturer of Dalton, Mass., has gone abroad for a few weeks.

Ward & Gay, 178–184 Devonshire street, have one of the most complete stationery establishments in the city; blank-books and cards are a specialty with this firm. Trade is good with this concern.

Work is fairly active at the Riverside and other large printing establishments, and several of the popular publishers promise new lines of desirable books in the fall.

The loss of the State printing for another term by Rand & Avery is a warning against a too strong desire to become a member of the Legislature. L.

CHICAGO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS,
8 Lakeside Building,
CHICAGO, August 5, 1882.

Were it not for the warning conveyed by the case of your St. Louis correspondent, a list similar to his might be made of the Chicago trade, showing little more variation than his, from "dull" to "quiet," and from "quiet" to "dull." But, for fear of the results of personality, suffice it to say, without mentioning names, that though Chicago has experienced little "dog-days" weather, the trade feels that they are here. With stagnation staring one in the face at every turn, what news can be expected of the trade?

But a letter is necessary, and "if 'twere done, 'twere well 'twere done quickly."

H. A. Taylor is off on his long vacation in the land of milk and honey, "wooden nutmegs and sawdust hams," and he has a long list of business men to "keep him company in being absent."

Will it be news in the East to know that the weather throughout this section of the West has been delightfully cool and pleasant—with rare and brief exceptions—during the entire season? or will it only add to the tortures of the metropolitan Tantalus to be so informed?

The Illinois Nut and Bolt Company, whose card is now in, or will soon appear in these columns, forwards a catalogue to this office. This concern manufactures the largest line of letter-presses in the West, and, it is claimed by some, no larger line is to be found in the United States. The catalogue illustrates and describes some thirty styles, mostly furnished in different sizes, and all are recommended as of superior construction, pattern and finish. The prices range from $5.50 to $100. Stands for the same are also offered in various convenient and attractive shapes.

The Campbell Press Company has forwarded a circular containing a number of second-hand bargains in various makes of job and cylinder presses.

It is "dull times" indeed when H. McAllister & Co. have nothing new to offer in the line of fancy cards. Their latest is numbered 1032, and consists of four neatly and prettily designed and executed kitten heads on a gold background, cut to palette shape.

Possibly it will not take up too much space to give a little correspondence which recently passed between the Sanford Manufacturing Company, of this city, and Cunningham, Curtiss & Welch, of San Francisco. With the premise that business correspondence has passed between the two firms prior to the following, the appended letters will explain themselves and develop into a good joke of THE STATIONER'S warm friend, Mr. Redington:

CHICAGO, June 15, 1882.

Messrs. Cunningham, Curtiss & Welch, San Francisco, Cal.:

GENTLEMEN—About half-past eight o'clock last Sunday evening a gentleman called at my house, on Washington street, and said his name was Curtiss, of Cunningham, Curtiss & Welch, San Francisco; that he had arrived in the city that morning, and called to see if any mail had been received by us for him. He seemed quite disappointed at finding nothing had come for him; said he had directed his mail to be forwarded to us, and even expected a telegram. He made quite a call and told many things about your firm, appearing to be well posted about your business and knew we had some correspondence. He said he was stopping with friends in another part of the city, who had directed him where to find me. When he left he made an appointment with me to meet him at our office about 9:30 Monday morning, and had me tell him very particularly how to go to the main office of the Western Union Telegraph Company. About five minutes after leaving my house, he returned, saying he wanted to send a dispatch, and had just discovered he had left his pocket-book in another pocket, having changed clothes before starting out, and asked if I could let him have a little change. I happened to have just $1.80 in silver in my pocket, which I handed him. He said he wanted $2.75, and I gave him another dollar, whereupon he departed, and has failed to turn up again. There was but one thing in the whole affair that looked wrong. May 1st I moved from Jackson street to Washington street, and since then our

directory has not been changed. He found my address on Jackson street in the directory, and went there first, but failed to get in. At one of the neighbors, he said, he learned where we had moved to, and *that they had very kindly told him how to find Washington street.* This was not true. My sister happened to be in the house where he inquired, when he called, and when he was told we had moved to No. —— Washington street, he immediately started in the right direction, without making any inquiries, and seeming to know just where to go.

We do not write on account of the $2.80, of course, but because we think this man, whoever he is, is well posted in regard to your business affairs, and may do yourselves or others some more serious injury.

Very truly yours,
W. H. REDINGTON, Secretary.

Following is the reply from Mr. Curtiss:

SAN FRANCISCO, June 22, 1882.

W. H. Redington, Secretary, Chicago, Ill.:

DEAR SIR—Your favor of June 15 came to hand yesterday. I regret exceedingly that any rascal should have personated me to the detriment of anyone else. I have no idea who this fellow can be, though I have racked my brain in trying to fix on some one who might have done this thing. Am very, very sorry I have been made a cat's-paw by any one, though I can see no way of preventing this sort of enterprise. Hope this individual's ambition to get rich at my expense may lead to his detection.

Yours very truly, E. B. CURTISS.

Possibly the present publication in these columns may lead to the wished-for end. Stationers and others would do well to remember this incident.

Skeen & Stuart intend to push very extensively the holiday card trade this year. They announce elsewhere the "Dudley collection," which comprises a fine and varied selection of most unique, novel and beautiful designs. Some tasteful novelties in fringe combinations and effects will be introduced in this line.

The Chicago, Rock Island and Pacific Railway has put on through cars between Cincinnati and Davenport, via Seneca, Kankakee and Indianapolis, making close connections with fast express trains to and from Minneapolis, St. Paul, Des Moines, Council Bluffs, Kansas City, Cincinnati, Indianapolis and intermediate points. This constitutes a quick and short line between the Ohio River, the Missouri and the upper Mississippi, with practically no change of cars, and no re-ticketing or re-checking of baggage. This route ought to and undoubtedly will become immensely popular with travelers, as they will have the benefit not only of a journey through a beautiful country, but the privilege of riding over first-class roads, in cars which have gained the reputation of being as comfortable and beautiful as any in the world.

This letter, which was expected to be lamentably short, has turned out lamentably long; so before another thought suggests itself, behold the trade-mark, G. B. H.

CHROMATIC PRINTING MACHINERY.

Joseph Augustin Hense and Georges Jouanny, of Paris, have recently invented improvements in chromatic printing machinery, of which the following is an account:

The invention more particularly relates to cylindrical chromatic printing machines, and its object is to provide an improved machine for the printing of wall-paper or hangings or other work, that is to say, printing in various colors upon a continuous strip or web of paper. In the machine, the cylinder having the devices for insuring the proper registering of the colors is an indispensable auxiliary for effecting this object during the first passage of the sheet through the machine, also for the subsequent impressions of other colors, and thus the printing is effected with exactitude and regularity.

In carrying the invention into practice, the inventor provides a reel upon which the sheet or web to be printed is wound; as it unwinds from this reel the paper passes to the cylinder, upon which are arranged devices for securing the registering of the separate colors; it goes thence to the small roller, from which it passes tangentially to the blanket cylinder, which is in direct frictional contact with the two cylinders, upon which are the plates containing the design or pattern, or a portion thereof, to be impressed. The paper receives one color from one cylinder, and a second color from the other cylinder; it is then released, and goes to a drying apparatus of ordinary construction, and is dried in the air.

The chief novel feature of the invention consists in the arrangement whereby the inventor is enabled to effect the perfect registering of the colors in the first and subsequent impressions—that is to say, when the paper passes through the machine subsequently to the first passage, this being effected by regulating the two cylinders, carrying the patterns or designs according to or in conjunction with the color-registering devices on the first-named or registering cylinder. For this purpose there is provided on the first pattern or loose design cylinder a driving wheel, which is loose on its spindle, there being another wheel which is fixed. On the second pattern cylinder there is a circular plate or disk, which is keyed on its spindle, and there is also a wheel which is loose. By means of these parts, the position of the devices on these cylinders for insuring the proper registering of the colors may be regulated by screws so as to perfectly coincide with those on the first-named or registering cylinder. The loose wheel on the first pattern or design cylinder, also the disk on the second pattern or design cylinder, are pressed into contact with the two other wheels; this operation is effected every time that a slight displacement takes place in the paper, which would affect the accuracy in the registering of the second or subsequent impression when the paper has been rewound upon the reel after being dried.

In this machine the pattern or design cylinders reproduce a continuous design, which may or may not be repeated upon their circumference.

In printing colors the distribution must be effected with considerable power and regularity of touch, without which spots or lumps, caused by the sudden impact of the colors upon the pattern or design cylinders, would cause an unequal spreading thereof upon the pattern or design to be reproduced. The devices employed for the distribution of the colors are as follows: Each pattern or design cylinder has in connection therewith a separate color reservoir, in which a roller revolves. For the first pattern cylinder the color taken up by the revolving roller is conveyed to another roller in contact therewith, which deposits it upon a cylinder. For the second pattern or design cylinder the color is taken from the roller revolving therein and conveyed to a cylinder, but by means of an additional roller. In connection with each of the cylinders there are three distributing rollers, which move in a contrary direction to the cylinders.

The color is conveyed to the pattern cylinders from the cylinders upon which it is deposited, as above set forth, by means of seven rollers on each side, four of these rollers on each side being in contact with one of the pattern cylinders. Two of the rollers in contact with those next the pattern cylinders have a motion in a contrary direction to that of the rollers, which they touch so as to distribute the color regularly or evenly on the latter.

The blanket cylinder, which receives the pressure of the pattern or design cylinders, is provided with an endless blanket, which passes around a roller and is thus stretched.

For large establishments, two or more of these machines may be employed, and placed in connection with each other, being caused to work together at exactly the same speed. This arrangement obtains successively and at one passage of the sheet a greater number of colors printed side by side, or over or upon each other. This arrangement has also the advantage of economizing time considerably with respect to drying, and the changing of color distributing rollers and patterns or designs. The machines are coupled or joined as follows, that is to say, upon the driving shaft of one machine there is a bevel-toothed wheel, which by means of a horizontal shaft and another toothed wheel sets in motion the driving shaft of the next machine. Upon the driving shaft of the first machine is a fly-wheel and a pulley, the latter receiving the strap or band which imparts the necessary motion. The paper as it comes from the first machine is placed by means of its first register mark upon the corresponding device on the registering cylinder of the second machine, and passes thence to the pattern cylinder of this machine to receive other colors, these cylinders having been previously regulated, as described, with respect to the first machine.

The use of china mattings for decorative purposes is calling upon the ingenuity of upholsterers for new methods in this line. Whole rooms are now covered with this fabric. The dado is generally made of the dark olives, old folds, blues or crimsons, in solid colors, with a dado rail of ebonized wood or brass, which is very bad, or best of all, split bamboo. For the field or filling, plain white or fancy matting in neat small figures is used, the panels being marked by split bamboo, while the frieze is constructed of narrower borders of another shade of fancy or of solid color. This, with a floor covering of handsome seamless matting with a contracting border, makes a scheme of decoration, which, especially for a summer-house, is very striking, appropriate and pleasing.

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

☞ ANNOUNCEMENT. ☜

WE beg leave to announce the completion of our line of CHRISTMAS and NEW YEAR CARDS for the Season 1882–1883, for which our Agents will commence to solicit orders in May. We feel confident that the popularity which our Cards have enjoyed in former seasons will again be secured by the efforts we have made to bring out a line in advance of all our previous productions. The names of the Artists who have contributed designs is proof of our continued efforts to reach the highest excellence. We will name only the following:

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,

MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

Due regard has again been paid to the literary matter in connection with the designs, and many of the latter are accompanied by original poems, from writers of note, such as MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

Fringed Cards—All furnished with envelopes and protectors.
Envelopes—Furnished without extra charge for all cards for which the list price is $1.80 and over.
Backs have been specially designed for our cards, adding an attractive feature to them.

Bird Cards, by Miss F. Bridges, Mrs. O. E. Whitney and others
Figure Cards, by Miss L. B. Humphrey, Miss Rosina Emmet, Miss L. B. Comins, Alexander Sandier and others.
Flower Cards, by Mrs. O. E. Whitney and others.
Fan Cards, by Mrs. O. E. Whitney, in new styles.

PRANG'S PRIZE CHRISTMAS CARDS.

THIRD COMPETITION

FIRST.—Artists' and Popular Prize Card ($2,000), by Miss Dora Wheeler,

Something Quite New in NOTE PAPERS.

THE "Morocco Leather Note Paper." | THE "Russia Leather Note Paper."

THE STATIONERY TRADES JOURNAL says: "This is perhaps the most decided novelty in note paper and envelopes that has been offered to the trade since the advent of 'Repps.' The surface of the paper is lightly embossed to resemble the peculiar grains of morocco or russia leather, but while the imitation is perfect, the surface presented is pleasanter to write on than in the repps, and for this reason the paper will be found to suit a large circle of consumers. It has a rich and dainty appearance, qualities which are even more strikingly displayed in the envelopes. In either grain the paper is offered in four tints, with court-shaped envelopes to match. The price is moderate, ranging with the best class of medium qualities, and the paper will consequently command a very extensive trade, its pleasing novelty insuring its admission to the best, and its price not forbidding introduction in lower class businesses. The packeting deserves a word of notice for its very neat appearance. We believe the paper will take the public fancy in a way that nothing else of the kind has done for a long time."

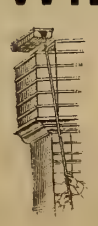
Improved Bookbinders' Machinery & Tools,

CHICAGO, ILL.

STILL ANOTHER IMPROVEMENT IN

ROLLER BACKING MACHINES.



(PATENT PENDING.)

By the use of our new Improved Roller Backer you can back a LARGE or SMALL quantity of books, of different sizes, as the Roller is adjusted by turning the handle on right, which runs the steel-cut beveled gears, and carries the Roller up or down very rapid and true every time, for any thickness of books, the first time, thereby saving great time and labor. There is no strain on the thread that carries the Roller. This is the only Roller Backer made which can be adjusted for a few books without a great deal of time and trouble.

This machine is built in a very superior manner, with steel connections, and the holes are reamed out; steel jaws, and made extra heavy for hard work. It has a triple spring for rest on back, to prevent the jar of the whole body in running the Roller clear back. This machine is pronounced, where in use, to be the strongest and quickest adjusted machine ever made. Can be adjusted from a 4-inch book to a ¼-inch book instantly, ready to make a TRUE BACK without loss of time, and the workman cannot but make a true back on every book.

Length of Jaw, 18 inches. Price, $325.

WILLIAMSON'S MAGIC POLE

For taking down from high piles, or shelves, or putting up in high places, any kind of box having a projecting lid. Delivered to any point in the United States except the Pacific Slope, for $1.25. Liberal Discount to the Trade to sell again.

Patented July 12, 1881.

WILLIAMSON'S GRIP TABLET.

The GRIP TABLET is a case to hold from 1 to 150 loose sheets of Note Heads, Letter Heads, &c., binding them at once into tablet form, or blocks, without the use of glue, paste or any other contrivance, which mars the beauty of a well printed sheet, and is no larger than an ordinary tablet, and is renewable; the sheets are simply drawn out. Inclose 25 cents for a sample of any desired size.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

It will be advisable and profitable for dealers to read page 220 of this issue.

Randall, Mills & Edsell have succeeded the Hills Paper Company, Delaware, Ohio.

Richeimer & Samuel, paper stock dealers, Newark, N. J., have dissolved partership.

Price & Lawrence succeed Edsall & Price, wholesale dealer in notions, Newark, N. J.

McLoughlin Brothers have this week made large shipments to Lawrence Brothers, London.

Ferrill & Coates, publishers of the *Herald*, Silver Cliff, Col., have sold out to Charles W. Barry.

A receiver has been appointed for S. Rosenbaum & Co., dealers in paper and paper bags, New York city.

W. K. Evans, of Evans & Gardner, sailed on Saturday from Liverpool for this city, per steamship City of Montreal.

A good salesman, acquainted with the trade in the South and West, can find a situation in Philadelphia. See advertising columns.

Fire on the top floor of No. 113 Liberty street, on Wednesday, damaged property belonging to William Dunbar, printer, $200, and the building $300.

The *Tribune* Printing Company's building and its contents, at Hamilton, Ont., were burned on Sunday night. The loss is $30,000; insurance, $16,000.

The firm of Barnard & Williams, publishers, Corpus Christi, Texas, has been dissolved by the withdrawal of Mr. Barnard. William Carruthers has taken his place.

Aikin, Lambert & Co. are as busy as they can be, and are making extraordinary preparations for the fall trade, for which they will have many new designs and novelties.

A fire broke out on Thursday morning, August 3, in the Providence Paper Mill, owned by the Philadelphia *Record*, seven miles from Elkton, Md. The loss was $15,000; insurance, $87,000.

J. R. Page has retired from the firm of Campbell, Page & Thorn, wholesale dealers in notions, St. Paul, Minn. George R. Lewis has been admitted under the style of Campbell, Lewis & Thorn.

McCarty & Hasberg have this season added several new lines to the large and varied stock which they usually handle. Most of the articles in these are so strikingly beautiful that it would well repay the trade to visit New York to inspect them.

J. H. Bufford's Sons are still making improvements in their new store. Last week considerable shelving was added, which is being filled with new lines of goods, preparatory to the fall trade. The firm has recently introduced an elegant new line of plaques.

The Esterbrook Steel Pen Company has recently introduced a new pen-holder to accommodate its mammoth Falcon pen. The holder is made of cedar, and is light. The pen-holder is just intended to prevent hand cramps and writers' paralysis, as it is large, light and all wood, with rubber socket, there being no metal to "draw any electricity from the fingers."

The fifty-dollar sample lots imported in previous years by John Wilson's Sons met with such general appreciation that each season produced demands greater than their importations could supply, and consequently many late orders were declined. Notwithstanding these continued successes, that firm has learned that special lots are accompanied by consequent drawbacks; and to meet the more general requirements it has decided to furnish elegantly illustrated catalogues, showing over one hundred specialties adapted to the fall and holiday trade, from which buyers can select *ad libitum*. Taken together, the entire lot makes a splendid assortment of card receivers, inkstands, calendars, letter racks, library sets, perfume stands, odor bottles, flower holders, cigar cases, smokers' tables, &c., well calculated to fill showcases and windows in any large metropolitan stationery establishment; while for smaller stores throughout country towns selections can be made according to locality and trade demands. It must further be remembered that this firm does not offer a repetition of previous years' styles, nor a blind following of general styles handled by importers at large. It owns and controls exclusively choice designs, executed specially to order by the best European artists, and instead of following in the wake it claims to carry the advanced wave of fashion and taste. Any reputable dealer can obtain one of its catalogues, postage paid, but the firm will not notice applications from parties not regularly in the trade.

A handsome mantel ornament, consisting of an artist's easel and a beautiful landscape picture in colors, will be mailed free to every person who will send the names and post-office addresses of ten young people. Each address to be different and plainly written. Address the Assistant Publishing Company, Fifth and Chestnut streets, St. Louis, Mo.

David Weingarten, representing S. Trier & Son, New York city, manufacturers of cardboard and cut cards, will be on the road in a few days with a full line of samples. His line will also comprise a varied assortment of new styles of beveled and chromo cards. His customers will no doubt be glad to meet him.

W. Gaston Hooper, formerly a silent partner, has recently become a general partner in the firm of John W. Kennedy & Co., commercial stationers and printers, 63 South Second street, Baltimore, Md. The business of this firm is rapidly increasing, and even at this comparatively dull season it is doing an excellent trade.

John Wilson's Sons are out with one of their characteristic announcements, which is entirely in keeping with their enterprise and unceasing efforts to advance the interest of novelty buyers.

Charles J. Cohen, Philadelphia, reports recent arrivals of boxwood scales, wood Staunton chess, crayon paper in new qualities and shades, and many articles required at the present season.

C. M. Ward, representing the Springfield Printing Company, is on the road with samples of patent calendars, and hopes to call on the trade generally.

H. H. Plant, of the firm of J. H. Hamburger, returned from Europe per steamship City of Richmond, on Saturday last.

John Petrie, Jr., reports an excellent business in A. B. French's inks and in perforating machines.

A. Liebenroth, of Liebenroth, Von Auw & Co., went on Monday to the Catskills.

J. A. Blake, publisher, Denver, Col., is dead.

J. W. Lineringhouse, publisher, Juniata, Neb., has sold out.

J. B. Neff, fancy goods dealer, Santa Cruz, Cal., has sold out.

John Foley, printer and publisher, Orangeville, Ont., is dead.

Mrs. C. Bresslan, dealer in notions, Columbus, Ohio, is advertising to close out.

Robert Easton, bookseller and stationer, Lindsay, Ont., has sold out to J. R. Easton.

The stock of T. F. Palmer, dealer in fancy goods, San Francisco, Cal., has been attached.

I. E. & C. L. Messmore, publishers of the *Democrat*, Grand Rapids, Mich., have sold out.

Loeb & Gumbel, wholesale dealers in fancy goods, New Orleans, La., have dissolved partnership.

Moyer & Karnes, fancy goods dealers, Seattle, W. Ter., have dissolved partnership. G. F. Moyer continues.

Wells & Beard, publishers of the *Times*, Wapello, Iowa, have dissolved partnership. Beard Brothers succeed.

When Wm. F. Wilson, the buyer for Jno. Wilson's Sons, was crossing the Atlantic on a recent trip, a stranger, hearing his name, asked if he was a member of John Wilson's Sons. Affirmative answer being given, the individual, a buyer for a large Western house, remarked: "Yours is the best advertised house in America; wherever our travelers go, every one seems to know John Wilson's Sons."

Myers & Brothers have open for inspection at their warerooms, 62 John street, samples of Raphael Tuck & Sons new Royal Academy series of cards, which are reproduced from designs supplied by several of the most eminent and well-known members of the Royal Academy. These novelties, by virtue of their pre-eminence, demand attention. Among them are designs by T. C. Dobson, J. E. Hodgson, J. R. Herbert, E. J. Poynter, W. F. Yeames, J. C. Horsley, G. D. Leslie, J. Sant and Marcus Stone, who have successfully applied their artistic powers to this comparatively humble field of labor. Mr. Dobson gives some delightful studies of children's heads; Mr. Hodgson two designs of English country folk; Mr. Poynter goes to Pompeii for his inspiration, and the result is two beautiful Pompeiian designs; Mr. Yeames draws some graceful girls, apparently having a contest with cupids; Mr. Horsley works out a study of children, while some beautiful specimens of Mr. Sant's children's faces are given in a study of infant angels; Marcus Stone contributes some finished sketches of maidens and young girls. The execution and the workmanship are excellent in taste and finish, and leave nothing to be desired in that department. Turning to Messrs. Tuck's book of general samples, which contains a surprising number and variety of designs, several old favorites and popular patterns will be found, together with an ample assortment of designs that have not hitherto seen the light, and out of the whole the most peculiar and eccentric individuals can hardly fail to find something which pleases their taste. Some of the children subjects reach a very high standard of excellence and variety, and every now and then there are some that marvelously resemble the well-known figures which Kate Greenaway is so fond of drawing. There are, also, one or two hunting and coaching subjects, in which the manner of Randolph Caldecott is suggested. The assortment of cheap cards is very large and varied in which all sorts and conditions of purchasers will find much that is worth their attention;

sentimental and comic subjects, figures of children, fruit, flowers, bouquets in vases, embossed cards, and the like, are here in great profusion. The "Six in a Bed" series again appears, together with the winged angels of last season, while palm leaves and fans have all been laid under contribution. Children and animals are also represented, as well as Christmas scenes, studies from still life, æsthetic emblems, mediæval illuminations, and a host of similar subjects, all of which, as to coloring and drawing, are tastefully and artistically executed. Among the more expensive cards are several well-finished figure subjects, landscape and marine views, plates, open books, and other shapes, together with scenes like etchings colored by hand, emblematic female heads, and several female figures of the Italian Renaissance style, which are particularly well finished. On all the cards the lettering is carefully and tastefully executed, and the words chosen are very appropriate. As a whole, the samples exhibit several new departures in style and finish, which promise to be well received, and which favorably distinguish these patterns from those of previous seasons. At the same time it is evident that the firm has retained more than one artist whose productions last year were especially successful. The idea of enlisting the services of a number of Royal Academicians to furnish designs of this nature has at least the merit of boldness and originality, and whatever else may be in store, the "Royal Academy" series will assuredly be one of the leading specialties of the coming season.

William Sametz, 52 John street, shows something new in papeterie cabinets. These are covered in white silk plush, with the lower left-hand corner of the top of "merveilleux blue" silk to represent a turned leaf, an idea entirely original with Mr. Sametz. The cabinets have a drawer for envelopes in the lower part. Another novelty is a combined stationery cabinet and jewel case, lined with satin and covered with two colors of silk plush, one of which is a circle forming an ornamentation for the top. A wedding offering is a fan, made of silk, the outer edges being puffed with a satin centre-piece, hand-painted, and an appropriate sentiment. Sachets for Christmas offerings are made of gros grain white silk, fringed and ornamented, with hand-paintings very artistically executed. A feature of his new goods is a satin New Year card, 5x8 inches, ornamented with decalcomanie work, and which has been selling very well, indeed.

Attention is directed to an announcement of W. P. Dane, in another column, of two lofts which he has to let on the second and upper floors of his building, 61 Beekman street. They are spacious, well lighted, and adapted for manufacturing purposes or a salesroom. The building is supplied with power. The lofts are 100x25 feet. The building is nicely lighted on Beekman, Gold and Ann streets, and if wanted for a salesroom it will be fitted up to suit lessees. The building is supplied with power elevators.

John Toole and P. H. Carroll, of Cleveland, have been in the city this week buying goods, with a view to starting the stationery business at that place under the style of P. H. Carroll & Co.

H. B. Peters, bookseller and stationer, Logansport, Ind., has admitted G. W. Bell to partnership, under the style of Peters & Bell.

Eberhard Faber embarked on August 3 on the steamship Elbe at Southampton, England, bound for this city.

Robert Lyne, news dealer, &c., Belton, Tex., has been burned out.

Peter Mitchell, of Mitchell & Wilson, printers, Montreal, Canada, is dead.

Beadle & Brown, stationers, &c., New York city, have dissolved partnership.

Henry Hagell, dealer in fancy goods, Newark, N. J., has been closed out by his creditors.

J. Val Koch and family have just returned from a three weeks' visit to Lake George.

Howard Jenkins, newsdealer and stationer, Hyde Park, Mass., has had his stock attached.

Mr. Gissel, of Wood & Gissel, Dubuque, Iowa, arrived here this week en route for Europe on a pleasure trip.

Otis McCollum has withdrawn from the firm of L. C. Woodruff & Co., wholesale paper dealers, Buffalo, N. Y.

George A. Raisbeck returned home a few days ago from a six weeks' trip for Ph. Hake, and he considers it by far the best trip he ever made.

Thomas Gibson, managing salesman for Henry Bainbridge & Co., is making a brief sojourn with his family at the Agnew House, Ocean Grove, N. J.

Evans, Plummer & Co. show some very beautiful conceits in birthday, Christmas and New Year offerings. Compliments and congratulations are extremely handsome. Paintings on ivory are a feature of their birthday offerings. White plush silk papeteries on easels, with mirrors in front, and ornamented with satin paintings, are noteworthy.

R. Fideau, 16 Beekman street, is manufacturing school bags in large quantity. Mr. Fideau has on his order-book more than 300 gross of hemp bags to deliver before the expiration of this month. His water-proof satchels and silk-hemp bags are meeting with a great demand; and he claims that they are the neatest and cheapest articles in this line in the market.

Henry Levy & Son show an elegant line of Vienna gilt bronzes, which includes smokers' stands, odor stands, inkstands, vases, card receivers, liquor cases, &c. Some of these goods are rich, elegant, and of unique design, and their selection indicates the great taste of the senior member of this firm, who spent several months among the leading factories in Europe in order to secure elegant goods. Among the articles may be mentioned a card receiver, which is composed of a gilt horse-shoe surrounding an oxidized plate, supported by three grooms dressed to represent those employed in the stables of Belmont, Lorillard, and the Marquis of Lorne; inkstands and candlesticks match this in design, and are intended to go with it in a set. The cigar-stands are also well worthy of notice. Several specimens represent bee-hives and bee's nests, with the insects hovering about the entrance, and with bears hugging the former preparatory to an attack. Other goods in this line will be described in future issues of THE STATIONER.

M. L. Leman, one of the oldest houses in the United States, reports trade to be equal to that of a year since, although some firms report quite the reverse of this. Mr. Leman has a long list of old customers extending through half a century or more, and hence he can rely on an average good trade from year to year.

J. F. Hitchcock, formerly of 76 Duane street, has given up the several agencies which he conducted there to accept a position in J. D. Whitmore & Co.'s factory at Holyoke.

A. Carlisle & Co., stationers, &c., San Francisco, have removed from 221 Sansome street to 226 California street in that city.

T. J. Kellam, of T. J. Kellam & Co., Topeka, Kan., is expected in the city this week.

WANTED—SINGLE MAN FOR TRAVELING Salesman, one who fully understands the Blank-Book, Lithographing and Printing Business, none other need apply; best of references required. Address, stating salary wanted.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, AUGUST 10, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE complaint of a correspondent as to short count in pens has excited some comment among the pen manufacturers. As will be seen, one firm writes to THE STATIONER and wants the name, and a member of another well-known firm informs us that he has had reason to suspect that something of the kind was done, and that he had the notion of calling attention to it. The question will be: When and by whom is the fraud perpetrated? There are possibly other people than the correspondent who made his complaint last week that have been similarly treated. If the trade will follow up this short count business, and find out where it originates, and make it known, they will possibly be able to effect a cure. It will certainly redound to their benefit. Let us have the points.

APPREHENSIONS as to an unfavorable turn of trade seem to be dispelled for the present. The assurance of plenty throughout the land warrants the holding of fears in abeyance, but there is no less reason for prudence in every commercial transaction. Prices generally are low, and in papers particularly so. The demand may warrant an advance, and it certainly ought to sustain going quotations. But the trade must not think that purchases can be made or sales effected upon hazard. There has been too much risk-taking, and it is well to avoid the danger of its recurrence. Be wise in time, provide reasonably for prospective wants, but don't overdo business. Then everyone will be safe. One of the happiest indications is the rarity of failures in the trade. The readers of THE STATIONER have probably remarked this, and have found in it good reason for encouragement. Why should not this condition continue?

THE *Papier Zeitung*, of July 13, contains an editorial on the desirability of founding a network of local boards of trade, both in the paper and stationery branches all over Germany, such local boards to correspond and co-operate with the protective unions of the paper makers and of the stationers. The *Zeitung* casts a retrospective glance at the ancient institutions, the corporation (Zunft) and the guild (Gilde), of which the one represented the mechanics of a place, and the latter the traders and merchants. In modern times the wholesale manufacture of articles of daily use, as well as the enormous expansion of commerce, have radically changed this ancient guild system. Industrial unions and chambers of commerce have taken their place. Although the introduction of steam locomotion has facilitated general meetings of "industrial unions" annually, either at the capital of a country or at the capital or main centre of distribution of a State belonging to the confederation, manufacturers located at remote points find it inconvenient to lose time or too expensive to attend these general meetings, and the result is that many valuable personal acquaintances between competitors are not made. The first and chief motive for these general annual meetings was to protect and promote common interests, and to establish a general understanding as to who among dealers and retailers was worthy of credit. While these objects were fully attained, it was found that the personal acquaintance with competitors was really of the greatest benefit, inasmuch as it often led to the removal of the damaging effects of competition. Local organizations might avert this and insure the mutual protection and promotion of common interests, and would facilitate, by their reports, the business usefulness of the annual general meeting. At Leipsic a paper makers and stationers' Board of Trade has existed for years with beneficial results, and at the late Nuremberg meeting a motion was made to recommend the formation of similar boards at all of the chief localities in Germany. This motion was unanimously adopted, and fifteen Nuremberg firms at once formed a local board. The plan of subdivision, is substantially that of our own Paper Makers' Association. We think that the latter might be further subdivided to greater advantage, and hope to see the time when all of the paper makers of the country shall be members of one union. The same plan could be reasonably adopted in the stationery trade. The envelope manufacturers have at last "pooled their issues," and there seems to be no reason why mutual benefit should not accrue if manufacturers were allied more closely and could meet to know each other better and harmonize their differences.

NAME WANTED.

PHILADELPHIA, August 5, 1882.

To the Editor of the Stationer:

We note the letter of your correspondent "M.," in your issue of 3d inst., stating that he found short count in the boxes of pens purchased by him. As there are several steel pen manufacturers in this country, the finger of guilt will point to all until "M." names the manufacturer. Therefore, in justice to ourselves, we trust that he will at once make public the name of the party alluded to.

TURNER & HARRISON.
Steel Pen Manufacturers.

ANSWERS TO CORRESPONDENTS.

C.—Wants to know what is the name and address of the manufacturer of or dealer in Miller's book clamps.

Ans.—William Allen Miller, the manufacturer, can be found at 805 Broadway, New York (S. S. Packard's Business College). Selchow & Righter, of this city, sell them.

OBITUARY.

JOHN SAWYER.

John Sawyer, a wealthy Brooklyn real estate owner, and said to be the oldest blank-book binder in the city, died on Tuesday at his residence, No. 152 Bergen street, Brooklyn, of Bright's disease, after an illness of two days. He was in his sixty-fourth year and was born in London, England, in 1818. Arriving at manhood he learned his father's trade, that of a bookbinder. In 1847 he arrived in this city and found employment at his trade with Hogan & Co., Nos. 9 and 11 Thames street. By industry and thrift, he was enabled, after four years of

service, to purchase the business and finally to buy the buildings in which it was located. He was one of the organizers, and for many years treasurer, of the once famous Oceanus Club, a Brooklyn political organization that existed contemporaneously with the Americus Club of this city, and was composed of representative men of Brooklyn. He was a director of the Franklin Avenue Railroad of Brooklyn. He was also a member of the Morton Commandery, of this city, and the Nassau Lodge of Brooklyn. He leaves a widow and three grown children. He will be buried on Saturday with Masonic honors.

CHATTEL MORTGAGES.

BEAUTIFUL FANS.

Among the many beautiful presents given by the Duke of Albany to his bride was a lace fan with sticks of gold, fish pearl inlaid with gold. These sticks tapered toward the point, and became paler in coloring. The inlaying was floral—Marguerites, daffodils and roses—and the design was repeated in the lace, where the rose petals were detached and fluttered with every movement of the fan. This is an illustration of the exceeding beauty of some of the most costly class of fans, which are of enormous size. Most of those not made of lace have borders supported by the sticks, which constitute a part and parcel of the fan itself, coming to the very edge of the lace.

The artistic feeling of the day, says the London *Queen*, is shown in the exquisite beauty of the painted fans. White and black satin fans, large in size, display the most admirable bunches of roses, flags, passion-flowers, lilies and hundreds of other flowers, all so true to nature in form and coloring that you feel you could pluck them. These have the lace bordering. Another favorite painted fan is in sepia, with charming Watteau-like scenes on cream, and equally beautiful are the black fans of gray and white, with figure subjects. Many of these black fans have an appliqué of lace laid on all round. Large fans, oval at the top, with the side ends shorter than those in the centre, composed entirely of smooth, shiny feathers, generally shaded, such as red and green, are new. They have mostly a silver ring slipped over them. Their great beauty is in the shading, especially in the gray tones. They are also to be had in plain colors, and they as often as not have a butterfly in green feathers settling on them. They are composed entirely of small pigeon feathers, and the sticks of many of them are inlaid with gold. Another class of the same sort of fan is made with tips of contrasting color, and some are spaced, such as brown, gray and gold, green, gray and black.

Another novelty is that in the centre of many of these feather ribs oblong pieces of ivory are let in. But with all these fans, the same half-crescent shape is preserved—short at the sides, long in the centre.

Circular fans of marabout, shaded and in plain colors, not collapsible, are costly and most fashionable. There is a cheaper fan of the same class made of feathers, with a claw handle and a beetle or a butterfly in metal resting on it.

Circular fans covered with lace or with flowers, real or imitation, are among the latest introductions, and really good additions to a dress.

There is a grotesque element, too, in fans. Very fashionable are large black satin fans, lined with old-gold or some other color, with a huge monkey or a parrot painted on it, the coloring carried down on the stick. Some cotton fans at low prices, in brown shades, with colored sticks, like cherry wood, have designs of Kate Greenaway figures in black outline; and a very large number of huge flowered cretonne fans are selling; indeed, during the season they will be made to match the cotton dresses.

Much of the old point-lace shaped for fans is now being remounted, and even among those handed down as old the sticks and the lace are of very different periods. The sticks of Louis XIV. period are the most valuable. No one can do wrong in wearing an antique fan of almost any period, whether it be of ancient silver filigree, or Oriental, or what not. There is a constant demand for these, especially for a very rare Venetian dagger fan, which is only portable as a fan, for it is a veritable stiletto incased in ivory, after the fashion of a fan, and doubtless of Oriental origin, for the Chinese have a dangerous dagger-fan, so disguised that no one would guess its use. This nation has one also like a bludgeon—of solid steel, handsomely ornamented, the blade resembles a Malay kris. With the Chinese, a fan would seem to be a necessary part of dress, therefore in Chinese fans there is a great choice. They have different ones in summer and winter, the commonest coolie carries one, and the passing news of the day is depicted on them.—*Boston Courier.*

Among the visiting members of the trade in the city during the past week were Mr. Gissel, of Wood & Gissel, Dubuque, Iowa; Charles Stewart, of Charles Stewart Paper Company, Cincinnati, Ohio; Mr. Barnes, of Barnes & Hipsley, Fort Dodge, Iowa; Henry Frank, Natchez, Miss.; M. L. Weisman, Marshall, Tex.; Mr. McPherson, of Woolworth & McPherson, St. Joseph, Mo.; J. W. Bond, of J. W. Bond & Co., Baltimore, Md.; W. F. Hartough, with E. J. Morgan, Leavenworth, Kan.; Alex. Ortlieb, of Alex. Ortlieb & Co., Dallas, Tex.; D. W. Glass, Baltimore, Md.; F. Boegle, San Francisco; Charles Blackburn, of George McDowell & Co., Philadelphia; A. & B. Walsh, of J. W. Brown, De Land, Fla., and Mr. Coffin, of Holman, Coffin & Co., Atlanta, Ga.

A JUG OF SOLID JASPER.

At the Hamilton sale in London there was sold a jug carved out of solid jasper. The stone is variegated with brilliant reds, greens and grays, dotted with tiny gold specks. It must have been highly appreciated in France, for about the year 1745 it was artistically mounted in gold by Meissonier, a famous jeweler of the reign of Louis XV., probably to hide the edges of the jasper, which had been chipped. At the British Museum there is a plateau or shallow basin which matches the ewer in every respect save that it is unmounted. This came from the collection of Sir William Hamilton (no relation to the duke) in 1772. The two articles were compared last week side by side. Mr. Wertheimer, who gave $11,500 for the jug, is of opinion that both were originally carved out of the same block. Possibly they formed a portion of the toilet service of some Byzantine noble.

The essence of true nobility is neglect of self. Let the thought of self pass in and the beauty of great actions is gone, like the bloom from the soiled flower.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, August 9, 1882.

THE MONEY MARKET.—There is still a very easy money market. The demand for commercial paper is very light, and the supply is liberal. Call loans on stocks ranged from 3 to 3½ per cent., and on U. S. bonds at 2½ to 2 per cent. Time loans were 3 to 6 per cent. The stock market is just now quite tame, a large number of the active operators being absent from the street. The tone of the market during most of the week has been, on the whole, weak, and most of the active stocks are lower, but the market closed strong. Governments are also dull, but prices are without essential change. Railroad mortgages are for the most part lower, in sympathy with the share list. The market for foreign exchange was quiet and barely steady for long-date bills, and rather active and firm for short-date and cable transfers. Commercial bills are in only moderate supply.

THE PAPER MARKET.—Considerable complaint continues to be expressed at the low state of the water at the mills, and a number of instances are reported of mills having to shut down for a portion of the day, while some on the smaller streams are unable to run at all This has a tendency to stiffen prices slightly on new contracts which are offering, particularly on print papers. Although news can still be bought at the prices which have ruled for some weeks past, there is a little better tone to the market, but we wish to be understood as only speaking comparatively and not to assume that the market is very firm. Quite a number of the straw-wrapping mills are shut down for repairs and on account of low water, the result of which is already being felt in a smaller supply coming on the market and more steadiness to prices. The manufacturers of straw wrappings meet at Albany on next Tuesday. Straw boards are very dull, and quoted prices are merely nominal, and believed to be cut quite generally by manufacturers and dealers.

THE STATIONERY MARKET.—Quite an active trade has been developed during the past week, and in the course of another sennight the height of fall business will probably be reached. Buyers continue to come in from all sections of the country, the South and the West having the largest representation. The fancy goods men make a greater display than ever in the various lines of goods which they handle. The competition in the fancy goods trade is very great, and buyers have the advantage of an unusually large selection in consequence. The outlook for an unprecedented good fall trade continues favorable, and dealers and buyers all wear cheerful countenances and speak of business in the most encouraging terms. Prices of staples have undergone no change.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention" Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U S. Minister, E. B. Washburne.*

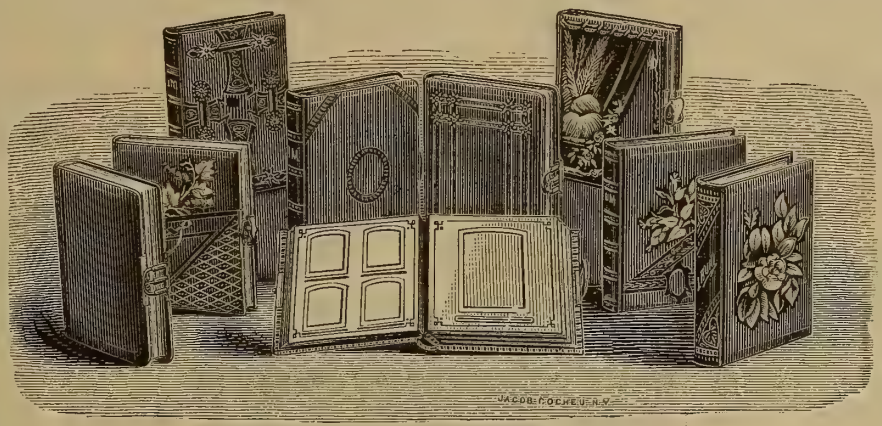
SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed - one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

THE GREAT ERIE RAILWAY,

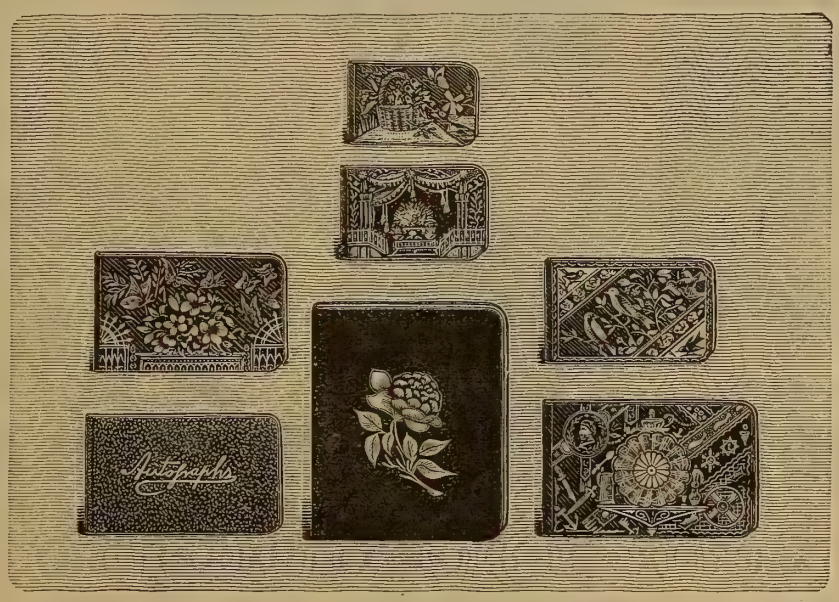
LANDSCAPE ROUTE



OF AMERICA.

E. S. BOWEN, General Supt., New York.

JNO N. ABBOTT, Gen. Passenger Agt., New York.



ALBUMS.

Herewith are given illustrations of some of Koch, Sons & Co.'s new designs in photograph and autograph albums. Their line has been increased by about one hundred and fifty entirely new designs, and each is worthy of recognition. This is the largest and choicest variety which the firm has ever offered. It includes all of the latest designs in the American and European markets. Those in plush are in different shades, while those in morocco and calf are elaborately finished. Among the handsomest of the new style of octavo photographs is one made of silk plush, with a very heavily embossed satin rose, gilt beveled insides, with wire clasp, to hold thirty-six pictures. Another of the new designs is of calf, octavo size, embossed in combined satin passion-flowers, violets and forget-me-nots, gilt rustic or beveled insides, to hold twenty-six pictures. Still another new style is of English morocco, embossed in gilt, silver and satin flowers, gilt wire clasp, to hold forty-four pictures. Of the latter there are three patterns.

PHOTOGRAPH ALBUMS.

The new line of autographs embraces the "Golden Butterfly" series, made of calf, flexible, ornamented with hand paintings, tinted paper, gilt edges and round corners. Another new line is in silk plush, crimson, old-gold, olive or navy-blue, padded and ornamented with flowers, assorted tinted paper, gilt edges and round corners. The line of autographs embraces designs sufficiently varied to meet the most exacting taste, and, altogether, is one of the most elegant to be seen in this country.

AUTOGRAPH ALBUMS.

:o:

TO CLEANSE A CHAMOIS SKIN.

It may be thought a small matter to trouble about the preservation of a piece of chamois leather; but many stationers could speak of much vexation and loss of time occasioned by a badly-kept wash-leather—not to mention the pecuniary loss where nickel and leather goods are scratched and injured by the particles of dust which will find their way just where they are least required. When a chamois skin gets into a dirty condition, rub plenty of soft soap into it, and allow it to soak for a couple of hours in a weak solution of soda and water. Then rub it until it appears quite clean. Now take a weak solution of warm water, soda and yellow soap, and rinse the leather in this liquor, afterward wringing it in a rough towel, and drying it as quickly as possible. Do not use water alone, as that would harden the leather and make it useless. When dry brush it well and pull it about; the result will be that the leather will become almost as soft as fine silk, and will be, to all intents and purposes, far superior to most new leathers.—*Paper and Print.*

METALLIC AFFINITY.

Metals have attractions and repulsions for each other and for certain rocks. Silver loves copper, and the coppered keel of a ship wins and weds silver from the sea. Silver loves lead. The natural matrix of lead is limestone. The source of all the carbonates of Colorado, Utah, and Nevada was dolomitic limestone. The lead was a sulphide. Leached from the limerock it was brought into fissures. It oxidized and passed into a sulphate. By interchange of acids with a carbonate of rock it became lead carbonate. The silver it had held took sulphur and became a sulphide, or chlorine and became a chloride, and was precipitated into the lead carbonate. The affinity of tellurium is with archæn granite, and telluride veins will be found in such granite, associated with a purplish quartz.

A label package in which one or more sheets of labels are arranged in columns, with intervening and surrounding blank spaces, and coated with an adhesive substance on their rear, and partially separated with a cutting or incising instrument, and mounted upon a suitable backing by adhesion of the blank portions, the labels proper being left unattached.

NOVELTIES IN DECORATION.

Gathered plush bands are pretty for looping back *portières* or window curtains. They are made on stout muslin foundations, and are narrow toward the ends. Both edges are gathered. Red is the most general, and the gathering makes it quite effective. Hand-screens are now covered with red plush, gathered toward the handle, and finished off with a plaiting and bow of ribbon. The fashionable handles vary from one-half to three-quarters of a yard in length, and the screen stands against the wall by the side of the fireplace. The new Japanese paper hand-screens, in different sizes, have these very long handles. Wood baskets are now placed in rooms, and are made ornamental. They are usually of brown wickerwork, and are long. They are lined with cretonne or fluted satin, and have a vandyked valance outside, headed by a satin ruche. Any short length of embroidered material, especially of Eastern appearance, is now used up for these baskets. Sometimes they are lined with chintze harmonizing with the furnishing of the room in which they are kept. Some people have a lid added, and use them as scrap or work baskets. Squares of work, originally intended for footstools or cushions, are now being let into the sides of these baskets. A strip of colored plush is often twisted round one side of a picture resting on an easel. Any fancy piece of effective material can also be arranged in the same way. Small mirrors can be decorated after this fashion. It is much the fashion to paint a wreath or spray of flowers in oils on these mirrors. A great many were to be seen about Christmas time as novel gifts. Glass stands for the dinner table, standing under little flower vases, are painted in the same way. Larger mirrors and also a front of an upright piano, the panels and doors of a cabinet are so decorated. An original way of ornamenting a wooden front of a piano is to paint a long peacock eye-feather leaning across, with the stalk toward the left corner. Across the stalk is painted a miniature hand-screen, with a monogram of the owner, or a spray of flowers. Small simulated hand-screens seem quite popular now, for some were recently seen on doilies, made of different colored satin, appliquéd on, with a tiny spray of flowers worked in the centre of each. The doilies were the ordinary white ones, and the frames and handles of the fans were worked in silks. Each fan was in the centre, in a slanting position. This is quite a novelty in doilies, and not at all difficult to carry out. The centre of a dinner table is now frequently covered with a good-

sized plush mat, with a fancy border and tasseled edges. Only light ornaments are placed upon it. This has quite superseded the strip of plush or satin. If the table is long to accommodate a large number of persons, some square mats, to match, are laid at the corners, with a glass of flowers on them.—*Andrew's Queen.*

J. R. Hope, of Hope & Co., fancy card importers and jobbers, West Point, near Philadelphia, met with an accident to his elbow a few weeks ago, while traveling by the cars between Norristown and Philadelphia. His arm, while projecting only three or four inches from the window, struck against the wall of a cutting through which the train passed. Fortunately no bones were broken, but he was incapacitated for business for one week. The Reading Railroad Company paid him $200 as compensation for the estimated value of his lost time by the compulsory abstention from traveling for one week.

MAPLE FOR CABINET-WORK.

Almost every one knows something about maples, but very few, even of experienced cabinet-makers and carpenters, ever think of these woods as being available for anything but firewood, or, perhaps, for the making of some delicate box where white holly is not available. The white maple (*Acer rubrum*) is one of the whitest woods growing in this country, only exceeded in that respect by one or two. It is, however, on account of its extreme softness and general lack of strength, practically valueless. The sugar maple (*Acer saccharinum*) is one of the most useful trees we have. While it is very cheap in our markets, we cannot consider that it is a valueless tree, this low price of the timber resulting from the fact that it is not fashionable, and has not been used to any extent for anything save mill work and rough carpentry. Its grain is very fine, and in hardness and general adaptability for fine carving and cabinet-work stands next to box-wood. Beech somewhat exceeds it in the fineness of grain, but is not nearly so beautiful. The great strength of maple renders it valuable in all kinds of delicate work, preventing it from being readily broken, and, at the same time, allowing a slenderness of construction quite inconsistent with any weaker material. Almost all maple has in its structure a certain waviness which causes it, when polished, to reflect light and to appear almost dapple. Other varieties are the well-known bird's-eye maple, which, thirty or forty years ago, was a very popular wood for certain kinds of cabinet-work. Many persons suppose that the bird's-eye maple is a separate or peculiar tree, differing from other maples. This is a mistake. Most of the rock-maples have a tendency to form little hillocks beneath the bark, and each layer of wood during growth is evenly covered over with these projections, which do not grow larger, but retain their original size. The result of this is, that when a slice is taken through one of these little lumps or pits, we find that the grain of the wood is bent up or down in a circle, and, of course, reflects the light differently from that part which is horizontal. In what are called bird's-eye maple trees, these little hillocks or pits in the bark are disposed closely together and regularly throughout the tree. In opening such a tree, when the cut is parallel to the bark, we have a board showing the bird's-eye maple markings. If, however, the cut is made radially, it passes through the hillocks vertically, and, as they extend from the heart to the bark of the tree, we have something which produces upon the wood the effect of a wave. When a log is sawn so as to show the eyes, it is known as bird's-eye maple; and when cut radially, so as to make the waves most prominent, it is called waved maple, or, in some places, curly maple. The wave pattern will almost always be found in any bird's-eye board by looking at the edge, and *vice versa*. Maple has one advantage which has been improved very little by cabinet-makers, and that is its susceptibility to staining processes. The wood is capable not only of being ebonized, but of taking several very beautiful colors. We have seen bird's-eye maple for small work stained to a very beautiful drab, which harmonizes well with both furniture and decorations. The supply of this wood is abundant, and, fortunately, can be obtained in large size. Hitherto its principal value has been for fire wood.—*Furniture Gazette.*

THE NEW "MONON" LINE.

For a number of years past the Louisville, New Albany and Chicago Railway has enjoyed an enviable reputation, all its own, among the traveling public, and has been one of the most active competitors for Southern traffic. One difficulty, however, stood in its way and combated with its general popularity. Its northern terminus was Michigan City, and thence it was compelled to enter Chicago around the bottom of the lake, over the tracks of the Michigan Central. Thus it found itself partially at the mercy of a competing line.

Early during the present year, however, it began to be rumored among railroad men that this road had in contemplation some radical and startling changes, among which were an "air-line" to Indianapolis, and thence over the C. H. and I. to Cincinnati, and a short line—also its own—from Chicago to Louisville. About April 1 the meaning of these rumors began to be apparent, and now two solid through trains are run each way daily between Louisville and Chicago, the night trains carrying the latest pattern of Pullman sleepers. As now arranged, the trains start from and arrive at the Twelfth and State streets depot, entering the city—with the W., St. L. and P., G. T., C. and E. I. and other roads—over the Western Indiana franchise, and continuing thereon as far as Dalton, where they take the Pan-Handle tracks to "Air-Line Junction," eight miles distant, over the "air line" to Monon, where junction is made with the old main line to Michigan City. This air line, formerly an unfinished, narrow-gauge road, intended to run from Lowell to Delphi, has been bought by the L. N. A. C. Company, and graded into one of the finest broad-gauge stretches in the West.

At present, work is being very rapidly pushed from Air Line Junction, in a straight-away course to Chicago, which will allow a gain of some two hours on the present time-card, and will insure greater regularity of trains, while the other end from Delphi will, in a few weeks, enter Indianapolis, thus giving a true air line between Chicago, Indianapolis and Cincinnati.

From appearances, everything will be done in the most thorough manner. The roadbed is all stone ballasted and furnished with Bessemer steel rails, hard-wood ties and sleepers, &c., and the equipments, both as regards locomotives and coaches, are in the latest and most approved style, with every possible regard for the personal comfort of passengers.

Quite rapid time is made by all trains, and the road to Lafayette, Louisville and other points on the road has been considerably shortened already, and will be still further reduced after the completion of the new Chicago extension. The time to Indianapolis will be shortened some hours over this new line. This latter enterprise should be appreciated by the traveling as well as the shipping public, as it will tend to weaken the grip which the Cincinnati pool has at present on Chicago and Cincinnati business.

The officers of the road are energetic, ambitious and experienced railroad men, and seem determined to make their line "*aut Cæsar, aut nullus!*" Sidney B. Jones, general traveling passenger agent, now in charge at the Chicago end of the road, is one of the most popular in the West, and the general passenger agent, Murray Keller, lends to the company an experience which would be valuable anywhere. The Chicago office of the road is located at 122 Randolph street.

It may be added for the information of the curious that the term "Monon" was only chosen as a trade-mark of the line, in conformity with the usage which gives us the "Kankakee" line, the "Kokomo" line, &c. The town of Monon is one of the oldest post-office stations in the State of Indiana, and the title is Indian, meaning "swift and sure," a good motto for a modern railway!

BRASS FACING.

Although brass was first deposited by M. de Ruolz as far back as 1841 from the cyanides of copper and zinc dissolved in cyanide of potassium, its practice until recently has been attended with many difficulties and failures. Even at the present time the process is practised only to a limited extent, and it is not necessary therefore to devote much space to the *modus operandi*. Indeed, brass is rarely, if ever, used for facing for printing purposes. Its deposition requires more time, and is somewhat more expensive than that of copper, while it cannot be said to possess any distinctive advantage, except, perhaps, in the case of printing with colored inks. It is almost impossible to print from a copper surface in red, as the mercury in the vermilion really forms an amalgam with the metal.

Brass surface is, however, largely used for bookbinders' blocking tools and stamps, as it is harder than copper and less liable to oxidize from the heat applied in the process.

It will be readily understood that it is a much more difficult matter to deposit an alloy of two metals than one of pure metal, and this difficulty is considerably increased in the case of brass, as the zinc and copper of which it is composed are, to a great extent, antagonistic under certain electrical conditions.

When zinc is deposited upon copper by dipping it into a hot solution of bitartrate of potassium containing zinc amalgam, the plate is superficially covered with brass, or "brass-faced," by the union of the zinc and the copper. But the yellow color it assumes at first would quickly disappear, as the zinc would be deposited on the surface, and unable to unite with the copper after the first coating. In fact, prior to the really successful deposition of the alloy, articles were "brassed" by alternate coatings of zinc and copper, a slow and not altogether satisfactory process.

It is impossible to cover a wax or gutta-percha mold with brass, as the cyanide solution used would immediately destroy it. When it is desired to form a brass face, it is necessary to first produce a copper shell in the ordinary manner. The shell must then be backed, straightened, &c., and the brass deposited on the surface of the copper.

Several cells of the Bunsen battery are employed, as in the case of steel-facing. In some electrotyping establishments steel and brass facing are carried on in the same room, the connections from the batteries being attached to the trough containing either solution as required.

As it is necessary that in most cases the depositing solution should be at a high temperature when in work, a series of gas jets should be arranged under the trough, that the required heat may be obtained at any time.

Watt gives the two following solutions:

I. Cyanide of potassium	1 lb.
Carbonate of ammonia	1 lb.
Cyanide of copper	2 oz.
Cyanide of zinc	1 oz.

The whole to be dissolved in one gallon of water.

II. Cyanide of potassium	1 lb.
Carbonate of ammonia	1 lb.

Dissolved in one gallon of water.

A large brass anode must be attached to the positive wire of the battery. In the latter case the solution is sup plied by the decomposition of the anode.

The solution in both the above should be 150° Fahr.

Wood's solution:

Cyanide of potassium	1 lb. (16 oz.)
Cyanide of copper	2 oz.
Cyanide of zinc	1 oz.

Dissolve above in 1 gallon of water, with the addition of 2 oz. sal-ammonia. Solution to be used at 160° Fahr.

The following is Roseleur's solution, which may be worked cold:

Water	200 parts.
Cupric sulphate	15 parts.
Sulphate of zinc	15 parts.

After the above is well mixed, add 40 parts of carbonate of sodium previously dissolved in 100 of water. When the precipitate has subsided, throw away the clear liquid, and wash the sediment by addition of water, followed by subsidence and decantation. To the drained precipitate add 900 parts of water in which has been dissolved 20 of bisulphate and 20 of carbonate of sodium. Then dissolve 20 parts of cyanide of potassium and 2-10ths of a part of arsenious acid (white arsenic) in 100 of water, and mix with solution previously made. The addition of the arsenic causes a bright deposit, and if in too great proportion, whitens it. If the action of the solution is too slow, add copper and zinc salts, or perhaps cyanide. Both salts of copper and salts of zinc must be occasionally added, as the brass is deposited much faster than it dissolves.

As in the case of steel, unless there is a continual supply of brass facing to be done, the trouble and expense involved in the process is not justified, especially when it can be speedily and cheaply done by electrotypers, who lay themselves out for this particular branch.—*Printing Times and Lithographer.*

HOT VARNISH.

The information may not be entirely new, yet some people may not be aware of the fact that copal varnish, when heated almost to a boiling point and applied with a brush, gives a heavier coat and more gloss than when used in the common way. All varnishers know that varnish contracts in cold and expands in warm weather. By the heating process the varnish becomes thin and requires no turpentine, which all finishers know "takes the gloss off." Care should be taken, however, to spread the varnish evenly and not too heavy, as in cooling it contracts, and is apt to "crawl." Especially must this be observed in finishing upright or inclined surfaces, as great care must be taken to prevent running. When the surface can be worked in a horizontal position, the varnish can be "flowed" heavier without danger. It should be kept as near the same temperature while using as possible.

DALTON, MASS., U. S. A.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**

Each sheet is water-marked with name and date.

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. XII.---NO. 7. NEW YORK, AUGUST 17, 1882. WHOLE NO. 373.

Correspondence.

ST. JOSEPH NOTES.

[CORRESPONDENCE OF THE STATIONER.]

ST. JOSEPH, MO., August 7, 1882.

This part of Missouri does not seem to be represented in your "Correspondence," and, if I manage to write anything of interest, perhaps you will publish it, so that your Eastern readers will know that we use stationery.

It is hardly necessary to say that trade has been dull during the spring and summer. We have had our share of doing nothing, but expect a "boom" this fall, for crops are splendid, and at the general round-up on January 1, every empty pocket expects to have its silver-lining.

The leading representatives of the trade here are Ernst & Brill, who, having an elegant store in the Opera House block, and managing a large news-stand, are coming out in the wholesale line, and Woolworth & McPherson, who carry a heavy stock of wrapping paper and printer's stock, besides their general line of books and stationery.

St. Joseph claims for her territory Northwest Missouri, Kansas and Nebraska, and the boys drum it in splendid shape.

There is a paper mill at Blue Rapids, Kansas, that supplies one or two leading grocers here with their straw paper and turns out a nice line of manilla and white print. Why there are not more mills of this kind here it is hard to understand; there is water-power at a good many places; fuel, where water-power is not, in the shape of inexhaustible coal-beds all around, and straw at no price at all, and if this industry is only taken at the flood 'twill lead on to fortune without a doubt. MISSOURI MUSER.

LOUISVILLE LOITERINGS.

[FROM OUR REGULAR CORRESPONDENT.]

LOUISVILLE, KY., August 12, 1882.

After almost daily showers for several weeks the weather has settled down clear and cool. Retail trade in most all departments has been light, as it always is at this season; and, besides, with the male population engrossed in base-ball, boat races, lacrosse and elections, and the weaker sex given over to amateur theatricals and summer resorts, the shopkeeper's lot has indeed not been happy or profitable this summer.

Jobbers have for some weeks been making brisk preparations for a splendid season's business, which is now distinctly assured for the fall months. Kentucky and the entire South have made excellent crops; consumers are in need of goods, and now have the resources wherewith to buy what they need.

At a meeting of business men at the Board of Trade, it was decided to arrange a big celebration of the recent completion and extension of new railroads entering our city. A monster industrial parade will be held on September 12, under the joint auspices of the Louisville Fair Association, the Board of Trade and the Louisville Exposition. It is proposed to run excursion trains from all tributary States and to throw open the attractions of the city free to the visitors.

Louisville has exhibited more energy in the past two years than in any previous ten, and the growth of her commerce in variety and extent attests the new life that has been infused into her commercial body.

The first directory of Louisville was published in 1832, when the population was 15,000 (guarded by six policemen). In 1860 the census showed a population of 68,033. The census of 1880 put the figures up to 123,645, and since that date the development has been so rapid that good authorities now claim 150,000. The increase of manufactories has been notable; there are now 1,500 establishments of this class here.

Known everywhere as the leading tobacco and whisky mart of the globe, and famous in every part of the Union for her sole leather, plows, furniture, jeans, and several other specialties, Louisville bids fair with her enlarged transportation facilities, in connection with the prosperous condition of her trade fields, to become the Chicago of the South.

W. Scott Glore, after a successful career of twenty-five years, has sold out his book and stationery house to Charles T. Dearing, of this city, and Theodore Curry, late of Harrodsburg, Ky., who will continue as Curry & Dearing. Mr. Dearing is an old and esteemed member of the trade here. Besides his new purchase, he will continue his old establishment on the corner of Third and Jefferson streets. Col. Joseph E. Kiffin, a popular veteran in the business, who has handled as much stationery as anybody in this section, will remain with the new firm.

Lamphear & Co., stencil manufacturers and printers, have been put into the hands of a receiver, and will shortly be closed out at marshall's sale.

The cigar and news stands of E. Peynado & Co., at the Galt House and Louisville Hotel, have been bought by V. S. Wright, heretofore manager of the business for his predecessors.

Wm. T. Ross, for many years cashier at the Bremaker Moore Paper Company, has resigned to become a partner in the wholesale liquor house of Williams, Ross & Co.

The *Courier-Journal*, a few days ago, gave a sketch of Louisville's famous newsboy, Pat Murphy, who for nineteen years has been constantly "on the go and the shout." Some years ago Pat lost $9,500 by a bank failure. He is as charitable as he is plain and industrious. During the flood last winter, for instance, he gave $50 to a relief fund on condition that his name should be left out of the papers. Doubtless he has been seen and is remembered by every person who has visited the city.

John E. Simon, the "printer" candidate for City Clerk, was defeated, though polling a respectable vote. His successful rival is the inventor of a device in the shape of an advertising card, for which he is offered $3,000.

In closing, I am reminded that Col. Joe Kiffin, while rusticating at French Lick Springs last month, was asked by the ladies there to write a "watering-place letter" to one of the city papers. He did as requested; submitted the letter to the ladies, and, being approved, slyly added the following verse and mailed it:

"If you're anxious for a shine
In the correspondent's line
And circulate the ink with favor rare,
You must gather all the germs
Of a thousand lovely terms,
Es-*pec*-ially when speaking of the fair."

Being unfamiliar with any of these germs myself, I may truly sign as a BOURBON.

KANSAS CITY KALEIDOSCOPICS.

[FROM OUR OWN CORRESPONDENT.]

KANSAS CITY, MO., August 10, 1882.

Having just returned from a short trip in neighboring towns, I can inform you that things never looked better for a "booming" fall trade in Kansas City and district.

We are on the eve of a bountiful harvest, and it seems as if this, of all years, is to be most opportune in the history of the West. I cannot say that withal there is any spirit to buy among the tradesmen. Everybody seems to be a little overstocked from spring, or is waiting to see the fall trade begin. Many are also East. Yet it can be plainly seen that a big trade is imminent.

Building has taken a rapid movement, owing to the fall in the prices of brick, and many Eastern capitalists are investing their money in this mid-continental town.

Peter H. Tiernan has just completed the most perfect bookbinding and printing establishment in the West, and displays a very tasty circular to purchasers in this part asking an inspection of his new house.

It is surprising to see the competition there is existing among stationers in the purchase of Christmas and New Year stock, most of which

is already bought. What with this and the enthusiasm shown by our public-spirited citizens over their coming exposition, which is to surpass all former efforts, it bids fair that Kansas City shall make her account on the New York ledger equal if not superior ere long to that of St. Louis.

H. A. W.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., August 14, 1882.

The number of entries for Cincinnati industrial expositions at a given time of the year have in the past proven an unfailing indication of the relative prospects of the coming exposition for that year. By this token the Exposition of 1882 will be one of the greatest of the series. Everything now betokens such a consummation. The crops of wheat in Ohio and the adjacent States contiguous to Cincinnati, are double the average. Another circumstance is the fewness of excursion parties from the country to Cincinnati during the past spring and summer. They have been kept away through fear of small-pox. That disease has ceased as an epidemic, and has almost entirely disappeared from the city. Over and above all these circumstances, the number of entries for any previous exposition this year at this time were never so great as for the coming one. The attendance and the financial success of every exposition in the past have corresponded with the number of entries for it.

But, perhaps, some one asks what expositions have to do with the paper trade? Somebody is always asking such questions. "Prince William" enjoys exciting curiosity and then satisfying it, so he will try to explain. In the first place, Cincinnati Expositions are great consumers of paper. They make appreciable inroads upon stores and stocks of that article, directly and indirectly. In the first place, the Exposition Commissioners advertise luminously by cards printed in colors and by documents sent through the mail, which are marvels of typographic art; and, in the second place, exhibitors follow their example. One can scarcely conceive of a better field for an inventive printer of advertising cards and pamphlets than one of our Cincinnati expositions. These are the visible relations of our expositions to the paper and stationery trades. As exhibitors, the stationery trade, and, indeed, the paper trade, have never figured conspicuously at Cincinnati. It would be hard to assign the true reason for this. There have been exhibits of printing and rows on the part of competitors about the awards, but not recently. In fact, the premium list on stationery and paper trade articles should be submitted to a committee of business men and manufacturers covering the range of the trade, with a request that they suggest a list of premiums. The present one is very imperfect, and is far from being up to the times. At one of the expositions the manufacture of envelopes was exhibited, and it proved an exceedingly attractive feature, as did also an exhibition of lithographic printing. A wire-binding machine, exhibited in operation three years ago, proved a strong attraction.

The usual display, however, is of ledgers in cases, and a few solitary cases of stationery "still life," which observers pass with a glance. John Holland will make a display this year radiant with gold and substantial and solid with iridium. There is a fine prospect for a sight of the glories of the electric light, but this has no relation to the stationery trade other than facilitating the examination of color printing at night, so Prince William will "pass" it.

W. B. Carpenter & Co. express supreme satisfaction with the state of the trade, considering that the month is August.

John Woods, of the firm of Chatfield & Woods, says trade is "quiet." Well, what better could you expect in August? Isn't that always a very quiet month? Try to get a concession from him on ever so big an order and you'll get some idea of what he means by this quietude in trade.

Louis Snider's Sons talk "quiet," too, but they don't keep quiet.

Charles Stewart can find no quiet in his acre or so of floor-room in Cincinnati; no rest (for the wicked) here, so he has gone to another part of the world in quest of it. He may be found about the time this gets into print sniffing seabreezes, no one dare say where, on the coast of the Atlantic.

Nobody seems to leave the establishment of Robert Clarke & Co., that universal book shop and printing house, importing house, and—well, I can't undertake to catalogue its range of business, but it's a big, showy, busy sort of universal house on the south side of Fourth street between Vine and Walnut streets, and is always full all day of busy salesmen waiting on customers, and seems crowded with clerks and bookkeepers, all as busy as if they were propelled by machinery and couldn't help working. This is the visible force which the purchaser of a quiver of arrows or of a lawn tennis outfit may see. Those privileged to go up higher will see the same scene of activity, though in other directions, on the second, third, fourth and fifth story floors. Perhaps these people do take vacations occasionally, but there are so many of them that one would have to call the roll occasionally to decide the question. Busy as everyone seems no customer is ever kept waiting for attention. That is one of the mysteries of that house and one of the secrets of its success.

Wilstach, Baldwin & Co. have been touched with the spray of the tidal wave which will be here in September. J. R. Mills & Co. have felt the dash of its foam. W. H. Pounsford & Co. are listening with pleasure to the rustling of its waters. W. B. Carpenter & Co., accoutred as they are, envelope factory and all, stand prepared to leap in, and take the full benefit of an early bath. Mallory and Weble, Woodroue, Bradley, Thomson Stevens, are equipped for its approach, and they all know it will be here presently.

Howard Hinkle, of Van Antwerp, Bragg & Co., is on the seashore hearing what the wild waves are saying. His blank-book enterprise is engaging his attention and inspiring his zeal, and he cannot remain long away from it.

Barton, in his art work in the Arcade, is kept busy as a bee. His business would be impossible in a city less devoted to art than Cincinnati. But here, that devotion is a sacred fire, whose flames fed with fuel brought by many votaries, are not likely to clay, and so Barton lives and thrives. Early in September the School of Design will open here, and then Barton will hear the plash of the tidal wave, and so will Hoffman, and so, too, will Closson. Barton supplies the home art demand almost exclusively. Hoffman keeps a wide range of articles, and is ready to answer calls of the trade. Closson manufactures articles in use in industrial art, and answers calls for materials for the fine arts.

"Fairly good," was the answer. The question was, "How are collections?" I asked it and one of the luminaries of the trade answered it.

"How are sales?" asked the same inquisitor. "Mine not so good as last July," was the cool reply. "Say that again," remarked the questioner with a skeptical twinkle of his eye. "Well, fact is last July I made some exceptionally big sales," was the reply. "Guessed as much," rejoined the querist, shrugging his shoulders. "Any boom in school stationery?" continued the committee of investigation. "We don't sell school-books; we always have a steady good trade in school notions and stationery." This latter reply was made with *sang froid*. I remembered how this same dealer gloried over his big sales of school notions just two years ago, and I was diagnosing him (trying to find out what ailed him) to see if he had the same complaint this season. By the way, the sale of school notions and stationery increases yearly in Cincinnati by a rate of increment that astonishes all who have any experience with it. Either the people hereabouts are taking to "larnin" amazingly, or the number of school children is increasing at an alarming rate.

In an excursion on Fourth street, seeking for news, I happened in at a famous book shop. "Any special sales of books?" was the first question popped squarely, without preface. The eyes of the respondent gleamed as he answered, "We have just sold a $1,700 library." "For an individual?" "No, it's an addition to a college library." "That reminds me of another question," I remarked, and continued, "Do you get large orders often from individuals for their home libraries — oftener than heretofore?" "Well" (hesitating and pondering), "well, I think yes." That answer was a little too noncommittal, sort of negative-like, and besides wasn't as newsy as might be desired; so I pressed my queries all the more eagerly—somewhat thus: "Isn't there something new in the way of library enterprises in this part of the world which comes to your notice in the way of trade?" (Private to the reader. The tone of voice and manner in asking this question if put in words would be, "You don't mean to say you've let your business drop into a rut, old fellow?") The answer was good. Here it is. "Certainly—the neighborhood libraries—there is one in Mount Auburn, there's one down in the busy city, and two in Walnut Hills. You see, the neighbors band together, have an understanding to buy new books, always arranging that duplicate purchases of the same book shall not be made, and then each purchase goes around till each member of the club has read it." "Aha! and is that method contagious?" asked the prince, deeply interested. "Of course it is. There's a club at Hamilton and many other places, and the number of clubs or associations of this sort are increasing." "I knew of the Mount Auburn Club years ago," I observed; "but that the plan is growing into use elsewhere is news to me. Who originated it? Who was its inventor?" "Why didn't you ever see our printed directions for forming such libraries? Here they are;" and as he spoke he handed me a catalogue of about three hundred pages—the catalogue of the house (it was at Robert Clarke & Co.'s). There, sure enough, were the rules for forming neighborhood loan library associations, bound in with the catalogue. "We once printed these rules in a separate pamphlet," said the informant, "and the New York *Tribune* copied them bodily and never gave us credit." This remark was made with a tone of voice and manner which might be equivalent to saying, "That was a sneaking trick which a high-toned journal ought to be above doing."

"Who's been here since I've been gone?" I asked of the Cincinnati stationery dealer and manufacturer who knows everybody (his name is always in THE STATIONER, and it would be

superfluous to repeat it here). This is the answer he rolled out volubly: "Mr. Brown, of Kiggins, Tooker & Co., New York; W. L. Monks, of Dixon Pencil Company, New York; C. M. Ward, Springfield Printing Company, Springfield, Mass.; E. J. Gumpert, of Marcus Ward & Co., N. Y.; H. Y.——" At this point he was interrupted by a customer, who came in with the proof of a ponderous catalogue, with pictures of guns and munitions of war in it. This put a stop to further remark, and a sudden departure was in order. This explains why there are not the names of two hundred and fifty trade visitors in this letter. In fact, it is a riddle how it happens that the trade visit Cincinnati so much through their commercial travelers. Does the superior quality of Cincinnati beer explain it? or the delights of the hill-top resorts, or the salubrity of the air, or the consumption of the smoke? The conundrum was given up in despair long ago by

PRINCE WILLIAM.

OUR LONDON LETTER.

[FROM OUR REGULAR CORRESPONDENT.]

5 LUDGATE CIRCUS BUILDINGS,
LONDON, E. C., July 29, 1882.

Everything is so quiet here that I can scarcely find anything to say to you, even at such long intervals of writing. The stationery and fancy trades seem to be particularly dull just now, and what with holidays, stock-taking, &c., I can find very little going on. The large houses are busy with their Christmas goods and seeking orders for cards, &c. From all I can hear this year's trade will be tolerably heavy, but several stationery houses have expressed to me that the Christmas card trade is becoming a nuisance. I wonder they don't give it up altogether; because, what business is done now by stationers, has to be done so fine that it is not worth doing at all, and, moreover, competition by alien trades is so strong, that, practically speaking, this branch of the stationery trade has not only departed from its original quarters, but threatens to become an entirely independent business altogether. Fine-art publishers are getting cut out now, simply because large drapery and other similar houses are doing their own Christmas cards, employing some large printing firm to work quite independently of the patterns or designs of other card-producing houses. This is what, of course, it eventually will come to, and Christmas cards will gradually fade out. When goods, that were originally intended to be worth buying for their intrinsic worth, become "presents" to customers who buy a handkerchief, necktie or a pound of sausages, it is time to say farewell.

During the past two months a great many of your houses have been represented here by travelers and tourists. I never remember so many being here at the same time. Only yesterday I actually introduced two large New York firms to each other in my office. They had both heard of one another and knew each other's goods, but the actual personal acquaintance was fated to take place in THE STATIONER'S London office. So far, I don't think that your visitors have done our trade much good so far as buying is concerned. In fact one or two came here to sell goods. Last Wednesday the Hon. Byron Weston and his son arrived safely and are doing the sights. I hope to take Mr. Weston to Maidstone on Monday, to see paper made by hand and to have a look round a mile or two. He then goes on to Scotland and the Continent.

Mr. Evans, of Evans & Gardiner, sails on Tuesday and will arrive, all being well, two days after this letter. He has had a pleasant trip. I expect our chief and party from Switzerland in two or three weeks' time, when we go to Scotland together. Most of the tourists are now on the Continent, the London season having finished. Mr. Miller, of Montreal, is also here, and I hear that several others are en route.

Novelties are few. I have seen some of the Artistic Stationery Company's calendars for 1883. They are very nice, especially the steel-plates. Willy Wallach will be able to show them to you.

Marcus Ward & Co. will this year sustain their well-deserved reputation for good things in mediæval cards, and those embellished with quaint old-fashioned children. A new series of designs of various domestic animals, by S. T. Dadd, will be great favorites and must not be overlooked in laying in stock. Ever determined to offer their customers something quite special, Marcus Ward & Co. have obtained permission from the Laureate to print certain of his verses on the backs of a series of four very beautiful cards, which, no doubt, will greatly please the admirers of Tennyson. This is the first time the great poet has granted his permission for such a thing. Some dainty little leather bags for ladies, just large enough for the *mouchoir* and *porte-monnaie*, and decorated on the side by a little figure of the Kate Greenaway *genus*, introduced by this firm, are very pretty, and the effect given by using real silk and satin for the dress is both novel and effective. A new thing in folio writing-cases, called the "Ready-to-Hand," possesses the advantage of the ordinary blotting case, and by a cunningly-devised appliance, it presents the slope of a writing-desk. A number of leather pockets render it a most compact traveling case.

Marlborough, Gould & Co., 52 Old Bailey, have now issued their price list of Christmas cards for 1882–83. The prices begin at the low figure of ½d. and embrace almost every variety of subject. The "Confessions" by this firm is an interesting and attractive little novelty. It is an album to record the opinions, thoughts, feelings, ideas, &c., of friends. Having filled the album, young people will find its perusal a source of pleasure and delight. The "Comical Slate Calendar" is the name of a new purse calendar which they have introduced. It has the advantage of being useful as well as pretty. Their terra-cotta, or "terra-cottine," are cards for painting, and sell, small size, at 2s. per dozen, large size, 2s. 3d. They are delicate, and attract the eye by the softness of the color and the excellence of the finish.

Eyre & Spottiswoode have introduced the greatest novelty of the season in the shape of Christmas and birthday cards, if the term "cards" for such an article is not a misnomer. Taking advantage of the present *furore* for china and china paintings, they have introduced quite an *article de luxe*—cards made of fine Derby porcelain, hand-painted in various beautiful designs in the best style, with the colors and gilding fired or burnt in. They are mounted in plush and velvet frames to protect them from liability of fracture and enable them to be hung against the wall or securely placed on table or cabinet. They are of three sizes and vary in price from 2s. 6d. to 2½ guineas each, according to the paintings upon them. These prices will, of course, preclude their becoming very general or popular, but there can be no doubt as to the imperishable nature of the material.

Cassell, Petter & Galpin have issued the first part of "the cheapest complete Shakespeare ever published." It is called the Leopold Shakespeare, and will be published in monthly parts at sixpence per part, and when completed, will consist of 1,550 small quarto pages, embellished with 400 characteristic illustrations.

John Morley will secede from the editorship of the *Fortnightly Review* in November next. T. H. Escott has been offered and accepted the appointment.

The *Evening News* will shortly appear as a morning paper with an evening issue.

Letts, Son & Co. have published a new map for bicyclists called "London and Fifty Miles Round."

A new monthly, with the title of the *Actor*, has just seen the light.

Capel Court is the title of a new monthly journal in the interest of stock-jobbers and speculators.

A weekly paper, called the *Tricyclist*, for pastime and trade, has been started.

Sampson Low & Co. have published an amusing skit on city matters, called "The Monster Municipality; or, Gog and Magog Reformed."

The *Daily Telegraph*, in opening its new offices, has followed the example set by some other dailies, and opened a postal reply department for the use of advertisers.

James Blackwood & Co. have printed 50,000 of their sixpenny edition of "Verdant Green," and already sold about two-thirds. They will not be reprinted.

W. F. C.

CHICAGO CHAT.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS,
8 Lakeside Building,
CHICAGO, August 12, 1882.

It is not dead, but sleeping—alluding to the Western stationery trade. So with Chicago, so with St. Louis, Cincinnati, Detroit and the Northwest—they are not dead, but sleeping.

About the only present news from this point is that the Chicago Picture Company is preparing for a vigorous pushing of its goods. The latest departure in the comic card line is a set of five from this company, entitled "I'm the Bride," which are indescribable, but rich.

The Cleveland Paper Company sends in something very neat and novel in the shape of Japanese paper tea bags. These are simply bags of various sizes, made of the same material, as the well-known and widely-used paper napkins, and covered with the familiar curious and unique styles of Japanese ornamentation. They ought to sell for more purposes than that of holding tea. What better could be devised for confectionery, fruits, &c.?

"Charley" Crutsinger, of St. Louis, reports the roller business "duller than a Dutch immigrant;" so the genial Charles has stowed away some gay but deceitful flies, a few martyr-minded angle worms, and a treacherous reed from the swamps of St. Louis, and hied him to the rural retreats of his native Osage County, which he promises to rid of pickerel and bass before he again welcomes to his breast the lime-dust of St. Louis.

The Western Wrapping Paper Manufacturers met in adjourned convention at the Tremont House on Thursday last. The interest was well represented, and business of probably great importance to the trade transpired. Those concerned will find a full report of the meeting, with certain other information, in the *Paper Trade Journal* of August 12.

Further, there is nothing of interest in the budget of

G. B. H.

FORMATION OF CRYSTALS.

Most of the metals assume, under certain conditions, a crystalline form, and those particularly which are found native occur frequently as crystals. Among the metals, bismuth is remarkable for its tendency to crystallize, and by following the directions given, a crystalline mass of bismuth is readily obtained. Take about a quarter of a pound of the commercial metal, and melt it either in a small, clean iron ladle, or over a Bunsen lamp in a porcelain crucible; when quite melted, set the ladle or crucible on a cold metal surface. Let it remain perfectly still, and watch the bismuth carefully, until it is seen to solidify round the edges; then quickly pour out the metal still remaining liquid, and you have the whole of the interior lined with more or less perfect cubical crystals of bismuth. There is one striking peculiarity about these crystals, however. They are but skeleton crystals; the lines forming the edges of the cubes are there, but there is a depression in each face of the crystal evidently not as yet filled up. The growth of the crystal was arrested by pouring out the still liquid metal; and there we have not only shown us the shape of bismuth crystals, but also the manner in which the crystal grows.

For purposes of comparison, try now to make sulphur crystals. To do this, melt down roll sulphur in the ladle or crucible, using, however, a very gentle heat, and not prolonging it beyond the point at which the whole of the sulphur is melted; allow to cool in the same manner as with bismuth; wait until a crust has formed over the surface, and then immediately bore two holes through with a red-hot wire, the one for the liquid sulphur to run out and the other to admit air. Pour out the sulphur still remaining liquid, and cut carefully round the upper crust with a penknife. Remove it, and the whole of the interior is interlaced with delicate needle-shaped, amber-like crystals of sulphur. Here, then, are two substances, of widely different appearance and properties, both possessing in common this property of crystalizing, but with each there is a definite shape. Further experiment and observation teach us that the form of a crystal is as characteristic of a body as any other property it possesses.—*Mining Press.*

ORIGIN OF INDIAN ALPHABETS.

The numerous alphabets that have been used, or are now in use, in India can all be traced back to two, which may be termed the North and South Açoka alphabets. The first, of undoubted Phœnician origin, has disappeared, without leaving any successors or developments. To the second can be traced all the alphabets now in use in India, and some in use in other parts of the East. The origin of this alphabet has never been clearly settled, though several hypotheses have been put forward. It is impossible to trace these alphabets farther back than about 250 B. C., or to put their introduction into India earlier than about 300 B. C. A third distinct alphabet was early used by the Tamil people in South India in the early centuries A. D. This has almost disappeared, and, except perhaps in Malabar, has left no traces in India proper. For reasons that it would be tedious to give here, though this third alphabet has the same method of marking the vowels in the middle of words as the other two alphabets, which, in some ways, recalls the Semitic way of effecting the same object, it is impossible to trace its origin to either of the other alphabets, or *vice versa.* It is, however, impossible to doubt that all three are from the same original source, though derived, probably, at different periods.

That we can read these alphabets, is due to most illustrious names. The second was deciphered by Prinsep; the first by Edwin Norris; and the third by F. W. Ellis. Edward Thomas has chiefly created the history of the first, and has shown what may probably be done in the future. But many differences of opinion have arisen.

The discovery of Professor Sayce has now put the key-stone to the arch that has been so long waiting its completion. It is as follows: As many will know, there are some Babylonian contract tablets in the British Museum; one of these has a docket by one of the contracting parties in a hitherto unknown character. This person is called Urmanu (Professor Sayce informs me) in the cuneiform part of the document. This had, no doubt, been seen by others, but to Professor Sayce is due the suggestion that it might be an Aramaic character subsequently imported into India. With this discovery, he most kindly sent me a specimen in March last; which, directly I examined it, disclosed a character closely resembling the South Açoka alphabet, with vowels marked as was done in the Indian alphabet. Here at last, then, was the long wished-for original of these Indian alphabets that had puzzled Orientalists for so many years. I could at once, besides the vowel signs, identify several letters, k, m, r, s, &c.; but the language does not in any way seem to be Sanskritic or Indian. At the end is what Professor Sayce identified as a signature, and this appears to me to be Urmanu, which the cuneiform part shows is the writer's name. The document is dated in the reign of Artaxerxes II. (?). Thus it is earlier than any Indian inscription; but, as the language is not Indian, it cannot, anyhow, be of Indian origin. Everything points to a foreign origin for the Indian alphabets, and it therefore clearly shows that Professor Sayce has discovered the source. —*Dr. A. Burnell in the Academy.*

MAGIC PHOTOGRAPHS.

Magic photographs, in which the image is developed by tobacco smoke, have been lately supplied in various tobacco shops on the European Continent. A cigarette mouthpiece is provided, and with it are some white photographic papers about the size of a postage-stamp. One of the latter is placed over a lateral orifice in the mouthpiece and a sliding piece drawn over it. After smoking, one finds the image on the paper. *La Nature* explains the process. A small photograph, prepared on chloride of silver paper, as usual, but without intensifying, is put in a solution of bichloride of mercury, where it pales and disappears. The bichloride of mercury changes the photograph partly into protochloride of mercury, also white, making the image invisible. The image may be brought back by action of hypochlorite of soda, or of ammoniacal vapors. Tobacco smoke, as containing the latter, does very well. The principle of magic photographs was indicated by Herschel in 1840.

COPYING DRAWINGS IN COLOR.

A German scientific journal gives the following method, known as Tilhets, for copying drawings in any desired color. The paper on which the copy is to appear, is first dipped in a bath consisting of 30 parts of white soap, 30 parts of alum, 40 parts of English glue, 10 parts of albumen, 2 parts of glacial acetic acid, 10 parts of alcohol of 60°, and 500 parts of water. It is afterwards put into a second bath, which contains 50 parts of burned umber ground in alcohol, 20 parts of lampblack, 10 parts of English glue, and 10 parts of bichromate of potash in 500 parts of water. They are now sensitive to light, and must, therefore, be preserved in the dark. In preparing paper to make the positive print, another bath is made just like the first one, except that lampblack is substituted for the burnt umber. To obtain colored positives, the black is replaced by some red, blue, or other pigment.

In making the copy, the drawing to be copied is put in a photographic printing frame, and the negative paper laid on it, and then exposed in the usual manner. In clear weather an illumination of two minutes will suffice. After the exposure, the negative is put in water to develop it, and the drawing will appear in white on a dark ground; in other words, it is a negative or reversed picture The paper is then dried, and a positive made from it by placing it on the glass of a printing frame, and laying the positive paper upon it and exposing as before. After placing the frame in the sun for two minutes, the positive is taken out and put in water. The black dissolves off without the necessity of moving back and forth.

It was discovered in 1826 by a French engineer, that when a plate was held normal to the axis of a jet issuing from an orifice under pressure, and at a certain height above the jet, it was repelled, whereas if held lower, it was attracted. It was also found that there was a neutral point at which the plate was supported on the jet, and emitted an audible note as it oscillated about this position of equilibrium. It may not be without interest in this connection, to state that Th. Vautier has recently succeeded in evoking very high sounds in this manner, and registering them. With a jet of steam having a pressure in the boiler of 4½ atmospheres and issuing from an orifice about 1 inch in diameter, against a plate ¼ inch in diameter and .06 inch thick, held .007 inch from the orifice, a sharp note was obtained, the number of vibrations per second being about 7,250.

EVANS & GARDNER, 43 Elm St., New York,

Manufacturers of Rubber and Metal Stationery Specialties.

☞ SOLE AGENTS FOR EXCELSIOR PENCIL SHARPENERS.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President. **DALTON, MASS., U. S. A.** JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show.

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U.S.A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

REGULAR QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our **New York General Agency, GEO. B. HURD & CO.,** *79 Beekman Street.*

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

☞ ANNOUNCEMENT. ☜

WE beg leave to announce the completion of our line of CHRISTMAS and NEW YEAR CARDS for the Season 1882-1883, for which our Agents will commence to solicit orders in May. We feel confident that the popularity which our Cards have enjoyed in former seasons will again be secured by the efforts we have made to bring out a line in advance of all our previous productions. The names of the Artists who have contributed designs is proof of our continued efforts to reach the highest excellence. We will name only the following:

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,

MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

Due regard has again been paid to the literary matter in connection with the designs, and many of the latter are accompanied by original poems, from writers of note, such as MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

Fringed Cards—All furnished with envelopes and protectors.
Envelopes—Furnished without extra charge for all cards for which the list price is $1.80 and over.
Backs have been specially designed for our cards, adding an attractive feature to them.

Bird Cards, by Miss F. Bridges, Mrs. O. E. Whitney and others
Figure Cards, by Miss L. B. Humphrey, Miss Rosina Emmet, Miss L. B. Comins, Alexander Sandier and others.
Flower Cards, by Mrs. O. E. Whitney and others.
Fan Cards, by Mrs. O. E. Whitney, in new styles.

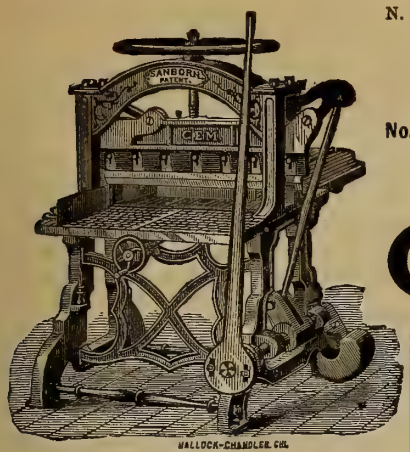
PRANG'S PRIZE CHRISTMAS CARDS.

THIRD COMPETITION

FIRST.—Artists' and Popular Prize Card ($2,000), by Miss Dora Wheeler,
SECOND.—Artists' Prize Card ($500), by Miss L. B. Humphrey,
SECOND.—Popular Prize Card ($500), by Walter Satterlee,
THIRD.—Artists' Prize Card ($300), by Miss L. B. Humphrey,
THIRD.—Popular Prize Card ($300), by Frederick Dielman,
FOURTH.—Artists' Prize Card ($200), by Alfred Fredericks,
FOURTH.—Popular Prize Card ($200), by Miss Florence Taber.

All our Prize Cards, and many of the other Christmas and New Year Cards, can be had in heavy mounts, with gilt beveled edges.

NEW YEAR CALLING CARDS.



Something New, in Elegant Designs.

—— OTHER NOVELTIES IN PREPARATION.——

☞ Delivery of orders will commence September 1. Descriptive Price Lists now ready, and sent on application.

THE BEST DIARY.

ECONOMICAL DAILY MEMORANDUM

·1883·

ANNOUNCEMENT.

WE present for approval the "Economical Daily Memorandum" in various sizes and styles, printed on good paper, strongly sewed and neatly bound, with leather backs and printed sides, also in full leather.

Besides a space for each day of the year it contains tables of the rates for foreign and domestic postage and money orders, valuable postal information, calendar and cash account for each month.

In addition to days of the week and month, the diary is numbered for the days of the year, a valuable improvement, useful for time calculations.

Dealers, whose trade does not warrant an investment of the considerable sum required to purchase an assortment of Diaries in the usual extended variety, will find a few dollars profitably spent in buying these goods, which come within the reach of all.

Dealers, already carrying a line of other Diaries, will find the "Economical" a valuable addition. Being made without flap or tuck they can be retailed at the price commonly charged for similar plain memorandum books, and therefore extend the sale to a different class of buyers.

We will be glad to furnish the trade samples at a reduced price. We solicit early correspondence in order that books may be received in time to make a selection and place an order for early fall trade.

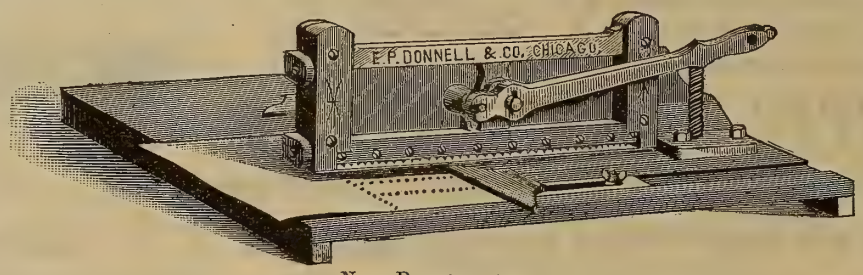
Owing to the limited season during which Diaries are retailed, the demand must be anticipated by both jobbers and manufacturers.

VAN ANTWERP, BRAGG & CO.,

Blank Book Manufacturers,

CINCINNATI, O.

Trade Novelties.



[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

A NEW PERFORATOR.

Herewith is illustrated a new perforating machine, which, while simple and inexpensive, is said to be equally as effective as the more costly machines, and to embody some very desirable improvements found in no other.

It is specially adapted to the requirements of printers, bookbinders, lithographers and stationers, who will thus be enabled to do their own perforating more economically than by letting it out, as is customary at present.

This machine will perforate any size of paper without folding, and is claimed to do as perfect and rapid work as any machine made. It cuts a clear round hole, as in postage stamps, &c., and will make a line of perforations fourteen inches in length. The needles being in sections, save considerable cost in changing, replacing, &c., and the sheet being received at the end, obviates the necessity of taking out the needless for stubs in check work, &c. The two guides perfectly control the depth and direction of perforations. It can be furnished with hand or foot power, as desired. E. P. Donnell & Co., Chicago, are the manufacturers.

NEW PERFORATOR.

NEW PATENTS.

No. 261,659. Lead and Crayon Holder.—Claes W. Bowman, New York, N. Y., assignor to Joseph Reckendorfer, same place.

The combination with the pencil sheath or case and a longitudinally-movable lead-containing tube, of an expansible lead-clamping ring composed of a coil of one or more turns of wire carried by the tube, and having its ends connected to the tube and sheath in such manner as to be thereby caused to expand or contract, according to the direction in which the tube is moved.

No. 261,673. Scale for Printed Matter.—Jno. H. Chataigne, Richmond, Va.

The combination of a rule, provided with a groove at its centre, with a metallic plate secured to one end of the rule, and which forms pointers or projections, and one or more spring-slides, which are adapted to catch in the central groove and be adjusted back and forth upon the rule.

LABELS.

No. 2,727. Title: "Durable Shelf Covers."—Herman Force and John U. Buchanan, Montrose, N. Y.

DOUBLE TIME-KEEPING.

An invention has just been patented by which the time of two distinct places, at whatever distance situated, can be simultaneously marked on the face of a watch or other timepiece without interfering with the fixed time which it is desired to keep or necessitating the moving of the hands of the piece. This invention consists in two supplemental movable rims, working independently of the fixed dial and of each other. The inner rim is divided into hour sections, the outer one into minutes. Two tiny wheels, projecting slightly from the metal bezel which holds the crystal in position, enable the wearer to bring the hour and minute at which he wishes to set these movable dials exactly opposite the hour or fraction of hour and minute respectively then and there indicated by the hands of the fixed dial. By this simple device two different times are kept at the option of the wearer. The convenience of such an arrangement to the traveling public is self-evident. These supplemental dials may also be used for the recording of engagements, as either hour or minute chronographs, and for a variety of other purposes which will readily suggest themselves to the reader. The inventor is John J. D. Trenor, of New York.

Dr. Wallaston ascertained that the parts of the glass to which the diamond is applied are forced asunder, as by a wedge, to a most minute distance, without being removed; so that a superficial continuous crack is made from one end of the intended cut to the other. After this, any small force applied to one extremity is sufficient to extend this crack through all the whole substance and across the glass; for, since the strain at each instant in the progress of the crack is confined nearly to a mathematical point at the bottom of the fissure, the effort necessary for carrying it through is proportionally small. Dr. Wallaston found by trial that the cut caused by the mere passage of the diamond need not penetrate so much as the two-hundredth part of an inch. He found, also, that other mineral bodies, recently ground into the same form, are capable of cutting glass; but they cannot long retain that power, from want of the requisite hardness.

He is truly great that is great in charity. He is truly little that is little in himself, and that maketh no account of any height of honor.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

J. W. Hinchon, publisher, Waukon, Iowa, has sold out.

George H. Winters, printer, Mansfield, Ohio, has assigned.

I. M. Kurtz, bookseller and stationer, Weston, Mo., has sold out.

A. Sower, dealer in notions, Austin, Nev., is advertising to sell out.

William Gunn, stationer, &c., St. Thomas, Ont., is advertising his business for sale.

W. D. Blackman & Co. succeed Drummond & Jones, dealers in notions, Napoleon, Ohio.

The stock of Charles S. Coburn, bookseller and stationer, Lawrence, Mass., has been attached.

Friend & Co., stationers, San Francisco, Cal., have dissolved partnership. P. Friend continues.

John S. Saul, publisher of *The Age*, Strathroy, Ont., has been succeeded by Evans Brothers.

A salesman acquainted with the Southern or Western trade can find a position with A. C. Farley & Co., Philadelphia.

J. B. Lippincott & Co., Philadelphia, have their August "Monthly Bulletin" of new publications ready for the trade.

Hilpert, Paetow & Co., publishers of the *Tribune*, St. Louis, Mo., have dissolved partnership. Otto Hilpert continues.

C. E. Stevens & Sons, booksellers and stationers, Astoria, Oregon, have dissolved partnership. C. E. Stevens retiring. C. S. Brown has been admitted and style changed to B. F. Stevens & Co.

Thomas McLoughlin's paper mill, near Pittstown Corners, N. Y., was burned at 1 o'clock Friday morning of last week. Loss, $10,000; insurance, $21,225. The origin of the fire is not known. The mill was closed two weeks ago. It will be rebuilt.

Bulkley, Dunton & Co.'s Knickerbocker cover papers, are selling very fast, the firm having calls for them from all over the country. They are generally considered the most desirable cover on the market. The firm is just getting in another large invoice of them.

On Wednesday morning a fire broke out in the printing and publishing establishment of Duffy, Cashman & Co., in Fayette place, Boston. The fire started in the fifth story, and was mostly confined to that floor, but the rest of the building was drenched with water. One-half of the third floor was used as a composing room by Duffy, Cashman & Co.; loss, $15,000. The origin of the fire is unknown. Duffy, Cashman & Co. were insured for $25,000.

A disastrous fire occurred on the East side of the city shortly before midnight last night, in which the large six-story brick building at No. 398 Madison street, extending through to Monroe street, was entirely destroyed. Among other occupants burned out were Emil Steffens, lithographer, and Robey & Cole, cardboard manufacturers. The fire started on the third floor, and at 2 o'clock this morning was still burning fiercely. The total loss is estimated at $100,000, which is distributed as follows: Emil Steffens, $25,000, insurance, $10,000; Robey & Cole, $50,000, insurance unknown.

Myers Brothers invite the attention of the trade to the lines of cards and souvenirs produced by John Walker & Co., 96 Farringdon street, London, who have established for themselves a reputation for fecundity of ideas, and who are preparing to outdo their previous efforts in these luxurious goods. Costly materials and a high standard of taste, as well as of technique, are the qualities on which they found their claim to attention. Their novelties consist of hand-painted ivory cards, Murcian cork cards, hand-painted ivorine cards, hand-painted bevel-edged cards, all new styles and shapes, and comprising some of the most striking novelties in the trade. A large sale is expected for the Murcian cork cards, which rank among the leading novelties of the season. Each card is placed inside of a handsome toned protector, and is put up in a cardboard box, neatly trimmed and covered.

The principal creditors of Burr Brothers, paper manufacturers, Philadelphia, have agreed to take the assets of the firm and dispose of them to the best advantage, and allow the firm to continue in business. It is quite uncertain what proportion of their claims will be obtained.

The paper warehouse of S. W. Stratton & Co., 81 Exchange street, Rochester, N. Y., was burned. The fire started upon an upper floor from spontaneous combustion. The loss on stock by the fire is estimated at $10,000; insurance, $6,200.

The building of the Hamilton, Ont., *Tribune* Printing Company, destroyed by fire August 6, was insured for $16,000. The water pressure was extremely light, and the fire had been burning some time before it was discovered.

The fire on August 7 at J. L. Shoemaker & Co.'s leather factory, Ninth and Taylor streets, Philadelphia, will cause no delay in the filling of their orders, as repairs were made at once, and the factory is running as usual.

The Springfield City Paper Company has just settled in its new quarters on Hampden street. It now has every facility for doing business, and has a large stock of all kinds of paper.

J. H. McKinnon has been admitted as a partner in the firm of H. N. Brooks & Co., stationers and blank-book manufacturers, 12 Palace Block, Meriden, Conn.

Marshall & Overacker, publishers of the *Republican*, Rensselaer, Ind., have dissolved partnership. George E. Marshall continues.

A. McCreary, bookseller, &c., Washington, D. C., has been closed on chattel deed of trust, given to secure W. B. Shaw.

J. M. Beelman & Co., publishers of the *Republican*, Findlay, Ohio, have dissolved partnership.

Putnam & Thompson, publishers of the *Daily Times*, Columbus, Ohio, have dissolved partnership.

W. Marshall, bookseller and stationer, Farmington, Ill., has been succeeded by F. O. Dewy.

L. X. Goulet, publisher of the *Democrat*, Lapeer, Mich., has sold out to Kudner & Phelps.

T. Hager, newsdealer, &c., Battle Mountain, Nev., has sold the business to Haws Brothers.

George S. King, publisher of the *Democrat*, Oswego, Kan., is advertising to close out.

Geo. Yarnell, publisher of the *News*, Lewiston, Ill., has sold out to L. S. Kasmussen.

E. E. Ritty, printer and dealer in notions, Seymour, Ind., has sold out.

John E. Blaine & Co., booksellers and stationers, Mayville, Ky., have sold out.

Maggie G. Baker, stationer, &c., Philadelphia, Pa., is advertising to sell out.

F. L. Mitchell, publisher of the *News*, Elk River, Minn., has sold out to A. N. Dare.

John Weightman, stationer, &c., Dillon, Montana, has been burned out. Loss $3,500; no insurance.

Charles Shreber, paper stock dealer, Chambersburg, Pa., has been burned out. Loss estimated at $8,000.

Comstock & Ostrander, printers, Caledonia, Minn., have dissolved partnership; they are succeeded by O. E. Comstock.

The firm of J. P. Lilly & Co., booksellers and stationers, Sullivan, Ill., has been dissolved by the withdrawal of J. P. Lilly.

Willy Wallach, who has been in Europe for some three months selecting goods, sailed for this city from Havre on August 11 per steamship Gellert.

Mr. French, of the Mackinnon Pen Company, reports that he is prepared to prosecute a vigorous fall campaign with his new American stylographic pen, and that trade is opening very fairly. There are no outstanding licenses issued by this company and all pens of this description are claimed to be infringements.

Henry Levy & Son show a large line of musical goods in the shape of necessaires work-boxes, odor cases, jewel cases, &c.; each article of this line gives music as soon as it is opened. The line comprises over a thousand styles, most of which come in the richest and latest shades of plush, and leather. One of the designs in necessaires deserves special mention. It is shaped like a sewing machine and is a very unique article. The firm also shows a large line of smokers' stands and tables, all of new design. It is daily opening up new goods.

Charles J. Cohen, Philadelphia, has now in port a shipment from London of twenty-eight cases, consisting principally of scrap-books. These, Mr. Cohen states, are all of new and unique designs, he having been specially favored by the designers in England with the opportunity of selecting such as were suited to his taste, although they would not be generally shown until much later in the season. A most excellent novelty in staple goods which Mr. Cohen shows is school and office sponge, put up on cards of twelve in various sizes and qualities; the sponge is entirely free from sand, and it will be found by retailers to be a most desirable shape in which to dispose of this usually troublesome article.

Parties using postal cards should always be particular to write out distinctly the name of the town and State wherein they reside. It too frequently happens that post-office officials either neglect entirely to stamp the card, or do it so very carelessly that neither the town nor State can be deciphered. John Wilson's Sons have lately received many postal requests for catalogues whereon nothing indicated the location of the sender, and consequently they could not fulfill the writer's demand. Parties who have not received the Messrs. Wilson's catalogue will do well to repeat their request and heed this reminder.

Myers Brothers have introduced the latest novelties in the card line. They consist of metal plates which come in fanciful shapes and of various styles, and contain mottoes and designs suitable for Christmas, New Year, and birthday purposes. Each design comes plated either in gold or silver, and is put up in a satin-lined morocco case, with a niche to fit the plate. This

line is adapted to bring Christmas cards within the reach of jewelers.

McLoughlin Brothers have issued a new catalogue of toy books, games, &c. It is neatly compiled, profusely illustrated, and contains a large amount of descriptive matter, and an extensive list of new goods.

I. H. Hamburger reports an excellent trade, which he says has sprung up within the past few days. He is now bringing out a beautiful line of satin and velvet goods. One of the designs which is patented is in book form, its outside being of velvet, richly ornamented, while the inner part is of satin, illuminated by children's heads. This article is meeting with a great demand.

The iron book support or rack, heretofore called the "Economy," and made by the late Economy Company, now comes out as the "Library Book Support," the Library Bureau having become sole manufacturer of this as of most of the Economy specialties. This bureau occupies the old Economy quarters over 28 to 34 Hawley street, Boston, and in addition has recently added the basement and a retail salesroom on the first floor. Dealers wishing the "Perfect" inkstands (with rubber pouch in square, black, cut glass, nickel mounted), brush erasers, or any of over one hundred specialties of this sort, will reach first hands by sending to the Library Bureau, Boston.

Hungarian vases are one of the latest and most fascinating series of designs emanating from European potteries. One style in particular, just imported by John Wilson's Sons, is a bisque vase of antique pattern, 7 inches high, 4¾ wide, and 3½ through. This in color is simply a dark clay tint of pleasing shade. The body of the vase is rectangular, with contracted neck and mouth-shaped top. Around the neck is twined a rose vine, with leaves and thorns and bearing a large full-blown rose, whose delicate porcelain petals vie with the natural prototype in form, size and coloring. This beautiful flower is nearly 2 inches in height and 3 inches across, being perched on the upper right-hand corner of the vase, and contrasting finely with the warm neutral background, while somewhat lower down and nearer the left-hand side is a half-grown bud, equally natural and effective. In fine contrast with this is a card-receiver, consisting of a large leaf partially rolled up and bearing a cactus blossom. Large and small, the designs are all rich and pleasing and well worth a visit of inspection.

J. H. Bufford's Sons have this week introduced a new line of folders which are intended for orders of dance. Some are in imitation of steel engravings, while others are richly illuminated in a variety of colors and cut in odd and unique designs. Many of the latter contain illustrations which make them specially suitable to firemen, soldiers, boatmen, &c. The firm also shows a line of cheap but very attractive advertising cards in a variety of tints and designs, among the latter being children at play, fancy heads with Gainsborough hats, flowers and landscapes. There are fourteen workings in many of these. Some rare lines of visiting cards are also shown.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, AUGUST 17, 1882.

Advertisements cannot be received for insertion in he current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

AGAIN we recur to the export trade. The recent success of American exhibitors at Christchurch, N. Z., where the largest percentage of first awards was secured by our manufacturers, makes an assurance of growing trade with that part of the world. If, after attaining honor and renown, we fail to take advantage of the opening for business which is afforded us, we can scarcely hope to build up a foreign trade when we most need it. Neglect of this kind is inexcusable.

THERE does not seem to be any misgiving about the character of the fall trade. Our correspondence this week covers several Southern and Western distributing points, and coincidence of opinion and cheerful expectancy are apparent. It will certainly be most satisfactory if the hopes expressed are fairly sustained. But we do not the less advise caution. The flush of good times and the promise of success are apt to carry people beyond the limits of prudence. It is as much a duty as ever to keep within bounds.

THERE is a remarkable fertility of invention in the toy line. Scarcely a week goes by but some novelty is brought forth, and there seems to be no end to new ideas or the application and improvement of old ideas in a new form. American toys are making their way the world over, and while they are pleasing they are also sufficiently simple and substantial to commend themselves to buyers. Once we depended upon Europe for our games and childhood's amusements. The drift now seems to be tending in the other direction.

NOTHING further has been heard of the complaint of "short count" in pens. Are the members of the stationery trade at a loss to locate the offenders? If they are not, it becomes their duty to expose the persons who make a practice of sending out fraudulently-packed goods and getting full prices for them. THE STATIONER only wants cold facts, well substantiated, to initiate an exposure of every bit of roguery. We are not afraid of libel suits when we know that we are right, and we do not expect to be condemned on the ground of "the greater the truth, the greater the libel." What we want to know is: Who did it, and what did he do?

TWO years ago we were told that the demand for card souvenirs and charming trifles in the way of holiday reminders was dying out. Some people claimed that the business was overdone, and that the fashion would change, and that many would find themselves without trade. The tide of fancy has not yet seemingly reached its height, and the demand is as great as ever. At one time we said that we doubted if the custom of giving cards would die out, but that it would most likely lead to the rejection of inferior works, and force manufacturers to lavish all of their skill and care in the production and execution of beautiful designs. There has been no reason to change this opinion. All conditions seem to favor it, and we have only to look at the diversity and character of the offerings this season to see that greater effort has been bestowed in presenting to the public attractive and finely-wrought articles. It is creditable to public taste that the demand enforces such a development of artistic work. We believe that this demand will continue, but it will put the designers to their wits' end to keep up with it and to sustain their reputation.

ANSWERS TO CORRESPONDENTS.

J. L. asks where he can obtain the substance used in "blocking" pads, tablets, &c.

Ans.—Glue is ordinarily used. There is a patented preparation of glue, which can be used without covering with paper, but it is too costly for common use.

F. L. J. wants to know: 1. Where he can get palettes and fancy fans for advertising and decorating, in lots of 500 or less. 2. What is the charge per volume for binding THE STATIONER.

Ans.—1. J. H. Bufford's Sons, 295 Broadway; Hastings, Todd & Co., 35 Beekman street; Ph. Hake, corner Ann and Beekman streets; J. E. Linde. 15 Beekman street; Robert Gair, — Chambers street, all in New York. Almost any large jobber in any other city can supply you. 2. We can supply you with a superior binder for fifty cents.

W. P. & Co. ask if a cold stereotyping process, like that recently mentioned in THE STATIONER, is known to the American trade.

Ans.—We cannot find that there is any known. The trade here would be glad to get it.

CHATTEL MORTGAGES.

[In the appended list R. signifies a renewal of a pre-existing mortgage; B. S., bill of sale; and Real, a mortgage on real estate.]

Mortgagor.	NEW YORK CITY.	*Amount.*

The Tariff Commission gave a hearing on Monday morning, at Long Branch, to three representatives of the manufacturers of pocket cutlery, who desired a change in the existing tariff from 50 per cent. ad valorem to a specific duty of 50 cents per dozen blades, instruments or erasers, and an ad valorem duty of 30 per cent.; also to Frederick W. Hawley, of New York, a student of economics, in the interest, as he said, of the community.

F. G. Hancock, the well-known and genial manufacturing stationer, of Atlanta, Ga., and general manager of the Southern office of THE STATIONER, is in the city.

NOTES ABOUT TOWN.

H. C. A. Gibbs, with Willy Wallach, returned on Monday from Detroit, where he has been on a visit to his family.

R. R. Cornell, of Cornell & Co., has been confined to his house for the past two weeks, but is out again attending to business.

Max Griebel, of L. Prang & Co., has returned from Sharon Springs, where he has been summering, and is ready for business.

J. P. Dinsmore, of Carter, Dinsmore & Co., manufacturers of Carter's inks, will leave here next week for his annual fall trip to the West.

C. Lovell, with Carter, Dinsmore & Co., manufacturers of Carter's inks, has been down by the seashore for several weeks and has returned looking greatly benefited.

E. B. Green returned home this week after a very pleasant visit of about two weeks at Shelter Island. He noticed among those who were making themselves very agreeable to the ladies Mr. Boorum, of Boorum & Pease.

George Hussennetter, with Willy Wallach, has started this week on his maiden trip as a traveler. He is canvassing the Eastern States. Mr. Hussennetter has been connected with the firm for the past ten years, and is spoken of highly by his acquaintances.

W. K. Evans, of Evans & Gardner, arrived in this city, per steamship City of Montreal, on Saturday from Europe, where he has been for some months in the interest of the firm. Mr. Evans' transatlantic trip seems to have agreed with him, as he looks a perfect picture of health.

Among the visiting members of the trade in the city during the past week were William B. Walker, Baltimore, Md.; F. G. Hancock, Atlanta, Ga.; M. Safford, of M. Safford & Co., Norwich, Conn.; W. Polk, of Grant & Polk, Fargo, D. T.; A. Stearn, of Levy & Stearn, Cleveland, Ohio; C. A. Fraser, of Fraser & Co., San Domingo; E. C. Palmer, of E. C. Palmer & Co., New Orleans, La.; John A. Gebhard, Detroit, Mich.; J. L. Carson, of J. L. Carson & Co., Montreal, Canada; Mr. Howe, of Howe & Smyth, Troy, N. Y.; Mr. Tongue, of J. B. Piet & Co., Baltimore, Md.; R. S. Wetmore, Selma, Ala.; C. C. Jadwin, Honesdale, Pa.; James Inglis, Jr., Paterson, N. J.; John Hooper, of Hooper, Lewis & Co., Boston; T. J. Kellum, of T. J. Kellum & Co., Topeka, Kan.; Mr. Everett, of W. C. & J. F. Kiser & Co., Atlanta, Ga.; Mr. McCormick, of T. H. Payne & Co., Chattanooga, Tenn.; Mr. Miller, of Hooper, Lewis & Co., Boston; Mr. Wilson, of Forsyth & Wilson, Kingston, N. Y.

McCarty & Hasberg have sent to THE STATIONER a very complimentary letter, acknowledging the receipt of a great number of orders secured through an advertisement in the issue of August 3. The letter speaks in the highest terms of THE STATIONER as a medium for general information and advertising. The firm in the advertisement referred to gave a descriptive list of articles, which it put in cases which were offered at $47.50 and $95 each. The firm says that the amount of orders has exceeded anticipations. THE STATIONER acknowledges the compliment. The reputation of McCarty & Hasberg for fair dealing and for representing their goods as they are, has a great deal to do with the influx of orders. They have largely duplicated orders for the articles which are contained in these cases, and hope to be able to announce soon that they will be in a position to furnish more than one case to each firm, which as yet they have been unable to do. In this way they hope to accommodate as many of the trade as possible.

ZINC IN BRONZES.

At a recent meeting of the Berlin Society of Architects some interesting remarks were made upon the causes of the black and green incrustations which time brings out upon bronze statues. It has often been observed that the atmosphere of modern cities is very unfavorable to bronze, giving it a dirty black color instead of the beautiful green patina which characterizes the ancient statues of the same metal. A committee of the Industrial Union recently undertook the investigation of the matter, and among other things noticed that a certain statue, that called the Alten Fritz, in Berlin, was entirely covered with a black coating, while a bronze cannon which stood in front of the arsenal near-by was of a beautiful green color. As these two must have been subjected to the same atmospheric influence, it seemed very reasonable to suppose that the composition of the alloy might have been the essential condition in determining the black or green color of the patina, and an analysis was made, which showed that while the cannon was composed, like all of the so-called bronze ordnance, of about nine parts copper to one of tin, the statue contained a considerable proportion of zinc. This is usually the case with modern bronze statuary, the substitution of zinc for tin in the alloy giving certain desirable qualities of fusibility, while the antique works have a composition very nearly similar to that of gun-metal; zinc, which was unknown in Europe until the seventeenth century, being, of course, absent from the mixture. These indications that the substitution of zinc for tin is the true cause of the inferior color of modern bronzes were supported by the result of an experiment, in which several bronze alloys were subjected to the action of a solution of copper. It was found that under this treatment a composition of copper and tin alone acquires a green coating, while those containing zinc were blacked to a greater or less degree in proportion to the amount of zinc in the composition. To architects this investigation is of more interest than might appear at the first glance. Many of them, it is true, have occasion at times to direct works of sculpture in bronze, and it is certainly desirable to know the means of obtaining that rich green coloration of the antique statues which so many attempts have been made in modern times to imitate; but a much larger number are likely to be able to control the manufacture of bronze hardware, the value of which would be greatly increased if it could be used in its natural state, without any of the artificial coloring which so much of it receives, and with the certainty that age and use would only increase its beauty.

THE "BEE LINE."

A "bee line" is the shortest route between two given points, and this is what the "Bee Line" people claim to have between the great cities of the East, West and South—over the Cleveland, Columbus, Cincinnati and Indianapolis Railway, the Indianapolis and St. Louis Railroad, and the Dayton and Union Railroad, with lines of through cars without change between Cleveland and Columbus, Cincinnati, Indianapolis and St. Louis.

For the benefit of all travelers and residents of towns and cities along its lines, the "Bee Line" management is now running on all of its trains new coaches, which it is thought cannot be excelled for elegance and comfort. The cars are 45 feet long, set on standard trucks, with Allen paper wheels, steel tire (same as used by the Pullman and Wagner companies under their sleeping cars) and have the latest pattern Westinghouse air and automatic brakes, Miller platform with safety chain and hooks. Inside, the finish is all of solid mahogany, twenty-six seats with reversible backs, upholstered in French plain colored cherry plush, with springs in cushions and backs; the windows are large of French plate glass and double blinds. In one end of the coach, in addition to the ladies' and gentlemen's toilet rooms, the company has placed a wash-room with marble basin, and large plate glass mirror, and in which at all times patrons of the line will find towels and soap—furnished them by the company free of cost. In winter the cars are warmed by Baker & Smith patent heaters with pipes running under the seats. With the very perfect ventilation, and neat and tasty appearance of the whole interior, one feels that traveling by rail is no longer a burden but a pleasant and desirable recreation. That the people along the line will appreciate the new departure of this enterprising company, there is no doubt.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, August 16, 1882.

THE MONEY MARKET.—The money market continues to work easily, and the rates of interest are comparatively low, viz., 4@6 per cent. on stock collateral, and 5@6 per cent. discount of prime commercial paper. The stock market has been quite devoid of new features, and the volume of business has not been above a light summer average. As compared with the closing days of last week prices have been subject to only slight changes. Government bonds were higher for the 4s, and otherwise unchanged. Railroad bonds are quiet and strong. Sterling exchange is firm for short bills and cable transfers and steady for long bills. The strength of short sight bills and cables is due to a brisk inquiry from importers, who are remitting freely for goods bought for the autumn trade.

THE PAPER MARKET.—While August is generally regarded as the most quiet month in the year, business so far is generally reported as ahead of the average of past years. Large consumers, taking advantage of the low ruling of prices, have continued to place large orders at the mills, and the low water has operated to sustain the market against any further decline. While no apparent change in prices is to be seen, there is a better feeling, and dealers find it much easier to get current figures than they did last month. Manillas show a firmer tendency, although orders are still being accepted at former quotations. We hear of an order being placed at a mill within the past week for 3,000 reams, with the notice given that any further orders must be at an advance of at least a quarter of a cent. The outcome of the closing down of most of the straw-wrapping mills is a scarcity of medium grocery paper and a small advance in price, this grade quoting on the basis of 33@34c. for 10 pounds. Heavy papers are steady, and shipping grades irregular. The straw paper manufacturers met at Albany on Tuesday, but the attendance was very small, and so little interest taken in the meeting, that they adjourned without taking any action.

THE STATIONERY MARKET.—Trade has received an additional impetus since our last review, some branches having all they can do to execute their orders, and a general air of cheerfulness pervades throughout. In the fancy goods trade the greatest amount of activity is to be seen, each house vieing with its competitors as to which shall sell the most goods. Buyers continue to arrive from the West and Northwest, and some from the South, but the season is a little early for the latter to come in very great numbers. In the line of staples, the blank-book and envelope manufacturers are especially busy. The formation of the combination on envelopes has imparted greater steadiness to prices and given an impetus to the demand. Staple goods generally keep very steady and firm.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

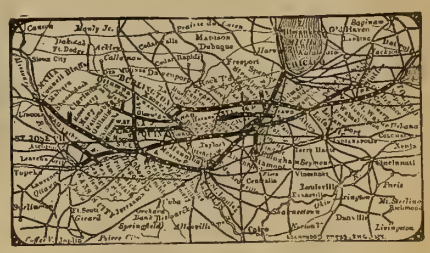
PAINTING ZINC.

A difficulty is often experienced in causing oil-colors to adhere to sheet zinc. Boettger recommends the employment of a mordant, so to speak, of the following composition: One quart of chloride of copper, one of nitrate of copper and one of sal-ammoniac, are to be dissolved in 64 parts of water, to which solution is to be added one part of commercial hydrochloric acid. The sheets of zinc are to be brushed over with this liquid, which gives them a deep black color. In the course of from twelve to twenty-four hours they become dry, and to their now dirty gray surface a coat of any oil-color will firmly adhere. Some sheets of zinc, prepared in this way, and afterward painted, have been found to entirely withstand all the atmospheric changes of winter and summer.



ARTIFICIAL SHAGREEN.

The substance known as shagreen, used in covering instrument cases, telescopes, sword hilts, &c., has generally been supposed to be derived from the skin of sharks and rays. We are now informed that an imitation is made in Russia, which can scarcely be distinguished from the original, and that this is prepared from the skins of horses, soaked in water and scraped; and while the skin is still soft, small seeds, such as mustard or chenopodium, are imbedded in it, and the surface afterward shaved down. By dyeing with green, produced by the action of sal-ammoniac, or copper filings, and drying, the imitation in question is satisfactorily accomplished.

Modest persons are not the soonest frightened. "I wonder what they will think of me!" is not the inquiry of humility, but vanity.

IMPROVED MACHINERY AND TOOLS,

—FOR—

Bookbinders, Printers, and Paper-Box Makers.

$35.00 PERFORATOR.

ROUND HOLE, HAND OR FOOT POWER.

This Machine has been long wanted in the trade for Printers, Bookbinders, Lithographers, &c. The price will enable all concerns to do their own perforating. This Machine will allow any size of paper to be perforated without folding, and will do as perfect and as rapid work as any other machine made. It makes a round hole same as on postage-stamp sheets, will perforate 14 inches long. The needles are in sections, thereby saving a great cost in replacing the needles, and there is no taking out of needles for the stubs in check-work, &c , which saves great time. Can be run by foot-power if desired.

WILLIAMSON'S MAGIC POLE

For taking down from high piles, or shelves, or putting up in high places, any kind of box having a projecting lid. Delivered to any point in the United States except the Pacific Slope, for $1.25. Liberal Discount to the Trade to sell again. Patented July 12, 1881.

WILLIAMSON'S GRIP TABLET.

The GRIP TABLET is a case to hold from 1 to 150 loose sheets of Note Heads, Letter Heads, &c., binding them at once into tablet form, or blocks, without the use of glue, paste or any other contrivance, which mars the beauty of a well printed sheet, and is no larger than an ordinary tablet, and is renewable; the sheets are simply drawn out. Inclose 25 cents for a sample any desired size.

J. H. WILLIAMSON, Patentee and Mfr., 2219 Gamble Avenue, ST. LOUIS, Mo.

Something Quite New in NOTE PAPERS.

THE "Morocco Leather Note Paper." | THE "Russia Leather Note Paper."

THE STATIONERY TRADES JOURNAL says: "This is perhaps the most decided novelty in note paper and envelopes that has been offered to the trade since the advent of 'Repps.' The surface of the paper is lightly embossed to resemble the peculiar grains of morocco or russia leather, but while the imitation is perfect, the surface presented is pleasanter to write on than in the repps, and for this reason the paper will be found to suit a large circle of consumers. It has a rich and dainty appearance, qualities which are even more strikingly displayed in the envelopes. In either grain the paper is offered in four tints, with court-shaped envelopes to match. The price is moderate, ranging with the best class of medium qualities, and the paper will consequently command a very extensive trade, its pleasing novelty insuring its admission to the best, and its price not forbidding introduction in lower class businesses. The packeting deserves a word of notice for its very neat appearance. We believe the paper will take the public fancy in a way that nothing else of the kind has done for a long time."

CEDAR LAKE.

At last Chicago has discovered a summer lake of its own, as beautiful as any in Wisconsin or Minnesota, and only forty miles from the heart of the city. This is Cedar Lake, on the new line of the Louisville, New Albany and Chicago Railroad. The lake is beautiful, clear as crystal, and fresh as Aurora, being fed by live springs from the bottom. It is full of all native species of game fish, and, although only made accessible a few weeks since, is already so crowded with excursionists that a large camp is pitched for their accommodation in the woods, on the borders of the lake; and the whole is under charge of one of Chicago's ablest hotel men. Excursion trains are run on quick time, and at reduced rates, every Sunday, and it will pay visitors to Chicago to run down and see how beautiful and free a Western watering-place can be.

This is one of the sad conditions of life, that experience is not transmissible. No man will learn from the sufferings of another—he must suffer himself.

Men have sight, women insight.

CHELSEA ART CASTINGS.

We lately had an opportunity of examining, at the art rooms of Wellington & Burridge, Boston, a fine display of ornamental art castings made at Chelsea by the Magee Art Casting Company. An exhibition of this kind is well worth the attention of iron founders, whatever their line of work, as it shows what may be accomplished with cast iron in the way of reproductions of art patterns. To those who have not given the subject attention, these castings are likely to afford many surprises. Probably their chief excellence consists in the fact that they are mostly reproductions of good designs. A great many founders seem to believe that to make an art casting, infinitely fine detail work is needed, and that if this is faithfully copied a valuable result is reached. They also appear to think this impracticable in cast iron. This is usually a mistake. Iron is a material, which, if left to its own color, is best adapted to the reproduction of designs characterized as "line work" rather than by freedom and breadth of treatment. When, however, the iron can be colored by electro-plating it may take upon itself all the characteristics of bronze or brass castings, and also of hammered work.

As we have had occasion to mention previously, iron, if carefully cast into molds having a sufficiently fine surface, is capable of producing a most delicate impression. Indeed, lace work might be cast in iron could a sufficiently fine material for a mold be found. When ordinary sand is used the surface must be rough, and if the iron is used in its natural color broad effects and not fine details are usually sought. Cast iron, in and of itself as an artistic material, is entirely lacking in what are known to artists as half tints. That is to say, an iron casting will show upon its edges and those parts on which the light falls very bright reflections. The shadows will be very black, so dark, indeed, that if the light is very strong the shadows themselves appear like black, blank masses. There are no intermediate shades. To make use of this effectively the artist must design in a very different manner from that necessary when using brass, bronze, copper or silver. Of the objects which we examined at the art rooms, we have before us, as we write, a number of photographs representing the more important pieces. These consist of panels, plaques, medallions and one or two pieces of armor. All excepting the armor and a pair of ancient swords are finished in bronze, brass or copper colors, and have surfaces of these materials; consequently, the designs lose nothing on account of the color of the iron. There are two helmets, both highly ornamented with designs of very great beauty. The relief is high and the work is surprisingly sharp and good. The reproductions are, in all probability, very little less valuable than the originals would be after two or three hundred years of rust and cleaning. The higher portions have of necessity become very considerably polished, and those portions of the design have naturally lost some of their sharpness. This is also true of those portions in very low relief. All this, however, seems to be very exactly reproduced, and, so far as ornamentation goes, these helmets will answer just as well as the real article. Another piece of armor, the exact position of which on the body we are at a loss to determine, has a number of very beautiful designs in low relief on its surface. The centre piece consists of a sort of duel between two warriors on horseback, around whom a battle is raging. Both of the animals on which the combatants are mounted are leaping forward over the body of a third horse, which has just fallen. On the sides there are allegorical figures and a large quantity of very rich decoration. The projecting nail heads, the curved surfaces and the irregular outlines make it a most effective decoration. The swords are equally faithful to the originals, and in one case even the corded handle is faithfully reproduced. The next pieces in order of importance are two enormous portrait shields, something like 40 inches in diameter. The borders of each of these are precisely alike and consist of a continuous design, representing ancient combatants fighting with axes, short spears, shields and daggers. At the bottom, for the design seems to be a continuous one, running all around in the comparatively narrow margin, two non-combatants are binding up the wounds of a soldier. The central heads are in both cases in very high relief. and the work, which was in the original *repoussé*, is very sharp and well drawn. One of the heads is that of Charles the Fifth, and the other King Edward the Third. The next piece, which, possibly, we should have classed with the armor, consists of a shaped panel which has evidently been a portion of some larger work. On the two legs of the panel a combat between mounted soldiers is going on, and the vigor of the action and the perfection of the workmanship would almost lead one to suppose that it was the work of the famous Benvenuto Cellini. At the centre two figures, evidently winged victories, are crowning the conqueror, who is represented simply by a large helmed hand, below which two captives are bound upon a trophy. We have not at hand the particulars in regard to the originals in these works, and consequently speak of them from memory and the photographs before us.

The next thing which attracts our attention is a large circular shield, which must be from a very ancient original. As a piece of "all round work" this is a curiosity, since, like a "round robin," it is necessary to see it from all sides in order to understand the design. The portion of it next you is right side up from any point you may approach. The centre represents a city in a state of siege, with the army surrounding it. Outside of this half of the shield represents an army encamped, and the remaining half represents an attack of men-of-war, of galleys and armed boats. These are all moving toward the centre of the shield, or at least the greater portion of them. The time is laid evidently in the latter part of the fourteenth century, the attacking party being well supplied with artillery, though of rather a primitive character. The diameter of the shield is about twenty inches. The shield has a very pleasing ornamental edge, broken up by a small flower introduced at every two or three inches. In this respect it is somewhat unusual, as in a great many cases the edges are left in a half finished condition, as though the article had either been cut out of its original setting or had been intended for a frame.

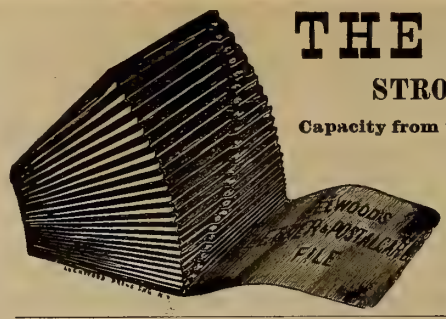
There are seven plaques, evidently of Dutch origin, all representing drinking scenes, and all have borders of fruits and flowers intertwined with ribbons, and though one is considerably larger than the others, still its border is identical with them in design. The central panel is well filled with figures, which are modeled not only with high relief, but with much boldness and clearness, and it seems almost a shame that so much ability should have been wasted upon designs so worthless. As decorations, however, the plaques will be very effective. There are two oval plaques which, both in modeling and design, are exceptionally beautiful. Each one consists of a satyr playing with a young one. The first of these is a female sitting upon a bench, holding up a bunch of fruit just out of reach of the young one sitting on her knee. In the other one, a male in a similar relative position, but reversed, is playing on a pipe, while the young one standing on the end of the bench reaches for the fruit hanging from the boughs of a tree which forms the margin and the background. These, we imagine, are both comparatively modern designs, but they are exceedingly good, and in some respects the modeling is very beautiful.

One of the best, and an exceedingly popular design at the present time, consists of a fire-dog. A ball, the upper half of which is ornamented with spiral figures, is supported on a vertical rod, from which the legs are carried. Such things are decidedly fashionable. We suppose they possess beauty, but we are sorry to confess that we don't see it. There are a number of little 6 and 8-inch medallions, of varying degrees of beauty and perfection, all of them, however, remarkably fine samples of workmanship, and eminently desirable for decorative purposes. Two, however, might be overlooked, and these are, we judge, pieces of French modeling. One consists of a tiger walking with the head down, and the other one in a somewhat similar position, with the head up, but facing in the opposite direction. The modeling of both of these is excellent, and although we do not know the artist's name, we have seen a great deal of his work, and think it is recognizable almost anywhere.

There are four rectangular panels containing each a large male figure, representing mythological subjects. The anatomy is wonderful, and when this has been said the whole story has been told. They might be characterized as escaped nightmares, embalmed in cast iron. The figures seem to have something heavy on their minds, and are endeavoring to get it out through every muscle in their bodies. There are a variety of small articles, one of which is a casting of a lacquered Japanese platter, which is quite remarkable for the perfect reproduction of the raised pattern on the surface. Finally, we have one very beautiful plaque and two very beautiful shields, which apparently came from the same designer. All of them are filled with undraped human figures. One of them is a mythological subject, another is the scene at the gate of a city, and the other a battle raging. We judge that the originals of these were made in silver. The delicacy of the figures, and, so far as we can judge, the perfection of the extremities would lead one to suppose that these were also the works of Cellini. It will be remembered that he was particularly careful with respect to the hands and feet of his figures. His method of work was to model the hand or foot in wax, take a cast of this, and then make a punch by which he was enabled to strike up a hand or foot with the greatest precision and delicacy.

It would hardly be possible to imagine that the delicate members to be found on these panels were proportioned any other way. The beautiful drawing of the figures themselves is something that must be seen to be appreciated. Even if an imperfect copy was all that could be obtained, a vast amount of pleasure would come from the study of them. Only one of these shields has a border, the other possibly has been cut from its original setting. This one, the most beautiful of any, is quite large. The subject of the smaller one is, as we have said, a battle. The scale of the photograph, however, is too small for us to speak of it in particular. Very many of the originals of these show the results of hard usage. This is the more to be regretted

since they were works of art in every respect. It is sad to think that in the days when *repoussé* work was practised in its perfection, that gold and silver were the only metals that were considered suitable for it. The consequence of this has been that in after days, when kings and nobles were pressed for money, many works of art were melted for the sake of the bullion. This was all the more unfortunate, because the value of the silver was vastly less than that of the work itself.



Experience has shown the folly of using precious materials upon which to bestow the highest labors of our artists. It is far better to perpetuate such works in some base metal whose value is nothing at all, than to use a more precious metal which might tempt the cupidity of the melter. Works executed in clay, in stone, and upon canvas have often been pawned to raise funds, but never destroyed for that purpose. It is said that the finest and best works, of not only Cellini, but of other artists, have been put into the melting pot, and that comparatively few of these are left to us. These examples are remarkably encouraging, as showing a great step in advance in the use of cast iron, but we are free to confess that we expect to see another step taken which shall in every respect leave these as far behind as they have left the stove plates which went before them.

We see no reason why cast-iron work cannot be made as clean and sharp and beautiful as that obtained by the compression bronze process. It seems to be pretty well established that cast iron can be made to flow with any requisite degree of fineness, and that the only obstacle in the way of this improved work will be the obtaining of a mold which will give a perfect surface. When this is done, cast iron can be made to give us, for a vast variety of art objects, a perfect basis upon which to deposit our electroplating. It is only necessary to exercise a little extra care in order to obtain a coating on cast iron which will enable us to use it for external decorative work in the place of bronze or brass. Its vastly cheaper price, of course, will open an immense field for it.—*Metal Worker.*

THE "NICKEL-PLATED LINE."

While the fresh and vigorous enterprise displayed by the "coming line" (N. Y. C. and St. L.) has excited considerable apprehension in railway circles, the general traveling and shipping public seems well prepared to welcome it according to its deserts. Surely there is room for another East and West "great trunk line," but there is just as surely room only for one first-class in every respect, and withal courteous, accommodating and liberal, as well as ambitious and enterprising. The following bit of news from a daily contemporary seems to indicate a step in the right direction: "The New York, Chicago and St. Louis Road are already working vigorously for business. Henry Monett, the general ticket agent, has sub-agents in New York busily engaged in securing contracts from theatrical managers for carrying companies on their Western tours this fall. A considerable number of contracts have been made This line of business is important to the railroads, as, in addition to the money earned, a good deal of free advertising is gained. The Lake Shore Road has lost the theatrical business almost entirely by refusing to make favorable terms to the companies. October 1 is the date now set for opening the road for business.

He who waits to do a great deal at once will never do anything.

BYRON WESTON

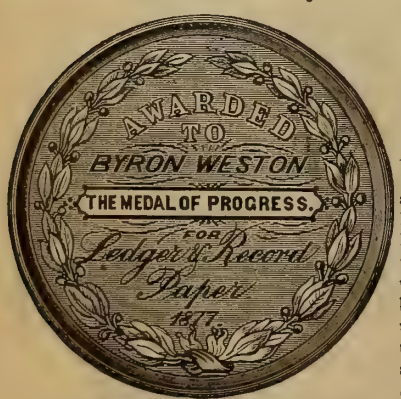
DALTON, MASS., U. S. A.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection



At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot. Each sheet is water-marked with name and date.**

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. XII.---NO. 8. NEW YORK, AUGUST 24, 1882. WHOLE NO. 374.

Correspondence.

PHILADELPHIA NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA OFFICE OF THE LOCKWOOD PRESS,
150 South Fourth Street,
PHILADELPHIA, August 22, 1882.

Philadelphia is the central point for a number of leading manufacturers of steel pens, and you can understand what curiosity has been excited by the letter signed "M.," and published in THE AMERICAN STATIONER of August 3.

Turner & Harrison were the first to ask (see STATIONER, August 10) your correspondent to name the manufacturer who is guilty of short counting. Warrington and Esterbrook, who are also much esteemed in the trade, have a great desire to know and a great interest in knowing the name of the delinquent. We looked for THE STATIONER of the 17th with impatience, hoping to find in it some explanations which seem to be necessary, but were disappointed.

"M." ought to understand that he is wrong in making a charge and permitting an unjust suspicion to rest upon the houses I have named, and which are known for their integrity. I only echo the voice of your readers here in asking "M." not to delay in making his statements definite. J. VIENNOT.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., August 22, 1882.

With the ebbing of the wave of heat, the return of the prophetic breeze, the gathering of the clouds, and the autumnal feeling in the early morn, the indications of a return of trade are decidedly strong and unmistakable. The summer "vacation" season is practically over, and now people are going to attend to business again. 'Tis well.

Stationers report a good feeling all round, and a disposition on the part of buyers to order goods liberally but not excessively. It is felt in the air that the fall trade will exceed in volume even that of last year, and there is no reason why it should not be so. It will be remembered that last spring's trade was somewhat broken up and that dealers generally neglected to stock up, or bought just enough to keep up assortments and meet immediate wants.

The country was never in a better condition for a full fall trade than it now is, and if the stationers do not get their share of it, it will only be because general business can get along without stationers' goods.

Talks with various dealers lead me to believe that there will be a scarcity of money for a few weeks, but this will make no difference with the stationers. The scarcity of money, however, for a short time will have its compensations in the shape of a big crop movement, bringing with it plenty of money and cheerfulness.

Accounts from the interior generally agree that there is plenty of money among the farmers not in the large towns and villages, and that trade is in a satisfactory condition.

The city and near-by retail and jobbing trade has been very good during the past week, or since the backbone of the heated term was broken. There is also a noticeable call for nice goods—but there will be no trouble in meeting this demand. The time has gone by for cheap goods—that is, goods made from cheap materials. People have more money now to spend on good goods than they had several years ago.

Our importers are not doing a very heavy business as yet, although it is about time that they had given their orders in that direction. Not a few of the heavy dealers here think they can make about as much money in the end by going to New York for English, French and German goods. The importations into Boston, however, of heavy goods has been double in value that of the exports for some weeks past, but stationery and fancy goods do not run heavily.

The manufacturers of art novelties continue to report a splendid business—even larger than that a year ago this time. The leading ones expect to be taxed to their utmost until after the holiday season. There will be an unusual demand for low-priced work, also for fancy business devices.

There is little or nothing worthy of note in the personal line this week. Everybody is looking well and ready for immense business exercise.

The show windows of the stationers are looking especially wealthy in goods just now, and much artistic taste is displayed in arranging them.

There have been quite a number of business calls from New York gentlemen during the week. All report a healthy feeling. L.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, O., August 21, 1882.

The Exposition is all the talk. Cincinnati has been famous for inaugurating and carrying to a successful issue great public enterprises of this sort. Out of a German Sängerfest grew Cincinnati's first great exposition. This was followed by a series of displays given annually, each eclipsing its predecessor. New permanent buildings became a necessity, and they have been erected and are among the distinguishing architectural features of the city. Out of the expositions and exposition buildings grew our world-renowned May musical festivals and our College of Music and our great dramatic festival, which is to be next May, and our Art Museum, with its million or more dollars of endowment, the foundation for an edifice for which is to be laid this fall. Out of these expositions grew all of the great expositions in all of the great cities of the West, Northwest and South.

These Cincinnati expositions furnished the suggestion for the great Centennial Exposition at Philadelphia, and they furnished the Centennial a trained director-general, A. T. Goshorn, a native Cincinnatian, who obtained all his exposition experience in Cincinnati. There is no city in the country that can boast as many men capable of conducting enterprises like music festivals, opera festivals, and expositions to a successful issue as Cincinnati.

If there is any other city so well provided in this respect, why doesn't it show its resources? Is there any other city in the world that has seated even two thousand people at a banquet in one building without a jostle or jar of confusion? Cincinnati did that in March, 1880, when the new Southern Railway poured in two thousand guests from the South on the great excursion on the first through trains that traversed that road from South to North. If this is boasting it is the sort which is done by letting facts speak. The coming Exposition will be in all respects the most brilliant of the series. There can be no mistake about that. The country is rich with abundant harvests, and people have been too busy this year for excursions. They are just in the humor for traveling now. Besides all this, there is the infallible indication already of an immense attendance, an immense number of entries for premiums and for exhibition. By changes in the rules, articles not enumerated in the premium lists are admitted for competition.

Arrangements are perfected for an immense display of specialties. The tanners will show all the process of tanning that can be exhibited in such a place. A shoe factory, with a complete run of hands and machinery, will be operated. The manufacture of silk, embracing every process, from the hatching of the worm and feeding it to the turning out of a woven fabric, will be exhibited. These are only a few of this sort of attractions, which will characterize the display. On the opening day there will be an immense symbolical display representing by allegory the history of this nation and this city by way of a procession of emblematical cars,

twenty-seven in number, following each other chronologically. These have been gotten up by voluntary contributions of citizens, at an expense little short of $7,500 or $10,000, to usher the event in. This is the tenth exhibition of the series. It commences on September 6 and ends on October 7. The managers, called commissioners, are appointed in equal numbers from the Chamber of Commerce, Board of Trade, and Mechanics' Institute. They serve without pay or emolument. Clerical work, and police and gate-keepers, and the like, are paid for. There are no other expenses except the necessary lighting and preparing the buildings for the Exposition.

Business in the stationery line is brisk. Very generally the manufacturers are behind with their orders, and the rush keeps coming. There is every prospect for a driving fall trade at good prices. Stationers who have laid in a large stock of archery goods would be willing to part with it on reasonable terms. They are dull sale.

The demand for birthday cards continues brisk. W. H. Poundsford & Co. have a line of beautiful little hand-painted sketches on miniature easels which are finding a ready sale. They have also a good market for fancy miniature beveled glass mirrors.

Robert Clarke & Co. have a fine window exhibit of birthday chromos, and they find unabated call for them.

John Holland is East rusticating, and so is Charles Stewart. Neither will remain away long.

W. B. Carpenter & Co. will go into the Exposition with blank-books, for exhibition only; also, with one of their celebrated envelope machines, which they will keep at work.

Chatfield & Woods report business fair. They never complain and seldom go into ecstacies. It takes boys for the last-named caper; the old soldiers are steadier.

Louis Snider's Sons are happy even to smiling over the life that is in their trade. Their run into Southern territory is gratifying them very much.

Samuel Tatum, with his corner, as it were, on letter presses, is having it about all his own way, and a very pleasant way it is too!

Recent visitors in the trade are Mr. Skinner, of Buxton & Skinner, St. Louis; W. T. Hicks, of Geo. Hurd & Co., New York; J. G. Stafford, of S. S. Stafford, New York; W. L. Marks, of Dixon Crucible Company, New York; C. L. Ware, Springfield Printing Company, Springfield, Mass.; Mr. Dewey, of White, Corbin & Co., Rockville, Conn. PRINCE WILLIAM.

TORONTO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., August 19, 1882.

It may interest some of your readers to know that the habitans of this broad Dominion have been able to live for quite a number of weeks now without any fire in their cabins, either in the morning or evening. The thermometer has been sporting around anywhere between 80 and 104 in the shade—the latter at Winnipeg. If this is not hot enough to suit the average mortal, he must be a salamander.

There is a boom in the excursion business. Our streets are crowded day after day with excursion parties, and some days a half-dozen, mostly from the United States, as far South as Tennessee, Georgia, &c. On Friday there was a party of about five hundred from Indianapolis, $5 the round trip, hash and sleeping-cars not included.

Barber & Ellis gave their employees an excursion and picnic to Youngstown Grove, Niagara, on Friday last. The party (about 200), including some friends of the firm, among whom the writer figured in a quiet way, embarked on the fine steamer Chicora at 7 A. M., and steamed across the lake thirty-six miles, arriving at their destination at 10½ o'clock. The beautiful grove soon became a scene of hilarious enjoyment. In due time a tasteful spread, *a la* picnic, invited the serious attention of the company, and seemed to be thoroughly appreciated, after which came dancing, games, &c., all of which was entered into with a heartiness truly enjoyable. At 5½ P. M. the steamer called, and landed us in the city at 8½ o'clock. The day was all that could be desired. Employers, friends and employees were delighted with the day's enjoyment, to which the sail of upward of seventy miles in the lake largely contributed. This kind of thing is not new with this firm and other of our city houses, and is a generous way of giving expression to the interest felt by the heads of firms in the well-being and happiness of the busy hands daily toiling for them, which is fully appreciated.

P. J. Day, of Guelph, one of our most pushing and successful booksellers and stationers, called on me to-day, and after the usual crack about business, &c., on leaving intimated that he would like to get THE AMERICAN STATIONER. I am sure you will be delighted to oblige him, as well as other of my Western friends, who, I am sure, are under conviction that they should do likewise.

James Macdonald, of John Walker & Co., London, Eng., afforded me the pleasure of a private inspection of his *recherché* range of samples. I was surprised to find such a variety of rich and expensive goods in leather, ivory, &c., and thought them too expensive for our market. But Mr. Macdonald informed me that he found the taste of the country and the demand for rich goods developing each year. It speaks well for the house that it is able to cater to the educated taste of the rich as well as the educated taste of those who are not rich, and furnish lines of strictly legitimate trade articles, not only chaste in design, but moderate in price. We have heard of extravagance in Christmas cards, but this firm certainly goes way beyond any previous conceptions we had on this point. Its souvenir sets of etchings on ivory are most exquisite. They consist of four ivory cards, with beautiful etchings of English, Canadian and American scenery, inclosed in a richly decorated case. The ivory series of cards throughout is certainly "simply exquisite."

Walter King, of the widely known firm of Collins, Sons & Co., London and Glasgow, also exhibits a wide range of samples. His Bibles and prayer-books have an enviable reputation, and as specimens of clear, neat typography and chaste, artistic binding, they cannot be excelled. Another noticeable feature is a choice line of olive wood goods, comprising writing desks, inkstands, &c., very attractive; also leather goods in writing cases, pocket-books, purses, &c., beautifully finished. In staple stationery the firm has a very large export trade, and shows a great variety. Mr. King has had a most satisfactory summer trip.

Copp, Clark & Co. have purchased the entire stock of Nesbit, Byron & Co., and have assumed the late firm's liabilities, which are to be paid in full. C. H.

A very pretty amusement is the taking of leaf photographs. One process is this: At a druggists get an ounce of bichromate of potassium. Put this into a pint bottle of water. When the solution has become dissolved as much as it will, pour off some of the clear liquid into a shallow dish; on this float a piece of ordinary writing paper till it is thoroughly moistened. Let it become dry in the dark; it should be of a bright yellow. On this put the leaf—under it a piece of black, soft cloth, and several sheets of newspaper. Put these between two pieces of glass (all the pieces should be of the same size), and with spring clothes-pins fasten them together. Expose to a bright sun, placing the leaf so that the rays will fall as nearly perpendicular as possible. In a few moments it will begin to turn brown; but it requires from half an hour to several hours to produce a perfect print. When it has become dark enough, take it from the frame and put it in clear water, which must be changed every few minutes until the yellow part becomes white. Sometimes the leaf veinings will be quite distinct. By following these directions it is scarcely possible to fail, and a little practice will make perfect.

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

☞ ANNOUNCEMENT. ☜

WE beg leave to announce the completion of our line of CHRISTMAS and NEW YEAR CARDS for the Season 1882-1883, for which our Agents will commence to solicit orders in May. We feel confident that the popularity which our Cards have enjoyed in former seasons will again be secured by the efforts we have made to bring out a line in advance of all our previous productions. The names of the Artists who have contributed designs is proof of our continued efforts to reach the highest excellence. We will name only the following:

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,

MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

Due regard has again been paid to the literary matter in connection with the designs, and many of the latter are accompanied by original poems, from writers of note, such as MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

Fringed Cards—All furnished with envelopes and protectors.
Envelopes—Furnished without extra charge for all cards for which the list price is $1.80 and over.
Backs have been specially designed for our cards, adding an attractive feature to them.

Bird Cards, by Miss F. Bridges, Mrs. O. E. Whitney and others
Figure Cards, by Miss L. B. Humphrey, Miss Rosina Emmet, Miss L. B. Comins, Alexander Sandier and others.
Flower Cards, by Mrs. O. E. Whitney and others.
Fan Cards, by Mrs. O. E. Whitney, in new styles.

PRANG'S PRIZE CHRISTMAS CARDS.

THIRD COMPETITION

FIRST.—Artists' and Popular Prize Card ($2,000), by Miss Dora Wheeler,

PUBLISHERS OF AND WHOLESALE DEALERS IN

Games and Home Amusements,

No. 41 JOHN STREET,

New York, August 23, 1882.

THE Trade are hereby notified that the undersigned have and claim a trade-mark to the words "Sliced Birds," "Sliced Animals" and "Sliced Objects," when applied and used with reference to the sale of games or puzzles consisting of slips or pieces of paper or card-board, which, when arranged and placed together will portray or show birds, animals or objects, and at the same time by the lettering on the ends of such slips, or pieces of paper or card-board, will indicate the bird, animal or object thus portrayed; and the undersigned further claim a trade-mark to the boxing or packing of such slips of paper or card-board, and to the labels which they now use, and have heretofore used in their business, and placed on the boxes in which said games or puzzles are contained; and the undersigned furthermore claim a trade-mark in and to the use of the words "Anagrams, or words alive," when applied to certain games or puzzles, made up of pieces or squares of card-board, with letters printed thereon, together with the label heretofore and now used by them, and placed upon the boxes in which said pieces or squares of card-board are contained.

And they are hereby warned and notified that **they will be held liable in damages** for any infringement of such trade-marks, or labels, **and that the sale of any of such articles,** bearing such trade-marks or labels, or imitations thereof, except such as are made and sold by us, **will constitute an infringement.**

MACKINNON PEN COMPANY,

MANUFACTURERS OF

The Mackinnon Iridium Pointed Fountain Pens.

Patented July 21, 1876; reissued July 15, 1879; Patented January 21, 1879, July 29, 1879.

AND THE

AMERICAN STYLOGRAPHIC PENS,

Patented July 21, 1876; reissued July 15, 1879, July 29, 1879, March 23, 1880, August 31, 1880.

OFFICE, No. 192 BROADWAY (corner John Street), NEW YORK, U. S. A.

PRICE LIST:

Short, plain,	$4.00	Long, plain,	$4.50	Plain Pocket,	$4.50
" mounted,	4.50	" mounted,	5.00	Mounted Pocket,	5.00

THE MACKINNON PEN is a practical Fountain Pen, and is made of the best and most durable materials. a conical tube of gold, tipped with a circle or bored grain of IRIDIUM, makes the writing point. (The valve needle which rests more lightly on the paper when writing, is also tipped with Iridium.)

AMERICAN STYLOGRAPHIC PENS.

Short, plain,	$2.00	Long, plain,	$2.50
" mounted,	2.50	" mounted,	3.00

These Pens are in every respect, except the Iridium Points, as well made as the Mackinnon Pens.

PATENT IMPROVED NEEDLE-ADJUSTING AND CLEARING DEVICE.

The Needle can be adjusted to suit any hand.

The Needle can be made to clear itself of dirt, &c.

A. POINT COVER.
B. VALVE NEEDLE.
C. IRIDIUM WRITING POINT.
D. VALVE CHAMBER.
E. AIR OUTLET.

F. AIR TUBE. Which supplies air to take place of Ink used. This must be kept free from Ink. Blowing through from top will sometimes start Pen if it stops.

G. HOLDER. Containing Ink, which is filled at joint, with Valve Chamber D, shown partly open. Any good Ink may be used. Wash out if it clogs.

H. AIR CAP, with Air Inlet I. This must be opened before taking off Point Cover, or unscrewing Ink Joint. Kept open when in use, except only when washing or shaking.

The MACKINNON PEN COMPANY claim that all other Stylographic Pens are infringements of their Patents. No claim is made that the Company infringes the rights of others.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Cyrus Carsen, stationer, &c., Philadelphia, Pa., is dead.

J. D. Beals, newsdealer, &c., Sterling, Kan., has sold out.

Maggie G. Baker, stationer, Philadelphia, Pa., has been sold out at auction.

Henry S. Shull, bookseller and stationer, Wellsville, Ohio, has sold out.

Goodman & Schanck, dealers in paper and cards, New York city, have dissolved partnership.

A receiver has been appointed for O. P. Wharton & Co., publishers of the *Free Press*, Youngstown, Ohio.

Alford B. Benedict has been admitted to the firm of L. C. Woodruff & Co., wholesale paper dealers, Buffalo, N. Y.

Sackett, Wilhelms & Betzig, lithographers, New York city, have formed a limited partnership, with special capital of $15,000, to September 1, 1887.

The firm of Nash & McKaig, publishers of the *Independent*, Stockton, Cal., has been dissolved by the retirement of E. L. Nash. C. C. Cummings has been admitted.

W. W. Roberts, late of Dresser, McLellan & Co., announces that he is in the employ of Aurin L. Dresser & Co., Portland, Me., and will continue to make his usual trips on the road.

C. Jourgensen, manufacturing stationer, 98 Maiden lane, announces that J. H. Travis, thirteen years with the Jordan Stationery Company, and T. Jay Marcellus, late of Brooklyn, are engaged as travelers for him.

J. H. Bufford's Sons have this week added several series of new folders, which are richly illuminated with landscapes and marine and other scenes. They are intended for orders of dance. This house is making wonderful strides in the art-publishing line.

Dresser, McLellan & Co., Portland, Me., have dissolved partnership. E. S. E. McLellan and William W. Roberts retire, and the business will in future be conducted by Aurin L. Dresser, who retains the good-will of the late firm, under the style of Aurin L. Dresser & Co.

Gross & Voight, importers of and dealers in toys, No. 8 Strawberry street, Philadelphia, had their stock entirely destroyed by fire on Thursday night of last week. The firm had just begun laying in its more costly Christmas goods from Germany, and the stock already amounted to $40,000. The firm has an insurance of $18,000.

The illustrated catalogue of the Embossing Company, Albany, N. Y., is an artistic production of no mean order. The front page of the cover is beautifully engraved on steel, while the interior of the book is printed in colors and gold. All of the illustrations of the various goods, which comprise alphabet, checker, spelling and building blocks, are printed in natural colors, and these are of the choicest kind, brilliant and wonderfully effective. Great care and much expense must have been bestowed upon this excellent catalogue, the equal of which is seldom seen.

McCarty & Hasberg have just received a communication, dated August 1, from their representative in Holland, announcing that the first shipment of "curios" would leave Europe in a few days. The collection contains some rare specimens of works of art and antiquities, which come mostly from the smaller towns of Europe. The firm has gone to considerable expense in getting together this collection, and in doing so has displayed great enterprise and business tact. The representative referred to says that he has found some good things at very low prices, which will enable the firm to dispose of them here at reasonable rates. A second shipment is expected about November 1; it will come from some more Easterly point. This is a new enterprise with this house, and from the present outlook the collection will be likely to astonish the trade. These selections, together with the extensive ones taken from the regular markets of Europe, ought to be the largest and finest display of goods ever seen in this country. The trade are generally invited to call and inspect the firm's lines.

Henry Levy & Son have received by recent steamship arrivals a large quantity of elegant fancy goods for the fall trade. Among them are specially noticeable fine model wax dolls that can be retailed at 50 cents and $1 each, and leave a fair profit for the dealer; fans in ebony, ivory, bone, olive, and perfumed wood handles, artistically ornamented with embroidery and paintings; toilet ornaments in bronze, gilt glass and china ware, and a large quantity of bric-a-brac ornaments, which will be offered to the trade at popular prices.

L. Prang & Co. report that the demand for their fall goods is larger than ever, and that they are very busy getting up their stock; consequently they expect to have their fall lines ready much earlier than usual and to be in a position to begin deliveries by about September 15. The factory is kept running to its fullest capacity to turn out goods enough to fill all of their first orders in one shipment. Early orders are requested to enable the house to carry out this project.

Charles Taber & Co., New Bedford, Mass., and Bond street, New York, have forwarded a copy of their new catalogue, which contains 136 pages of illustrated details of their mats, passepartouts, frames, photographs, &c.

A building on Water street in Pittsburg, Pa., occupied by Mr. Sunshine as a rag warehouse, was partially destroyed by fire on Saturday night. Loss fully covered by insurance. The cause of the fire is unknown.

The St. Louis Paper Company has issued its pocket catalogue for August. The catalogue contains sizes and prices of paper, with a code of telegraph cipher.

The Crabbs, Bollman & Huewe Manufacturing Company, manufacturer of paper buckets, Dayton, O., has been dissolved by the retirement of B. F. Crabbs.

Moses Hamburger, commission dealer in notions, Philadelphia, Pa., was burned out on the 18th instant. He was fully insured.

Howard Jenkins, newsdealer, Hyde Park, Mass., who recently failed, will not reopen. Liabilities, $800; assets, $300.

G. Luscher, dealer in notions, Blackville, S. C., has been succeeded by his wife, Marie Luscher.

H. K. White has bought out C. J. Barnard, paper manufacturer, Suffield, Conn.

W. T. Sawle, printer and publisher, Caledonia, Ont., has sold out.

J. C. W. Bailey, printer, Chicago, Ill., is dead.

M. Morris, dealer in notions, Norway, Mich., has sold out.

Al. Du Toit, publisher of the *Herald*, Chaska, Minn., is dead.

T. W. Collier, publisher of the *Sunday Herald*, Columbus, Ohio, has sold out.

Alfred Mudge, of the firm of Alfred Mudge & Son, printers, Boston, Mass., is dead.

Stubbs & Limbeck succeed Stubbs & Roth, booksellers and stationers, Chrisman, Ill.

G. S. Stoddart & Co., dealers in paper stock, New York city, have made an assignment.

G. R. Davis & Co., stationers, &c., Omaha, Neb., has been succeeded by Davis Brothers.

Duffy, Cashman & Co., printers, Boston, Mass., have had their stock damaged by fire. Insured.

Albert W. Ames, bookseller, newsdealer, &c., Ann Arbor, Mich., has sold out to Willis Boughton.

Dufield Brothers, publishers, Woodstock, Ill., have dissolved partnership. J. A. Dufield succeeds.

M. & W. Himelhock, dealers in fancy goods, Caro, Mich., have dissolved partnership. Each continues.

E. &. H. T. Anthony & Co. have this week placed on the market new cabinet pictures of Mrs. Langtry.

Dickinson & Mayo, paper dealers, Springfield, Mass., have dissolved partnership. A. N. Mayo & Co. succeed.

Some of the hand-painted cards that Myers Brothers are now receiving from Europe are exquisite, and deserve the attention of parties dealing in fine goods.

Allen Brothers' paper mill at Sandy Hill, N. Y., was partially destroyed by fire on Saturday evening, July 19. The loss is estimated at $20,000. The origin of the fire is unknown.

Henry Friedman, morocco and leather case manufacturer, 186 Wooster street, this city, was burned out on Thursday night of last week. Mr. Friedman loses on stock $7,000; fully insured.

F. W. Klemm, of L. Prang & Co., is spending his vacation in this city, and is doing all of the favorite watering places daily visited by the Gothamites. He is having a general good time and seems to enjoy it heartily.

L. Prang, of L. Prang & Co., and wife, are spending this week in this city. The principal object of their visit was to meet their son-in-law, K. F. Henizen and his wife, who were expected yesterday, per steamship Gellert, from Europe.

The creditors of Thomas F. Palmer, fancy goods dealer, San Franicsco, Cal., have appointed a committee to take charge of his affairs. He owes about $15,000, and his assets are valued at $12,000. Application was afterward made to force him into insolvency, and A. Heynemann was appointed receiver.

L. Prang & Co. are making large additions to their line of birthday cards, and some unusually fine specimens, both on paper and satin, are in course of preparation. Samples of these will be ready before September 1. The attention of dealers is especially called to this beautiful line of goods. In Sunday-school text cards some very pretty novelties are being produced, several of which will be ready soon. The line of Prang's plaques has also been largely increased by the addition of many new designs, and it now consists of about forty different ones, ranging in price from $2 to $6 each, retail. These goods are

artistically finished, and they are not to be broken like those made of china.

R. H. Pickett, printer and stationer, New Haven, Conn., has assigned.

Sutton & Glenn succeed Barrett & Sutton, publishers of the *Herald*, Hartford, Ky.

Gastonguay & Vaillancourt, booksellers and stationers, Quebec, have been burned out. Insured.

George C. Boorum, of Boorum & Pease, is taking a few days' recreation among his friends at Shelter Island.

H. Griffin & Sons, dealers in bookbinders' materials, 54 and 56 Duane street, reports a very good trade in progress.

Mr. Van Horn, of the Chapin Paper and Pulp Company, 51 John street, has just returned from a very successful trip in the West.

Henry L. Booraem, secretary of the Stationers' Board of Trade, is taking a vacation of about ten days at Richfield Springs, N. Y.

Henry Bishop, of the Hecla Card and Paper Company, Springfield, Mass., is in the city this week, attending pretty closely to business.

E. P. Donnell & Co., Chicago, manufacturers of improved machinery and tools for bookbinders, printers, and paper-box makers, are very busy and are increasing their manufacturing facilities so as to keep up with orders.

George A. Raisbeck is taking a much needed vacation at Sparrowbush, Orange County, N. Y. He went away well provided with fishing tackle, and will, no doubt, be able when he returns to relate some prodigious fishing adventures.

The contents of the September number of *Our Little Ones* are as varied, the simplicity and purity of the reading matter as perfect, and the illustrations as excellent as usual, which is awarding the highest praise possible.

W. J. Dow, who for six years was with A. & E. Wallach in the capacity of Western traveler, is now engaged for the same purpose by Nathaniel Bloom, 473 Broadway, and expects to be on the road shortly with a fine line of novelties.

C. E. Hopkins, with Liebenroth Von Auw & Co., who has been suffering from a severe illness for some time, is now convalescent, and expects to be on the road soon. For several weeks he has been enjoying the pure air of the Catskills, which benefited him greatly.

C. I. Hood & Co., apothecaries, Lowell, Mass., proprietors of Hood's Sarsaparilla, have issued a series of four chromo placques. The designs of all are pleasing; the coloring of three is perhaps a little garish, but one, "The Monarch of the Glen," if old in design, is excellent.

Bristol & Smith, booksellers and stationers, Utica, N. Y., announce that they have established a branch house at St. Paul, Minn., under the style of H. M. Bristol & Co. The new concern will be ready for business about September 1, and will be under the supervision of Mr. Bristol.

The American Crayon and Slate Company report business very good in all of its lines of goods. Its new dustless crayons are selling largely. It will have in a few days a full supply of soapstone pencils, of which it has been short for the past two months. Its school-bag trade is largely increasing.

Obpacher Brothers have patented one of their novelties, styled the "Gem Palette," designed by Samuel Garre, and which has been previously referred to in THE STATIONER. It is a beautiful article, richly and tastefully made, and it will, no doubt, meet with much favor. Among other card designs recently introduced by this firm are two numbered 595 and 645. The former shows the bust of a young girl with an angelic face, to which the artist has given an ideal beauty. No. 645 shows six varieties of cactus, through which humming-birds, with the richest plumage, are flitting to and fro. The firm offers a beautiful line of satin bannerets, which are richly embellished in novel and unique styles, and uses this season five styles of fringe. It also shows an extensive line of calendars. The trade are invited to call and examine the firm's line.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, AUGUST 24, 1882.

Advertisements cannot be received for insertion in he current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE correspondent of THE STATIONER at Cincinnati gives a glowing account of the promise of the Exposition to be opened in that city next month. There will, doubtless, be a very interesting lot of exhibits, and the interest will be enhanced if the stationery trade give their aid in supplying the material for enlarging it.

IT cannot be disputed that there is a fair trade doing, and that it will develop largely. Some of the visiting buyers have had to carry over more of their spring stock than was expected, and are buying carefully. It is just as well that buyers should not be lavish in their orders, but in view of the promise the trade should try and be sufficiently supplied.

THE fifty-first annual industrial exhibition of the American Institute will be opened in this city on September 27. The managers are anxious to show the processes as well as the products of manufacture, and promise unusual facilities to those who will take advantage of their offer. As the American Institute during a long period of years has set a laudable example in providing the means for exhibiting, and thereby increasing the manufactures of the country, we hope that this occasion will be taken advantage of by manufacturing stationers, and that additional interest will be given to the exhibition by the display of the methods of production.

THE grand opening of the second annual exhibition fair of the New England Manufacturers and Mechanics' Institute will take place at Boston on September 6. This is another of the great exhibitions of industrial progress which it behooves manufacturers to take advantage of. One of its special features will be the exhibits from the Southern States. We note that at a meeting lately held in Richmond the manufacturers of Virginia were urged to make exhibits at this fair. It is to be hoped that they will, and that all sections of the country will unite to make this and the other important exhibitions about to be held remarkable for representations of industrial art and progress.

THE complaint of short count in pens has attracted attention, as was expected. It is not our intention to precipitate charges against anyone, nor do we want it to be understood that, because we do not mention names, any of the firms spoken of by one of our correspondents is in fault. But this much we will say, that the subscriber who first called attention to the short count in pens has taken pains to count the pens in the boxes of three different makers, and has sent to us the results of his count with the names of the manufacturers. In two instances the quantity was short from one-quarter to three-quarters of a dozen, and in one case the count showed an excess. We shall invite the manufacturers' attention to the facts and see if there is a proper explanation. We have heard one reason suggested, which it seems to us may account for an occasional slight shortage, but do not think that there should be a deficiency as a general thing. If any other readers of THE STATIONER who are interested will take the trouble, and, like our correspondent "M.," send us the results of their count, with the brand of the pens and the names of the manufacturers, we shall be better able to judge how uniformly the sending out of pens "short count" is practised.

ANSWERS TO CORRESPONDENTS.

C. H. E. asks: "Where can Philibon's combined day-book, cash-book and ledger (D. E.) be found?"

Ans.—We don't know and cannot find anyone who knows anything about it. We are told that Philps & Solomon, Washington, D. C., make a combined book of the kind mentioned.

F. H. D. & Co. want to know the "best marking ink for linen that can be used with any stylographic pen."

Ans.—We do not know of any marking ink that can be used with the stylograph. The indelible inks are generally too thick, and the makers of the pen think that there is none that can be successfully used.

P. S. asks: "1. Who makes Mathews' memorandum books and fillers. 2. Who manufactures nickel-plated stationers' shears? 3. Where are headquarters for Woostenholms's erasers?"

Ans.—1. They were made by Mr. Mathews, of New Albany, Ind., but he is reported to have sold out. The J. G. Shaw Blank-book Company, New York, claims to make them, and every blank-book manufacturer makes something similar. 2. Wiebusch & Hilger Hardware Company, 84 Chambers street, New York, and, we believe, the Meriden Cutlery Company, Meriden, Conn. 3. Asiline Ward, 29 Chambers street, New York, is agent and takes import orders; Herman Boker & Co., 101 Duane street, New York, and Curley Brothers, corner Beekman and Nassau streets, New York, keep them in stock.

J. W. R. & E. want the names of manufacturers of school straps.

Ans.—S. Scheuer & Son, 72 Franklin street, New York, and a party in Brooklyn whose name we have not been able to get, but whom we will hunt up for you and advise.

INQUIRIES.

G. & W. say: "Will any of the Philadelphia readers of THE STATIONER inform a subscriber where any of the 'catchword indexes' made by the firm of J. B. Smith & Co., (now extinct) can be found?"

OBITUARY.

MAX A. EBERT.

Max A. Ebert, who has been employed for a number of years past as bookkeeper for Koch, Sons & Co., died at Mount Vernon, New York, on Monday night, of consumption, aged about twenty-eight years. Mr. Ebert had been in ill-health for several years. Although unable to attend to business, the firm esteemed him so highly that it continued his salary and sent him to Florida on two different occasions and subsequently to Europe. He was much thought of by his employers and all who knew him, who esteemed him for his good qualities. He leaves a widow and one child. His funeral took place yesterday, and was attended by a number of his friends. The interment was at Woodlawn Cemetery, this city.

JACK CADE AND PAPER MAKING.

With reference to any particular time or place at which the invention of paper making was first adopted in England, all researches into existing records contribute little to our assistance. The first paper mill erected here is commonly attributed to Sir John Spielman, a German, who established one in 1588, at Dartford, for which the honor of knighthood was afterward conferred upon him by Queen Elizabeth, who was also pleased to grant him a license "for the sole gathering for ten years of all rags, &c., necessary for the making of such paper." It is, however, quite certain that paper mills were in existence here long before Spielman's time. Shakespeare, in the second part of his play of "Henry VI.," the plot of which appears laid at least a century previously, refers to a paper mill. He introduces it as an additional weight to the charge which Jack Cade is made to bring against Lord Saye. "Thou hast most traitorously corrupted," says he, "the youth of the realm in erecting a grammar school; and whereas, before, our forefathers had no other books but the score and the tally, thou hast caused printing to be used, and, contrary to the king, his crown and dignity, thou hast built a paper mill."

An earlier trace of the manufacture in this country occurs in a book printed by Caxton, about the year 1490, in which it is said of John Tate—

Which late hathe in England doo make thys paper thynne.
That now n onr Englyssh thys booke is printed inne.

His mill was situated near Stevenage, in Hertfordshire, and that it was considered worthy of especial notice is evident from an entry made in Henry VII.'s Household Book, on the 25th of May, 1498—"For a rewarde geven at the paper-mylne, 16s. 8d." And again in 1499—"Geven in rewarde to Tate of the mylne, 6s. 8d."

Still, it appears far less probable that Shakespeare alluded to Tate's mill (although established at a period corresponding in many respects with that of occurences referred to in connection) than to that of Sir John Spielman. Standing as it did in the immediate neighborhood of the scene of Jack Cade's rebellion, and being esteemed so important at the time as to call forth the marked patronage of Queen Elizabeth, the extent of the operations carried on there was calculated to arouse, and no doubt did arouse, considerable national interest; and one can hardly help thinking, from the prominence to which Shakespeare assigns the existence of a paper mill (coupled as such an illusion is with an acknowledged liberty, inherent in him, to transposing events to add force to his style, and the very considerable doubt as to the exact year in which the play was written), that the reference made was to none other than that of Sir John Spielman's establishment of 1588, concerning which we find it said—

Six hundred men are set to work by him,
That else might starve or seek abroad their bread;
Who now live well, and go full brave and trim,
And who may boast they are with paper fed.

Understanding that fifty years since it was asserted by the then occupier of North Newton Mill, near Banbury, in Oxfordshire, which at that time was the property of Lord Saye and Sele, that such was the first erected in this country, for the manufacture of paper, and also that it was to that mill Shakespeare referred in the passage just quoted, I communicated with Lord Saye and Sele as to the plausibility of the supposition; remarking at the same time, as I would now, that although it was of course quite impossible to award the immortal bard credit for chronological accuracy, it must, I thought, be admitted that so marvelous an invention, unless really in existence, could not by any possibility of conception have been conjured up even to supply the unlimited necessities of the poet's strain. His lordship, however, at once terminated the probability of this mill taking the precedence, even of Sir John Spielman's, by informing me that the first nobleman succeeding to that title who had property in Oxfordshire, was the son of the first Lord Saye to whom Shakespeare makes reference.—*Richard Hering, in the Stationer, Printer and F. T. Register.*

GLOSS PRINTING.

Gloss printing is done in two ways: one by using the gloss inks especially prepared for the purpose the other by printing the gloss preparation on over the finished job or over that portion of it required to be glossed. To the inexperienced this is a difficult operation, attended by many failures. It is accomplished as follows: Prepare a tint block the exact size and shape to cover the printing to be glossed. The block should be of boxwood, or hard metal—*soft* metal will not do. Fix it on the press and make it ready as for ordinary work, with a good even impression. Wash up the ink table, the rollers, and the block itself, thoroughly removing the least trace of ink. Replace the rollers and distributors. Now with a clean palette knife put a little of the gloss preparation on the ink cylinder or table, let it distribute for about a minute, and then pull an impression; if it comes up clean the work may proceed, but if there is any signs of dirt it is best to wash up again at once. While working the gloss keep the machine in motion, and should the gloss become too sticky, which it is apt to do, sprinkle a very little turpentine on the rollers. It is best to have a separate hand to put on the gloss, so as not to delay the feeder, and the sheets should be taken away at once and laid out singly to dry. The two most important points are to have the machine clean and keep it in motion. After printing, wash up the gloss quickly with benzine.

The Fire Department is directing its efforts this week to secure effective means of escape in case of fire in manufacturing establishments, particularly in the blank-book and envelope concerns.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, August 23, 1882.

THE MONEY MARKET.—The local money market is working closer than had been expected. The recent Treasury disbursements have not had the hoped-for effect of making money plenty and cheap, but the conservative action of the banks, through fear of this very situation, has kept them from being embarrassed at the present time, notwithstanding the free shipments of currency to the West for crop movements. The rates for loans have varied from 4 to 6 per cent. on sound collateral, with occasionally higher rates paid by borrowers upon stock securities. The stock market has ruled dull and without new features. Government 4 per cents. have further advanced, while the other issues show little or no change. Railway bonds are quiet and without much variation. Foreign exchange remains firm at the late advance, but the market is quiet.

THE PAPER MARKET.—Although transactions have been few and sales limited, as usual at this season of the year, there is a decided improvement in the tone of the market. The reports of short water, and the disinclination of large mills to further reduce prices, have imparted a strong and steady tone to the market for book and news. Some of the large commission houses controlling mills have been compelled to buy from outside parties in order to keep up their deliveries, their own mills, on account of low water, being unable to supply them with enough paper to fill their contracts. It is difficult to place an order for good news at any reliable mill with a prospect of having it filled before October, and many of the mills refuse to take orders, preferring to wait until the September trade opens. Good news may be safely quoted at 6½c., and supersized and calendered book at 9c., with a firm market at these figures. Prospects for the fall trade appear brighter than for a long time. The actual stock on the market of straw wrapping is much smaller than is generally supposed. It is said that 100,000 reams are held here by an exporter, who bought some two months ago for shipment to Cuba, and this taken from the total supply will account for the small stock and scarcity of medium weight grocery grades. Straw boards are in very light movement; in fact, the season is about over, and there is considerable irregularity in prices.

THE STATIONERY MARKET.—A lower temperature and more bracing atmosphere have had a beneficial effect upon general business during the past week, and the stationery trade has come in for a fair share, for it is certain that trade has made considerable progress and is rapidly developing into a season of very great activity. Orders by mail are large and constant, and the out-of-town dealers in the city and those arriving daily are buying considerably, but cautiously, as some who bought their spring stocks late have a portion to carry over to the fall season. This caution is regarded as very favorable and shows a disposition not to overstock. The fancy-goods dealers are doing a particularly active business, some of them expressing themselves as having all of the orders that they can well attend to; in fact, nothing of a discouraging character is heard in any direction. The school-supply trade is at its height, and the orders already given are depleting stocks of certain goods. The only change to be noted in prices is a reduction in the prices of book slates, other goods remaining steady as far as we can learn.

NEW MARKING INK.

Dissolve 1 ounce of nitrate of silver and 1½ ounces of crystallized carbonate of soda in separate portions of distilled water, and mix the solutions; collect the resulting precipitate in a filter, wash it thoroughly with distilled water, and introduce it while still moist into a stone mortar; add 8 scruples of tartaric acid, and triturate the whole until effervescence has ceased; next add sufficient ammonia to dissolve the tartrate of silver, mix in 4 fluid drachms orchil, 4 drachms of white sugar and 12 drachms of finely powdered gum-arabic; then add sufficient distilled water to make 6 ounces of the mixture. This ink is said to fulfill all the conditions that a marking ink should possess. It flows freely from the pen, without running or blotting; it does not require a very strong or long-continued heat to develop it; when developed it is perfectly black, and it does not injure the texture of the finest fabric.

A MATRIMONIAL IDYL.

I.
Shady tree,
Babbling brook,
Girl in hammock
Reading book,
Golden curls,
Tiny feet,
Girl in hammock
Looks so sweet.
Man rides past,
Big mustache,
Girl in hammock
Makes a "mash."
Mash is mutual,
Day is set.
Man and maiden
Married get.

II.
Married now
One year ago,
Keeping house
On Baxter row,
Red-hot stove,
Beefsteak frying,
Girl got married,
Cooking trying,
Cheeks all burning,
Eyes looked red,
Girl got married,
Nearly dead.
Biscuit burned up,
Beefsteak charry,
Girl got married,
Awful sorry.
Man comes home,
Tears mustache,
Mad as blazes,
Got no hash.
Thinks of hammock
In the lane,
Wishes maiden
Back again.
Maiden also
Thinks of swing,
Wants to go back,
Too, poor thing!

III.
Hour of midnight,
Baby squawking,
Man in sock feet
Bravely walking;
Baby yells on,
Now the other
Twin he strikes up
Like his brother.
Paregoric
By the bottle
Emptied into
Baby's throttle.
Naughty tack
Points in air,
Waiting some one's
Foot to tear;
Man in sock feet—
See him—there!
Holy Moses!
Hear him swear!
Raving crazy,
Gets his gun,
Blows his head off,
Dead and gone.

IV.
Pretty widow
With a book
In the hammock
By the brook
* * * *
Man rides past,
Big mustache;
Keeps on riding—
Nary mash.
—*Philadelphia Times.*

IMPROVED MACHINERY AND TOOLS,

—FOR—

Bookbinders, Printers, and Paper-Box Makers.

$35.00 PERFORATOR.

ROUND HOLE, HAND OR FOOT POWER.

This Machine has been long wanted in the trade for Printers, Bookbinders, Lithographers, &c. The price will enable all concerns to do their own perforating. This Machine will allow any size of paper to be perforated without folding, and will do as perfect and as rapid work as any other machine made. It makes a round hole same as on postage-stamp sheets, will perforate 14 inches long. The needles are in sections, thereby saving a great cost in replacing the needles, and there is no taking out of needles for the stubs in check-work, &c, which saves great time. Can be run by foot-power if desired.

Something Quite New in NOTE PAPERS.

THE "Morocco Leather Note Paper." | THE "Russia Leather Note Paper."

THE STATIONERY TRADES JOURNAL says: "This is perhaps the most decided novelty in note paper and envelopes that has been offered to the trade since the advent of 'Repps.' The surface of the paper is lightly embossed to resemble the peculiar grains of morocco or russia leather, but while the imitation is perfect, the surface presented is pleasanter to write on than in the repps, and for this reason the paper will be found to suit a large circle of consumers. It has a rich and dainty appearance, qualities which are even more strikingly displayed in the envelopes. In either grain the paper is offered in four tints, with court-shaped envelopes to match. The price is moderate, ranging with the best class of medium qualities, and the paper will consequently command a very extensive trade, its pleasing novelty insuring its admission to the best, and its price not forbidding introduction in lower class businesses. The packeting deserves a word of notice for its very neat appearance. We believe the paper will take the public fancy in a way that nothing else of the kind has done for a long time."

NOTES ABOUT TOWN.

The New York Silicate Book Slate Company has issued a revised price list, making important reductions in book slates and a corresponding reduction in discount. The list price is intended to be an actual retail price and not a nominal one.

Landers, Frary & Clark, hardware manufacturers, of this city, have just issued a new illustrated catalogue. It contains over eighty pages and is 15x12 inches in size. It is printed on excellent paper and is full of engravings, each of which is accompanied by an explanation. The work is tastefully compiled. The typography and press-work are not surpassed in any work of the kind. The catalogue was produced by the Lockwood Press.

T. W. & C. B. Sheridan report business very good. They have a number of orders for their large embossing presses, having sold three to one house in this city, and they are now putting in new tools to meet the increased demand, as they have been compelled to run overtime to fill orders. This house claims to build the largest and most powerful embossing press made in the world, and its inking attachment has been a decided success, as there are over seventy now running.

Brown & Sanson have prepared a very large line of illuminated papeteries especially for the fall trade. Their steel-plate novelties are particularly unique and pretty, and deserve special mention. They consist of six series, each series or box containing four designs. Some of them are illuminated with from six to eight colors, and must be seen to be appreciated. Among them are the "Old Oaken Bucket," a beautiful peacock, several pretty landscape scenes, and one particularly good, "The Slide," taken from a steel-plate by a celebrated artist. Other pretty designs are of the æsthetic order. These number from 269 to 274. Their new line of bronzes includes ten designs, a notable feature being that the bronzes on each design are laid in a variety of shades, such as green and gold, silver, carmine, purple, &c. Besides the bronze figures, there is a series of French quotations in bronze. They have also a large line after the Kate Greenaway style, both plain and colored. Some of them are very pretty, but the designs are too numerous to make detailed mention. Their plush cabinets come in three colors, satin-trimmed, to match the plush, with extension tops and bottoms. They also have a very elegant three-quire cabinet, covered with alligator skin, round tops and covers, satin-lined, in three tints. The leatherettes are both plain and with tops of embossed flowers, very prettily hand-painted; these come in one and three quires. Imitation alligator skin card-cases are in four designs, some with silk-cord handles and others without. Some have one and others thirteen pockets. These goods are meeting with a good demand. They also show new designs in ball programmes, numbering from 1,000 to 1,008, in colors, gold bevel-edges, the figures illustrating the waltz, polka, quadrille, masquerade costumes, &c. New menus have five designs, such as the French waitress, English waiter and butler, and colored waiter and butler. New ideas are brought out in wedding goods, of which they have a very good and complete stock. The same remark also applies to Christmas and New-Year cards. They have a novelty in "duplex" paper. The paper has an antique finish, and comes in four delicate tints, and can be written upon as smoothly as on a plated paper; it has one tint on one side, and a different one on the other.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

THE GREAT ERIE RAILWAY,

LANDSCAPE ROUTE

OF AMERICA.

WRITING PLATES.

C. Thieben, of Pilsen, manufactures plates for writing upon with white cement, such as Sorel's magnesia or zinc cement, hydraulic cement or marble cement, which is pressed into thin plates. When magnesia cement is used, three volumes of very finely-powdered calcined magnesite are well mixed with one part fine powdered quartz or marble, and the mixture is wetted by means of an injector with a solution of chloride of magnesium, 20° to 30° B., or with very dilute hydrochloric acid. This mass is then passed through a disintegrator, the inner parts of which are made of caoutchouc in order to prevent the mass becoming dirty by touching a metal. It is well mixed, then passed through a sieve and placed in molds. The mold consists of a brass frame with a movable bottom of steel, on which is a polished caoutchouc plate. When the mold has been filled, it is passed through an apparatus which renders the upper side smooth, and it is then covered with a plate similar to the bottom plate. The closed mold is exposed, under an hydraulic press, to pressure up to 300 atmospheres. The pressed plate is then covered with impermeable cloth, and left to harden for some days. The plate is then soaked with a 20° B. solution of magnesite and chloride of magnesium and the surface polished with a linen rag. If lines are to be obtained on the plates the caoutchouc plates are printed with an aniline color two hours before pressing.

THE UNDERSIGNED WISHES AN ENGAGEment with a First-class Book and Stationery House, Fancy Goods or Toys, either on the road, or will take management of either branch, in which he has had fifteen years' experience. Address R. A. GRIFFITH, Stationer, Des Moines, Iowa.

SCRAP-BOOKS AND CARD ALBUMS.

Herewith are given illustrations of some of Koch, Sons & Co.'s latest designs in scrap-books and card albums. The line of card albums embraces among other styles the "Napoleon" series. This is bound in full cloth, and has round corners, and is heavily embossed in gilt, silver, flowers, birds and butterflies in natural colors. Another style is of a similar description, only it is bound in imitation leather and illuminated with groups of flowers, vases, children, &c. Another series is made in imitation of ivory, and is a very attractive style. This is heavily embossed and illuminated with peacocks, flowers, &c., in natural colors. The latter design is also bound in cloth. The "Recherché" series is plainer, but is exceedingly rich, being bound in full cloth, extra heavy boards, round corners, with cream-colored leaves, and has "Album" in rustic letters embossed on the side, and is altogether one of the finest card albums ever put on the market. The "Sèvres" series is bound in full cloth, embossed in natural representations of antique ceramics. In the line of low-priced goods is the "Arabesque" series, made up of imitation cloth, embossed and illuminated in colors. Besides the newer goods here noted, the firm keeps in stock the regular half-bound scrap-books with manilla insides, and a full line of invoice and prescription books. The latter are expressly for the use of pharmacists in filing and classifying their prescriptions. No firm in this country manufactures these goods on a larger scale than Koch, Sons & Co., and they are continually bringing out something new. Their long experience in the business should be a consideration to be borne in mind by buyers of and dealers in these goods.

SCRAP-BOOKS AND CARD ALBUMS.

JAPANESE CLOCKS.

In an article recently published in *Iron*, T. R. Green, of Yokohama, gave an interesting account of Japanese clocks, stating that their time-pieces were of two kinds, viz., the long clock, in which the hand or pointer is attached to the falling weight marking the time on a long, graduated dial plate, and the round clock, having a movable dial and fixed hand, or movable hand and fixed dial. A third system which was also in extensive use was a combination of the other two, the dial and mechanism constituting the weight, and was driven by means of a double-ratchet bar passing through the centre. In order to provide for the varying length of the day, various contrivances were adopted, and in the case of the long clock the matter was comparatively simple. Six long dials were marked with the divisions for the days of the month on one side and the nights on the other. These could be easily fitted into a case, a suitable receptacle at each side holding five. The days in winter serve for the nights in summer, and as the month ended the dial was placed in the receptacle at the right side, a fresh month's dial taken from the left, and after six months the reverse of the dial would serve, and so on. The extreme length of a day being say fifteen hours, the clock would be made to go for sixteen only, and if it were required to be kept going all night, then it would be necessary to rewind at or soon after sunset, and turn the dial plate; but generally the clock was allowed to run down at night. When the monthly alterations were abolished and the foreign system adopted, some very elaborate clocks on this system were constructed, and are now scarce and valuable. One of the best of the class is in Liverpool, England, being over four feet long, provided with crown and pendulum escapement, and having three bells on the falling weight. These are set by springs, and each requires winding separately. When the clock has run down the hammers are released by projecting palls striking against knife-edged pins, fixed inside the case at proportionate distances. The clock keeps excellent time, and is a very good piece of workmanship, apart from its being one of the most curious specimens of horology known. It is also interesting as showing the different drifts invention may run into, for the Japanese never thought of using the spring as a motor, and the invention of the fusee, but used the spring for the bell-striking apparatus only. In this they were probably influenced by the change in the length of the hour, as the spring could hardly be made to serve their purpose without great complications. Of the round clocks a very interesting specimen is now in Cheapside, London. It has one hand, or pointer, two weights, and two lever escapements, one bell of a very fine tone. The works are inclosed in a peculiar metal case, and this again in a wooden case, forming a bracket, and rather an ornamental piece of furniture. The levers are fitted with small weights, by which the length of day or night can be adjusted. The clocks are curious and interesting in every respect, forming noteworthy relics of Japanese ingenuity and skill.

WRITING ON METALS.

Take half a pound of nitric acid and one ounce muriatic acid. Mix and shake well together, and then it is ready for use. Cover the plate you wish to mark with melted beeswax; when cold write your inscription plainly in the wax clear to the metal with a sharp instrument. Then apply the mixed acids with a feather, carefully filling each letter. Let it remain from one to ten hours, according to the appearance desired; throw on water, which stops the process and remove the wax.

:o:

A CONSTANT BATTERY.

Mechanical agitation has been adopted sometimes to render the current from certain voltaic batteries constant by disengaging the gases which collect on the negative plate. Heating has been recently applied by an Italian engineer, Signor Gaudini, with a like effect in the case of a cell consisting of a cast-iron pot or vessel containing a porous clay vase, in which was placed a plate of carbon, while a zinc cylinder surrounded the vase as a positive electrode. The exciting liquid was a saturated solution of chloride of sodium, and the depolarizer a supersaturated solution of bichromate of potash and sulphuric acid. When in a cool state, this cell gives a strong, but rapidly falling, current on being worked continuously. If, however, it is placed over a small gas heater, so as to raise its temperature to about 100° Centigrade, the current keeps very constant and is very powerful. Crystals of bichromate of potash dropped into the depolarizing solution from time to time, serve to keep up the strength of current. When cool, such a cell gave an electro-motive force of 2.10 volts, and an internal resistance of 0.82 ohms. When hot, the electro-motive force rose to 2.44 volts, with a resistance of 0.71 ohms. Heating, therefore, increases the electro-motive force of the cell and the conductivity of its solutions, while, at the same time, it lessens the polarization of the electrodes.

There are four paper mills in Australia, with five machines, and two mills in New Zealand, with two machines. Only two of these, situated at or near Melbourne, are fitted with modern machinery. Both of these make print paper and packings.

Varnish for writing on glass may be made of 500 grains ether, 30 grains sandarac, and 30 grains mastic. Dissolve and add benzine until the varnish imparts to glass a roughened appearance. Use cold.

Better bend the neck promptly than to bruise the forehead.

BYRON WESTON

DALTON, MASS., U.S.A.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition*, *Massachusetts Charitable Mechanics' Association*, *Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission*, *Medal of Progress American Institute*, *1877*, *and Medal of Improvement and Progress*, *Boston*, *1878*. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. XII.---NO. 9. NEW YORK, AUGUST 31, 1882. WHOLE NO. 375.

Correspondence.

DAYTON DASHES.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, Ohio, August 28, 1882.

"Buckeyes," in debating on the advantages of their native State, have not made many claims for it as a place of summer resort, but this summer has been exceptional; cool days and nights and plenty of rain have helped to make it a most desirable place to spend the summer. As a consequence there has not been the usual Eastern rush for cooler retreats.

By this time, when all of the harvests are practically in, it does not take much foresight to predict a large fall trade. I have taken my usual plan of interviewing the trade on the present demand and the outlook for the fall season. Reynolds & Reynolds tell me that their trade was never so good as this season. Their line of composition books and other school supplies has met with a large sale. They say that a recent advertisement in THE AMERICAN STATIONER has already paid for itself in the receipt of sample orders.

G. W. Holden is pushed to his utmost capacity to get out his school-book covers and other specialties. He is working his force twenty-four hours a day. C. E. Conover, who represents him on the road, says that his trade this season is the best he has ever had; in fact, he is worked down to a mere shadow, and has come home to rest.

R. A. Rogers has just returned home from the Northwest, and had only a minute to spare me, but said that his trade was about 40 per cent. ahead of last year up to date. He showed me a letter from one of his salesmen who writes that trade is "just splendid."

Among recent representatives of Eastern houses have been Chas. Watkins, of the American Lead Pencil Company—every one likes to have a call from him; Mr. Knight, of Carter, Rice & Co.; Mr. Fleisch, of Kaufman & Strauss. They are all very much pleased with their success this season.

A visit among the paper mills does not show quite so satisfactory a state of affairs; trade is good enough as far as orders go, but prices are low. The board mills claim that it is hard to make both ends meet at present rates on paper; news is also low. I hear of sales at 5¾ cents for a fair article of paper. Manilla papers are in fair demand, but there are so many low grades in the market that it is almost impossible to get a good price for a No. 1 paper.

I have noticed your remarks about short count in pens. One of our stationers gave me his experience in that line, although the occurrence was about two years ago. He bought, as he supposed, of a New York jobber, 100 gross of pens at a very low figure; he had a complaint from a customer that they were short-count, and, on examination of several boxes in stock, 105 were the most found in any. He immediately wrote to the house complaining of the shortage, and it replied that it had not invoiced the goods as so many gross, but as so many "boxes;" on examination this proved to be the fact. The matter was settled by the return of the unsold pens. May not this account for the fact of the shortage claimed by your correspondent, and also for the fact that pens can be often bought of jobbers at less than factory rates?

Would it not be a good idea for every reader of THE STATIONER who deals in pens, to examine the different makes in stock, count carefully, and report to THE STATIONER the result? Let no guilty one escape, is, or ought to be, the motto in the

MIAMI VALLEY.

PHILADELPHIA AND THE PEN TRADE.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA OFFICE OF THE LOCKWOOD PRESS,
150 South Fourth Street,
PHILADELPHIA, August 29, 1882.

The letter signed "M.," published in THE STATIONER of August 3, and referring to short count in steel pens, has made it necessary for your correspondent to undertake a minute investigation, whereof you will herewith find the result. I visited successively the manufacturers whom I named in my letter of the 24th inst. (Turner & Harrison, Esterbrook and Warrington). After having heard each of their statements, I wanted to learn for myself in what way the pens are put up in boxes. For this purpose I asked leave to visit the factories. This request was granted with leave to conduct my inquiry after my own inclination. I satisfied myself that the process is the same with all. The manufactured pens are carried to the workwomen, whose duty it is to put them into boxes. A gross is counted—pen by pen—by one of these women, who places it in one side of a counter scale, the truth of which I verified. Each gross in turn is next weighed and put into a box immediately. It will be understood that the difference in the weights of the metal which enters into the manufacture of each pen may result in causing certain boxes to contain four pens less, although others may have an excess. To make myself sure of this variation, I counted twenty-five boxes of pens of different forms and different weights which gave me the results which I shall indicate. To count certain pens, notably those which are very bulgy, it is necessary to take great care as they stick together, and if close attention is not given the exact count cannot be made.

The boxes nearly always contain twelve dozen, but the pens are sometimes put up in boxes of one, two, or three dozen, in which case they are counted and not weighed, and the label indicates their number. Certain brands are made on special order, and are sold by the box of one hundred pens. These are generally pens of high price, and they are all counted, and the number 100 is marked upon the box.

After this investigation I sought the opinion of the wholesale trade, and for this purpose visited J. B. Lippincott & Co., Charles Cohen, McDowell, William Mann and Murphy. These firms have pens made for them, of which they are exclusive proprietors. They employ the manufacturers for this purpose, as they would employ workmen, and their boxes bear their names, to the exclusion of that of the manufacturers, and it will therefore be seen that if there was any short counting, the whole responsibility would rest upon them, without any chance of gaining by the fraud. As their opinion is of special importance, I ought to say that they are unanimous in saying that they have never had any reclamation on this score. Charles Cohen, in the conversation which I had with him, said to me: "Each of the manufacturers here is of incontestible probity, whether he makes our pens or his own; putting in the last case his name upon the boxes, he would not care to risk the practice of putting them up 'short count.' If it is true that we never count the pens, there is no doubt that certain of our customers, as well as the consumers, would count them, and reclamation would surely be made, and the immediate result would be the ruin of the reputation and business of whoever should be guilty of such a fraud. As far as I am concerned, if any manufacturer should propose to supply me with pens for a less price under such conditions, I would not give him another order."

It is my firm opinion that the short count in pens is not practised, for it is impossible that it should not be discovered. Nevertheless, it is possible that mistakes may be made by the workmen charged with the duty of weighing the pens, and that in this way some reasonable explanation may be made of the discovery by your correspondent "M." of some boxes which were short nearly a dozen. I would also add that some peddlers are in the habit of making over three gross of pens into so-called four gross, but the manufacturers would not do it.

In conclusion, let me advance a last consideration: At Esterbrook's, for instance, I counted ten young women engaged in weighing the pens;

these are encircled by twenty others, who put the pens in boxes. This firm, if it proposed to run its goods short count, would have to take all these women into its confidence. It would risk the secret to the poor protection of these female tongues, and it may well be asked if this firm is composed of men of so little judgment that they would dare to risk their reputation under such conditions? JULES VIENNOT.

CINCINNATI CLIPPINGS.

[FROM OUR OWN CORRESPONDENT.]

CINCINNATI, August 28, 1882.

One of the prettiest pieces of work ever done in the West is now issuing from the press of Robert Clarke & Co. You must not be kept waiting in the vestibule of this subject, so just step into the *sanctum sanctorum* and take a peep at the beauty. It is an art catalogue, and an artistic one it is, too. Oh, if you could only see it, how much trouble you'd save Prince William trying to describe it! It is not done yet. Three signatures are completed. The page is about the size of that of the last Salon Catalogue. A hundred and fifteen copper-colored illustrations of the contributions of American artists to the art display in the Exposition are the most striking feature. It has other hitting points, but these pictures are the hardest hitters. The printers say that the pictures are sepia, but "copper-colored" is sort of original, and it answers the purpose. The plates for these pictures were prepared by a photo-lithographic process here in Cincinnati, from sketches of pictures made for the purpose by the artists. Only about a dozen of the hundred and fifteen are of other than native artists paintings, and of these about eight are samples of the wonderful collection of C. F. Lessing's studies loaned from the art museum. Drawings of these for the photo-lithographic process were made by Cincinnati ladies who were trained in our art school. Over and above all this a preference has been been given to Cincinnati and Ohio, Kentucky and Indiana artists in this matter of illustrating the catalogue. A most vigorous effort has been made to give the display a warm tint of patriotism, and so it has large contributions from home artists taking "home" as synonymous with "America." But there are above a thousand productions in that art hall, or rather the art halls, for there are several of them. Among them are some pictures that shone in the salon, some that created a sensation in the New York Academy exhibition, some that excited admiration in the last display at Philadelphia, many that would give lustre to any display collection of modern works in either hemisphere. In many essential respects this is altogether the greatest of the art displays at the ten great Cincinnati Expositions. No preceding exhibit has been so well proportioned as this. It is a school for artists. Here let me digress to say boldly that the art displays of Cincinnati expositions have had a visible effect in educating local artists in this and neighboring cities, and one may fearlessly appeal to their products in this display in proof of this proposition. A greater variety of style and of subject never before was brought together in a Cincinnati collection. And the variety is not monotonous, for it consists of a great number of different kindred examples, which are assembled in groups on the walls and afford opportunity for comparison and contrast in the mass.

But pictures are not all of the art display. Never in America was there such an exhibit of art pottery as at this exposition. This a Cincinnatian may assert valorously, for all the world knows that in Cincinnati are most of the workers in art pottery in this country. This display will consist of exhibits by two potteries devoted exclusively to art work to an exhibit by the pottery club of the original thirteen, which is never to have an accession to its membership, and which pioneered art pottery in Cincinnati and, for that matter, in America. Chelsea, Mass., too, will be in the display with its best foot foremost. Besides this there will be the finest exhibit ever made here of the work of the Cincinnati wood-carving school. All this pottery and wood-carving business is a sort of divine passion here. It is none of your *dilettante* business. Competitors who come looking for merely amateur work have a surprise, not to say mortification in store for themselves.

By the way, one of the best things about all this picture collection is the fact that the honor of getting it together belongs to one of the craft, namely, to Harvey Anderson, of Robert Clarke & Co. By his tact, amiability and power of persuasion he brought the treasures of the East here to this exposition.

Now as to trade. Of course it is booming. Give it rein and let it boom. Summer resorters are returning, some of them pale and haggard, and others ruddy and rugged with eyes flashing eagerness for the fray. September will see them up to their eyes in work.

J. R. Mills has been absent for a few weeks. While he was gone his partner, "Billy" O'Neil, got into mischief—namely, he went and got out a lot of those reversible envelopes in several different colors, and so trouble is coming. What has been a crowd of orders will in less than a month's time be a whooping, howling jam and jostle. It never was safe to leave "Billy" without either muzzling and hobbling him or placing a stout watch over him.

W. B. Carpenter is darting around that store of his like a water-spider. He has to do it and likes the exercise. At this season of the year it's necessary in his business.

Louis Snider's Sons' operations on Walnut street, have a military look. They seem to be fortifying on the sidewalk all the time and then tearing down the forts and hauling them away. Perhaps this is all "strategy, my boy," and maybe it's only dull work, but it's noticeable when a load of bales and boxes go away the same ones never come back. The fact is they are executing an invasion of the South, if one must tell the secret.

Charles Stewart will be here monarch of all he surveys in sixty-six feet front and six stories high (including the basement). He is Charles the first of the Stewart dynasty in the paper trade here. His dominion has been extending by conquests southward until he has run against an alley. There is room north, however, for a consideration, and one with his appetite for conquest will doubtless keep an eye in that direction.

W. H. Pounsford is pounding away in his manufactory like a whole conflagration of blue blazes, and he has a shining retail department.

Wilstach, Baldwin & Co. are full of work and getting fuller every day, and, of course, are behind with their orders. What could one expect of Woodrow, but of driving trade in mercantile pamphlet and semi-book work.

It is scarcely news to say, Charley Krehbiel is doing pretty work and a great deal of it; that the Globe File Company is making things dizzy; that Bradley is driving his presses sort of Tom O'Shanter fashion; that Peter Thomson is pegging in a stragetically mysterious way; that Mallory & Webb are driving along as if a hurricane was at their heels. But some facts are scarcely news, simply because they are supposable. PRINCE WILLIAM.

CHICAGO CHIT CHAT.

[FROM OUR REGULAR CORRESPONDENT.]

WESTERN OFFICE LOCKWOOD PRESS,
8 Lakeside Building,
CHICAGO, August 26, 1882.

In view of some of the daily transactions which accidentally drift within the cognizance of the ordinary observer, one might well ask, with "Truthful James":

Is civilization a failure,
And is the Caucasian played out?

The publication in THE STATIONER of the neat manner in which Mr. Reddington was "taken in," has brought to this office information concerning a trick of the same nature which was played at about the same date, and presumably by the same facile scoundrel, upon Mr. Johnston, of Tuerk Brothers & Johnston, of water motor fame. It appears that a Mr. Shelton, president of the Omaha Water Company, virtually represents the firm in Omaha and that vicinity. Now, none of the firm have ever met Mr. Shelton, so it is not surprising that when a gentlemanly young man called upon Mr. Johnston and introduced himself as that gentleman, he should be cordially welcomed. The visitor went through the before-described routine, asking for letters, &c., and finally borrowing $2.75 to pay for a telegram which he wished to send. He knew all about Omaha, and the relations existing between Mr. Shelton and the Motor Company, and when asked regarding the water supply of Omaha, gave correctly the name of the contractor, Mr. Martin, adding that he did not expect the work to be finished much before winter. He is described as of light build, medium height, rather light complexion, wears a moustache (?) and was dressed in a black cut-away coat, vest, and light pantaloons, and carries a fine gold watch. Whoever he may be, he is certainly accomplished, and the insignificance of the sums for which he asks is surprising, seeing how easily he could, by returning the smaller sums, secure much larger ones.

While keeping an eye open for this gentleman of queer tastes, Mr. Johnston also warns printers and others to look out for a man calling himself Fred. A. Larkins, who is trying to collect money for Tuerk Brothers & Johnston, who say that there is no such man in their employ.

"Welcome the coming and speed the parting guest." It is a good motto, and doubtless all his many friends in the trade will wish all manner of success to H. A. Taylor, who has just resigned the management here of the Stylographic Pen Company and thrown in his fortune, as Western agent, with the American Screw Company of Providence. Mr. Taylor, as every one knows who knows the trade, is "business right up to the handle," and the Screw Company has certainly not lost by this acquisition; but had the Pen Company chosen any other than Mr. Atkins, of Boston, to fill Taylor's place, the change would have been more to be regretted. As it is, both being good men and thoroughly "good fellows," it is thoroughly in form to "welcome the coming and speed the parting guest."

Another change is announced in the resignation of Mr. Butt from the employ of Skeen & Stuart. Mr. Bristol, of Bristol & Smith, Utica, N. Y., is about opening a sort of independent branch house in St. Paul, and Mr. Butt, who knows the Northwestern trade thoroughly, has accepted what is said to be a fine remuneration for his services and experience from the new

house. Skeen & Stuart are not at all reticent in acknowledging their loss, while at the same time pleased at Mr. Butt's good luck.

H. E. Thayer, of Skeen & Stuart's retail department, who has been off fishing, has returned, all triumphant with his good luck. This house is now preparing for active work, and has just taken into its employ four new men.

H. McAllister & Co. are pushing very heavily in the card business. The latest announcement is a line of trade advertising designs in fourteen series, numbered from 1,026 to 1,048 inclusive. These embrace designs suitable for almost every ordinary trade, are original and copyrighted, and the first edition comprises two million cards. There are more new things from this house to be described, and they shall not be neglected; but the best plan is to send for samples and circular.

The Springfield Printing Cumpany is in the field out here with a fine line of patent calendars, for which the company's active representative, C. M. Ward, says he finds a surprisingly good demand.

H. McAllister & Co. have just put in one of the latest pattern self and hand-clamping Acme cutters—36 inch.

E. C. Dailey, La Crosse, Wis., reports a promising outlook, which Sig. Levy, representing B. Illfelder & Co., New York, and James G. Shaw, with Nagle & Co., Philadelphia, heartily confirm for the whole West, so far as they have canvassed it. G. B. H.

NEW STYLES FOR WINDOW DECORATION.

With the architectural revival of stained-glass effects for the windows, certain manufacturers find a new field opening to them for the outlet of Madras curtain goods, which are now being made in patterns copied from cathedral windows, wherein cubes, squares, and picturesque subjects are executed in bottle greens, sage greens, yellows, browns and other sombre tints, giving to the windows behind which they are hung with no folds or wrinkles, an excellent stained-glass effect.

The opportunities and possibilities of window decoration embody an endless variety of principles, all of which seem now in vogue. There is a growing demand for more color and less of the "monotonously pure and chaste" in lace curtains, and in this era of color revival we are prepared to find a big demand experienced during the next six months for the spice of color and relief from the many years prevalence of white goods. The tendency of the market has pointed this way for some years back in the constantly growing demand for écru and cream tints.

There can be no laws of interior decoration written other than the laws of good taste, which must be intuitive to be appreciated. Heavy curtains should be confined to large rooms; so should curtains of large patterns. For the reason simply that in one case the atmosphere becomes dense and impure with heavy fabrics impeding the circulation of drafts, and in the latter the recognized upholsterers' apophthegm, "The smaller the room the smaller the pattern," may be regarded as an indisputable fact, too obvious in its soundness to require solution. Lace curtains, therefore, have always been used for window decoration—and always will be—for their peculiarities of construction which allows the unobstructed admission of air.

But while recognizing the adaptability of lace goods for windows, much may be said upon the character of the fabric used, according to style or shape of the window and its location. With the opening of the fall trade an incalculable amount of Madras curtains will drift into retail stores, and unless artistically applied, great dissatisfaction will be felt with them, and the sale of them be brought summarily to a close.

It would be well for the retail dealer to emphasize in his sales the desirability of hanging the fabric at windows of sufficient altitude to give it the effect of stained glass. If draped at windows on the ground floor, the artificiality will be so apparent as to cheapen the goods in the eyes of many people. For although the desirability of the goods does not end with its appearance to stained glass, it will be, nevertheless, that one special feature which will recommend it to the consuming class, and that point must be met and protected from the prejudices which would surely beset it if it has too unnatural an aspect.

Many windows are now being treated by a strip only, or more properly speaking, a frieze of Madras goods traversing the upper part, and hanging about a foot and a half deep. Below it a brass rod extends across the casement, and the curtain itself is draped from this. The fashion at present is to have the curtain just tip the floor, but the rule is not at all arbitrary. Wherever the frieze can be of genuine stained glass, so much the better. If not, and if the frieze of Madras is not desired, an appearance of ground glass can be obtained by wrapping a piece of putty in muslin and rubbing the pad thus made over the glass. The stain which results can then be varnished, and an excellent substitute for ground glass, so far as appearance goes, is formed. To decorate this "ground glass," a form of stenciling can be resorted to, the pattern being cut of paper or bristol-board, laid upon the glass and rubbed over with any glass-cleaning preparation which readily removes the putty stains, and the pattern appears.

This fashion is the latest of those transitions which commenced when the cornice was succeeded by poles, and whether the wire beneath the frieze will long remain the novelty in this branch of decoration remains to be seen. It certainly offers an almost inexhaustible opportunity for ingenuity, which, if we mistake not, upholsterers will make the most of.—*Carpet Trade and Review.*

NEW PHOTO-CHROMIC PRINTING PROCESS.

Some time ago in an article on photography in colors we drew attention to the manifest power that could be gained in what may be called chromography, by the employment of photographically-produced gelatine printing-plates, such as used in the collographic process, variously called licht-druck, albertype, heliotype, phototype, &c. Printing by this process gives such a variety of soft gradations, that far more may be got out of one such printing-plate than out of any drawing on stone or engraving. In the film of gelatine which forms the printing surface there is, when acted upon by the joint influence of light and a proper chromic salt, a selective affinity for printing-ink which exists in no other process. A wash-like tint can thus be got which in lithography and engraving would be impossible. Supposing, then, that three suitable color-plates be prepared by this process, representing respectively blue, red, and yellow. Each of these plates will yield gradations from the lightest to the darkest, and each one will be soft and even in character, like a wash of water-color. Suppose, now, that in practice each plate is given five gradations of shade, and that we represent them by the numbers 1, 2, 3, 4 and 5, 1 representing the lightest, and 5 the darkest tint of color, and that B, R, Y stand respectively for blue, red, and yellow, the combinations of these may be practically unlimited. If we print 3 B over 4 Y, we shall have a green with a tendency to yellow, but fairly pure in character. If over this we print 1 R we warm its tone; if 2 R be printed over it, it will become less green and more autumal in character. In like manner we may compound colors possessing any desired hue. If in addition to these three colors we employ a gray and a brown to assist in giving form and light and shade to a subject, the power of imitating a copy is so increased that, so far as this means of printing is concerned, little more is required to give a fair fac-simile of any water-color painting.

A practical way of carrying out this system of printing, which may conveniently be called photo-chromography, has been invented by Herr F. G. Hoesch, a photo-lithographer, of Nuremberg. A photographic negative of the picture to be reproduced is made, and from it are printed five proofs in gray color. An artist who has been used to chromo-lithography is then employed to work up these photo-prints, but instead of working by stippling, hatching, &c., he employs definite tints, composed of white and black, mixed to form five different gradations from white to black. On the one that is to represent the yellow, he first paints out in white wherever yellow is not to occur; he paints in black what is to be a full yellow, and the intermediate gradations are laid in with the varying shades of gray. In like manner are painted up the impressions representing the blue, red, gray and brown printings. From these prints photographic negatives are taken of the size the work is to be. Thick glass plates are then covered with a film of gelatine made sensitive to light by means of a bichromate salt. The negatives having been placed upon these plates, they are exposed to light for a few minutes, and are then washed to remove the yellow bichromate salt. They can now be printed from after the manner of lithography (the surface being kept damp during the printing), the plate receiving ink just in proportion as the light has acted upon it. By printing in appropriate colors from each plate so as to fall in proper register upon one piece of paper, a highly-finished picture is produced. All the color in the lights is secured by the three primary color printings, red, blue and yellow, while the toning into half-tints and shades is effected by the gray and brown printings.

Such is the general principle of this remarkable process; but for facilitating the matching of the colors of the original painting, the inventor has contrived a color scale, printed in a similar manner, which gives over 1,000 different gradations of hues, tints, and shades with five printing-plates. By cutting a square out of a piece of paper and laying the hole so made over any portion of the painting, and then comparing in a similiar manner the color-scale with it, a reference to the margin will give the combination of the tints of color necessary to form a similar match in printing. The requisite number of photographs are then to be painted with the proper tints in the right places. Every part of the picture is to be thus treated. By adopting this system a person inexperienced in the production of chromo pictures may make a very fair copy, but it follows that an expert chromo-lithographer will possess experience that will much facilitate the expedition of such work. It is of very great importance that no mistake

should occur, as it is not easy to improve the plates after they are once made. If an omission or a mistake occur, it may be corrected on the painting from which the negative is taken, and a fresh printing-plate may then be easily produced.

It is claimed that these plates may be printed by steam machinery, similarly to lithographic impressions, but not quite so quickly. One source of weakness in the process is that no color pigment at present in use is pure in tone. Thus in selecting a blue it cannot do equally well for producing green and purples; no red will answer equally for both crimsons and scarlets. As chromo-lithography, or any analogous process, demands more printing to get an approach to the softness of effect of the new method, a greater variety of color may be introduced and superior brilliancy attained, because of two blues, one may tend to purple, while another favors green. In the full tints of the color, therefore, the chromo-lithograph will have the advantage. Of course, the same principle may be adopted in the new process, but if the colors are to be much increased in number, one great advantage will be lost.

It remains to be seen whether the printing can be carried on by steam machinery at a speed high enough for it to successfully compete with other known processes. It is already acknowledged that the plates will not yield anything like the same number of impressions as a stone or block, and though it is very easy to prepare other plates when the negative is once taken, it will, of course, delay the machine somewhat to replace a worn plate. Another point is that a worn plate does not fail at once, and some of the impressions might appear to be unequal to others, and should it so happen that impressions in one color from a worn plate fall upon impressions in another color from a plate yielding full effects, the result would undoubtedly be unsatisfactory. It is true that lithography and other processes are liable to the same failing, but as the stone or block prints longer numbers, it is not like having to renew a plate several times.

We have little fear that the process is going to replace older methods. The collographic mode of printing as applied to one color has long been in use in this country and on the Continent without injuring the prospects of lithography. It has made a branch of business for itself, and doubtless the new development will do the same, and we think there may be a great future awaiting it.

A limited liability company is now in course of formation for working the English patent, and in due time we shall see what progress it is likely to make. It is proposed to execute all classes of work, but we do not think one company will be very successful in producing both high and low-class business, and we would therefore recommend them to rely upon the former, as really successful imitations of paintings should be produced by such a process at a cost much below that of lithography. They would probably possess that "painty" character in an eminent degree which a lithographer finds so difficult to imitate with success.

Our correspondent at Nuremberg sends us word that the samples of this process exhibited at the Art and Industrial Exhibition there are wonderful in drawing and detail. Our own opinion of the examples shown to us by the English patentee, Mr. Meihé, is also very favorable indeed, and we feel convinced that the process is destined to take a very high rank if applied to work worthy of its capabilities.—*Printing Times and Lithographer.*

POSTAL BUSINESS OF THE WORLD.

The following statement, showing the development of the postal arrangements of the various civilized nations, has been obtained at the Post Office Department from statistics of 1880 of the postal service in countries belonging to the Universal Postal Union. The number of letters and postal cards dispatched and received in the domestic and international services per capita of population in the various countries is stated as follows: Great Britain, 37; United States, 22; Switzerland, 22; Netherlands, 17; Belgium, 16; Germany, 15; France, 14. Estimating the population of the whole globe at 1,400,000,000, the number of letters and postal cards per individual averages about three and a half. The larger countries, according to the number of newspapers dispatched by them, are ranged as follows: United States, 18,378,837; Great Britain, 16,697,753; France, 15,894,252; Germany, 8,760,000; Italy, 5,030,860; Belgium, 4,001,000; Spain, 3,117,521, and the Netherlands, 1,251,605. In a comparison between the length of railway lines, high-roads and water routes used in 1880 for the conveyance of mails in the various countries, it is shown that this country occupies the first place, the length of such routes being 550,221 kilometres; France follows, with 227,591 kilometres; Russia, with 171,268 kilometres, and Germany, with 161,609 kilometres. No information relative to Great Britain and British India is furnished on this point. Another item given is the number of kilometres traversed by the traveling post-offices or railway mails in 1880. In this respect the United States ranks first, with 150,399,941 kilometres of railway mail transportation; then follows Germany, with 102,799,339; France, with 66,150,755; Austria, with 29,167,664; Russia, with 23,203,638; Hungary, with 12,504,957; Spain, with 5,942,754; Sweden, with 5,656,897, and Switzerland, with 4,772,740 kilometres. With regard to Great Britain and British India there are no statements under this head. In mail transportation effected by means of post routes the United States again ranks first, with 121,713,592 kilometres; next comes Germany, with 62,745,103; then France, with 48,869,120; Russia, with 33,415,955; Austria, with 31,743,825, &c. No particulars are given on this point with reference to Great Britain and British India. Under the heading of annual mail transportation by ships in 1880, 9,069,941 kilometres are given as having been traversed by the ship mails of the United States. Then follow France, with 5,240,214; Sweden, with 3,512,726; Argentine Republic, with 3,452,901; Russia, with 2,856,000; Hong-Kong, with 2,600,000; Austria, with 1,834,640; Italy, with 1,711,304; Belgium, with 1,671,540; Norway, with 1,665,552; Japan, with 1,249,675; Hungary, with 1,066,998, and Germany, with 1,009,930 kilometres. Great Britain and British India are not given. According to the statistics for 1880, Germany, of all other countries, obtained the largest gross revenue, namely, 190,229,319 fr.; next came the United States, with 176,453,627 fr.; Great Britain, 168,335,675 fr.; France, 112,687,572 fr.; Russia, 56,694,540 fr.; Austria, 41,519,703 fr.; Italy, 28,189,618 fr.; British India, 22,324,407 fr.; Spain, 18,723,485 fr.; Switzerland, 17,589,901 fr.; Hungary, 15,890,022 fr.; Belgium, 11,599,607 fr.; the Netherlands, 8,828,838 fr.; Sweden, 7,133,273 fr.; Japan, 6,439,847 fr., and Denmark, 5,550,803 fr. In conclusion, it is shown that the largest net revenue in 1880 was obtained by Great Britain, namely, 64,944,200 fr. Subsidies out of state funds were required by sixteen postal administrations. This subsidy amounted in the United States to 16,536,575 fr.; in Russia to 4,520,176 fr.; in Dutch East India to 2,589,990 fr.; in Japan to 1,344,974 fr.; in Roumania to 694,280 fr.; in Ceylon to 263,184 fr.—*Bradstreet's.*

LAYING VENEERS.

This method of laying walnut veneers is given in a technical journal: First have the veneer and the surface to be veneered very smooth by going over with a fine toothing plane to take out all saw marks. The veneer must be left a little larger than the surface to be covered. The wood—not veneer—must be well sized with thin glue; you can do this by dipping the brush in the glue and then in the boiling water, and then allow it to dry. Have very good glue boiling hot laid on the wood and veneer, lay the one on the other and then press well together, having first moistened that side of the veneer not to be glued with boiling water by a sponge. If a large piece, it will require a hot iron run over the surface to keep it down. It will all spoil if the iron is too hot. It must be clamped or weighted by laying boards on all night.

A new machine for stitching copy-books has been invented by M. Auvinet, of Paris. The obstacle to the employment of book-stitching machines has hitherto been the expense of the wire, which has therefore been replaced by cotton, two pennyworth of which is sufficient to sew a thousand copy-books. M. Auvinet's system is automatic. A work-girl counts the sheets, places them on the machine against a guide, where a system of rollers, furnished with twine, conducts the copy-book beneath the needle. While one book is being sewn, the girl has enough time to count a fresh number of sheets, forming a second copy-book, which she adds to the first, the latter being carried to the end of the machine, where an automatic folder, working by means of a lever, falls on the middle of the copy-book and folds it in two. Meantime, the covers are prepared, in order that they may be pasted on as soon as the sewing is finished. In this manner the sewing is quite hidden. Pasting down the covers separately is a drawback, but, making allowance for this, a saving is effected by the use of the machine.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., *79 Beekman Street.*

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

THE previous success of our Cards, it is confidently expected, will be fully sustained, if not increased this season, an expectation which is already verified by the large advance orders received, justifying our increased efforts to bring out a line superior to all our previous productions. Our line will again comprise Double and Fringed Cards as well as Heavy Mounts. All the Fringed Cards will be provided with protectors, and envelopes will be furnished for all cards costing $1.80 and upward. The names of the artists who have contributed designs are a guarantee of the excellence of our Cards. We will name only the following :

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,

SPECIAL NOTICE.—Importers and Jobbers would do well to inspect my Holiday Novelties, introducing Cards mounted in Plush, Marvelieux and Brocaded Satin.

THE BEST DIARY.

ECONOMICAL DAILY MEMORANDUM

·1883·

ANNOUNCEMENT.

WE present for approval the "Economical Daily Memorandum" in various sizes and styles, printed on good paper, strongly sewed and neatly bound, with leather backs and printed sides, also in full leather.

Besides a space for each day of the year it contains tables of the rates for foreign and domestic postage and money orders, valuable postal information, calendar and cash account for each month.

In addition to days of the week and month, the diary is numbered for the days of the year, a valuable improvement, useful for time calculations.

Dealers, whose trade does not warrant an investment of the considerable sum required to purchase an assortment of Diaries in the usual extended variety, will find a few dollars profitably spent in buying these goods, which come within the reach of all.

Dealers, already carrying a line of other Diaries, will find the "Economical" a valuable addition. Being made without flap or tuck they can be retailed at the price commonly charged for similar plain memorandum books, and therefore extend the sale to a different class of buyers.

We will be glad to furnish the trade samples at a reduced price. We solicit early correspondence in order that books may be received in time to make a selection and place an order for early fall trade.

Owing to the limited season during which Diaries are retailed, the demand must be anticipated by both jobbers and manufacturers.

MACKINNON PEN COMPANY,

MANUFACTURERS OF

The Mackinnon Iridium Pointed Fountain Pens.

Patented July 21, 1876; reissued July 15, 1879; Patented January 21, 1879, July 29, 1879.

AND THE AMERICAN STYLOGRAPHIC PENS,

Patented July 21, 1876; reissued July 15, 1879, July 29, 1879, March 23, 1880, August 31, 1880.

OFFICE, No. 192 BROADWAY (corner John Street), NEW YORK, U. S. A.

PRICE LIST:

Short, plain,	$4.00	Long, plain,	$4.50	Plain Pocket,	$4.50
" mounted,	4.50	" mounted,	5.00	Mounted Pocket,	5.00

THE MACKINNON PEN is a practical Fountain Pen, and is made of the best and most durable materials, a conical tube of gold, tipped with a circle or bored grain of IRIDIUM, makes the writing point. (The valve needle which rests more lightly on the paper when writing, is also tipped with Iridium.)

AMERICAN STYLOGRAPHIC PENS.

Short, plain,	$2.00	Long, plain,	$2.50
" mounted,	2.50	" mounted,	3.00

These Pens are in every respect, except the Iridium Points, as well made as the Mackinnon Pens.

PATENT IMPROVED NEEDLE-ADJUSTING AND CLEARING DEVICE.

The Needle can be adjusted to suit any hand.

A. POINT COVER.
B. VALVE NEEDLE.
C. IRIDIUM WRITING POINT.
D. VALVE CHAMBER.
E. AIR OUTLET.

F. AIR TUBE. Which supplies air to take place of Ink used. This must be kept free from Ink. Blowing through from top will sometimes start Pen if it stops.

G. HOLDER. Containing Ink, which is filled at joint, with Valve Chamber D, shown partly open. Any good Ink may be used. Wash out if it clogs.

H. AIR CAP, with Air Inlet I. This must be opened before taking off Point Cover, or unscrewing Ink Joint. Kept open when in use, except only when washing or shaking.

The Needle can be made to clear itself of dirt, &c.

The MACKINNON PEN COMPANY claim that all other Stylographic Pens are infringements of their Patents. No claim is made that the Company infringes the rights of others.

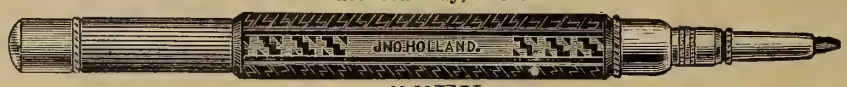
Something Quite New in NOTE PAPERS.

THE "Morocco Leather Note Paper." | THE "Russia Leather Note Paper."



THE STATIONERY TRADES JOURNAL says: "This is perhaps the most decided novelty in note paper and envelopes that has been offered to the trade since the advent of 'Repps.' The surface of the paper is lightly embossed to resemble the peculiar grains of morocco or russia leather, but while the imitation is perfect, the surface presented is pleasanter to write on than in the repps, and for this reason the paper will be found to suit a large circle of consumers. It has a rich and dainty appearance, qualities which are even more strikingly displayed in the envelopes. In either grain the paper is offered in four tints, with court-shaped envelopes to match. The price is moderate, ranging with the best class of medium qualities, and the paper will consequently command a very extensive trade, its pleasing novelty insuring its admission to the best, and its price not forbidding introduction in lower class businesses. The packeting deserves a word of notice for its very neat appearance. We believe the paper will take the public fancy in a way that nothing else of the kind has done for a long time."

IMPROVED MACHINERY AND TOOLS,

—FOR—

Bookbinders, Printers, and Paper-Box Makers.

$35.00 PERFORATOR.

ROUND HOLE, HAND OR FOOT POWER.

This Machine has been long wanted in the trade for Printers, Bookbinders, Lithographers, &c. The price will enable all concerns to do their own perforating. This Machine will allow any size of paper to be perforated without folding, and will do as perfect and as rapid work as any other machine made. It makes a round hole same as on postage-stamp sheets, will perforate 14 inches long. The needles are in sections, thereby saving a great cost in replacing the needles, and there is no taking out of needles for the stubs in check-work, &c , which saves great time. Can be run by foot-power if desired.

Price, 14 inch Hand, Wooden Table, $35.00 | Price, 14 inch Foot, Wooden Table, $45.00

Iron Table Extra, ... $10.00

E. P. DONNELL & CO., 196 Clark Street, CHICAGO.

Factory, Rear 196 to 206 Clark Street.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Wm. Nesbitt, fancy goods dealer, Utica, N. Y., is closing up.

An account of Hard & Parsons' picnic is given in another place.

C. Chenoweth, newsdealer, &c., Winnemucca, Nev., is advertising to sell out.

F. H. Clewell has bought out John F. Ward, stationer, &c., Helena, Montana.

Ansell & Bates, printers, Glencoe, Minn., have dissolved partnership; M. Ansell succeeds.

The Owatonna Book and Stationery Company, Owatonna, Minn., is advertising to close out.

H. A. Bolles has succeeded Bolles & Shamp, booksellers and stationers, Council Bluffs, Iowa.

P. J. Bennett, publisher of the *Norway Iron Mine*, Norway, Mich., has sold out to McCarthy & Cooney.

Edward H. Johnson, of the New York Blank Book Company, is a passenger on the City of Rome, which is expected to arrive here in a few days from Europe.

The firm of Almy, Milne & Co., publishers of the *Evening News*, Fall River, Mass., has been dissolved by the death of Thomas Almy. The remaining partners continue as Almy & Milne.

Max Griebel, of L. Prang & Co., has been moving during the past week and was unable to see many of his friends who called for that purpose, but he is now ready to meet all who may want to do business with him.

G. W. Carleton & Co., publishers, New York, state a Canadian firm is infringing their copyrights by offering reprints of several of their publications, and they warn the trade against buying, importing, or exposing for sale any of these reprints.

Jacob Lang, Jr., Louisville, Ky., formerly connected with Dreier & Lang, has sent on this opening announcement, He is located at 229 Jefferson street. His card is a folder, the exterior in colors, &c., and a very pertinent suggestion, "Forget me not," is on the back. His list is full and varied.

Joseph A. Hoffman, 208 Montgomery street, San Francisco, is making a line of pen-wipers in new designs. They are very taking, and are suitable for school children or for office use. There are twelve numbers. These are cheap, and come half a dozen on a card, or in assorted cards. The demand is said to be great. J. B. Lippincott & Co., Philadelphia, will handle them.

The business of the firm of John B. Davids & Co., 184 William street, this city, composed of John B. Davids and Matthew J. Brennan, manufacturers of writing inks, mucilage, &c., has been placed in the hands of a receiver. A suit was instituted by Mr. Davids to dissolve the copartnership and a few days ago Judge Donohue, of the Supreme Court, appointed Henry A. Brann, an attorney-at-law, 132 Nassau street, receiver of the property and assets of the firm. Mr. Brann has qualified and entered upon the discharge of his duties as receiver and will settle the affairs of the firm as speedily as possible. The business has been established a little more than a year. Mr. Davids is a son of Thaddeus Davids and was connected with his father's firm for a number of years. Mr. Brennan is a son of ex-Sheriff Brennan.

In January last the Dixon Crucible Company, Jersey City, N. J., manufacturers of the celebrated Dixon's American graphite pencils, offered twelve cash prizes amounting to $275, for drawings made with their pencils by pupils of any American public or private school, or by any art student. The class of work was to be from the flat, from a cast or object, and from life. Competition was governed by the age of the pupil for all the prizes with the single exception of the $50 prize offered to art students, thus making an equable provision for pupils of all ages and degrees of attainment in the art of drawing. The prizes ran from from $5 to $50 each. There were no second prizes. The decisions were announced on July 13. The judges who decided upon the merits of the drawings submitted were: Virginia Granberry, teacher of drawing in Packer Institute, Brooklyn, N. Y.; Prof. Louis Bail, teacher of dgawing in the public schools of New Haven, Conn.; and Prof. George E. Gladwin, teacher of drawing, School of Technology, Worcester, Mass. These judges gave long and careful consideration on the merits of each picture before making their decisions. Two hundred and sixty-four drawings were sent in, representing twenty-two States. The $50 prize offered to art students for a drawing from life, was awarded Mary Fairchild, St. Louis, Mo. Subject, human head. The $50 prize offered any school pupil, over twenty years of age, for drawing from life, was awarded M. L. D. Watson, Morristown, N. J. Subject, female figure in costume. The other subjects awarded prizes were drawings from nature and life. The Dixon Pencil Company, proposes to repeat this prize-drawing award next season. Announcements of the terms of competition will be made early in October.

The Artistic Stationery Company, London, of which John J. Horrocks is managing director, has forwarded some early proofs of calendars, menu cards and etchings. Unfortunately, in transmission through the mails much injury was done to the samples, and some were probably lost. Such as remain include neat designs in menus, some of which are quite taking. The engraved calendars are in good taste, the Dickens calendar showing scenes from the works of the great novelist. The etchings are well executed, particularly those printed on satin, although the mounts are not what they should be. The full line will doubtless afford a very nice selection. Willy Wallach has the agency.

J. C. Koch, the founder of the firm of Koch, Sons & Co., is a passenger on the steamer Suevia of the Hamburg line, and is expected to arrive here this week. This is Mr. Koch's first visit to this country for five years. His firm is making preparations to give him a very cordial reception.

J. F. Hitchcock has been in town this week closing up his business at 72 Duane street. He now has the management of J. D. Whitmore & Co.'s factory, at Holyoke, where he would be glad to hear from any of his old friends in the trade.

Henry Levy & Son, 477 Broadway, advise the trade to place their orders for the Parke Dundee school-bags early, as the supply will not probably equal the demand. Orders first placed are first filled.

E. B. Curtiss, of Cunningham, Curtiss & Welch, San Francisco, Cal., has recently come to this city to represent the firm here, Mr. Cunningham having returned to California.

The *Herald* Publishing Company, Columbus, Ind., has filed articles of incorporation. Capital stock, $4,500.

Fisher & Vivian, succeed Hayer & Vivian, printers, St. Louis, Mo.

Adair & Brown, booksellers and stationers, Peoria, have dissolved partnership.

Charles L. Sherman, dealer in notions, Anderson, Ind., has sold out to E. Sherman.

Mrs. J. W. Jones, dealer in notions, Dayton, Ohio, has fold out to Peter C. Hawkes.

Noble & Kelly, bookbinders, Utica, N. Y., have been succeeded by Noble, Kelly & Co.

S. D. Cook, publisher of the *Dakota Register*, Chamberlain, Dak., has sold out to J. S. King.

Thomas Lynsky, dealer in woolen rags, Philadelphia, Pa., has been burned out; loss slight.

Kaber & Schmidt, printers, Cleveland, Ohio, have dissolved partnership. M. Kaber succeeds.

Hausman & Burow, printers, Buffalo, N. Y., have dissolved partnership. Hausman & Schweigert continue.

L. D. Anthony & Co., wholesale dealers in fancy goods, Providence, R. I., are selling out by mortgagee.

Dennis Dunne, paper-stock dealer, Groton (Mystic River), Conn., has been burned out. Insured for $1,500.

Tibbitts & Shaw, booksellers and stationers, Providence, R. I., have admitted Walter B. Swartz, and changed style to Tibbitts, Shaw & Co.

C. F. Griffin, of H. Griffin & Sons, dealers in bookbinders' materials, 54 and 56 Duane street, this city, is still in Europe, and while in pursuit of pleasure, is looking after the interests of the trade.

Among the members of the trade, who visited this city during the week, were T. T. Wright, Pensacola, Fla.; Mr. Catlin, of Catlin & Co., Jacksonville, Ill.; and H. L. Schreiner, Savannah, Ga.

W. O. Wyckoff, C. W. Seamans and H. H. Benedict, of this city, have associated themselves in copartnership, under the style of Wyckoff, Seamans & Benedict, for the sale of the Remington type writer, of which they have contracted for the entire production with the makers, E. Remington & Sons.

"The Yankee Middy," published by Lee & Shepard, Boston, is one of the Oliver Optic series of juveniles, and is one of the best works to be placed in the hands of youths who delight in tales of adventure. It is not of the "dime novel" order, but while treating of adventure inculcates truth and honorable traits of character. Its naval portraitures are said to be correctly drawn. It is the fourth volume of the "Army and Navy Series."

A. Hahn, 296 Broadway, New York, makes a specialty of manufacturing book and shawl straps, of which he has always a large stock on hand. He also manufactures a full line of satchels, belts and leather novelties. Mr. Hahn has been making these goods for nine years past, and has from twenty-five to thirty hands constantly employed. Of shawl straps he makes some sixty varieties, costing from $1.50 to $18 per dozen.

The last week's arrivals, via Inman and White Star steamers, have included some rare designs in combination letter-rack and inkholders, with and without bronze ornaments, and also more elaborate patterns in Hungarian ware. Jno. Wilson's Sons' show-rooms are well worth a visit, and no dealer who anticipates any fall or holiday trade in articles which are attractive to purchasers of taste and culture, can reasonably afford to miss the present opportunity for in-

specting their varied lines of exquisite and attractive novelties.

W. L. Price, dealer in notions, Knoxville, Tenn., is closing out.

The Victoria Paper Mill, Fulton, N. Y., has been burned out; insured.

J. Clements, stationer, &c., Red Bluff, Cal., has had his stock attached.

F. L. Durand, stationer, &c., Osage, Iowa, has sold out to Ross & Rands.

The *Lovel and Reporter*, Loveland, Col., has been sold to Bruner & Coleman.

J. Clements, stationer, &c., Red Bluff, Cal., has been burned out; partly insured.

Ladd & McConnell, dealers in notions, Sheldon, Iowa, are advertising to sell out.

The *Solid Muldoon* newspaper, published at Ouray, Col., has been sold to Dave Day.

C. A. Foster, stationer, &c., Chicago, Ill., has been partly burned out; insured for $3,500.

A. Townsend, publisher of the *Sentinel*, Red Bluff, Cal., has been burned out; partly insured.

Hervey & Fitzgerald, dealers in paper stock, Athol, Mass., have been burned out; partly insured.

J. F. Hetherington & Co., publishers of the *Sentinel*, Emporia, Kan., have sold out to J. M. McGowan.

Baillie & Anderson, printers, Halifax, Nova Scotia, have dissolved partnership. George W. Baillie continues.

Hopp, Shannon & Davis, printers, Brookings, Dakota, have dissolved partnership. George W. Hopp succeeds.

Hand & Kenyon, publishers, Iowa Falls, Iowa, have dissolved partnership. Countryman & Kenyon succeed.

Gregory & Brown, paper-box makers, Columbus, Ga., have dissolved partnership. J. R. Gregory continues.

Wm. B. Stevens & Co., succeed Stevens & Hall, publishers of law and subscription books, Philadelphia, Pa.

Williams & Roger, booksellers and stationers, Mount Ayr, Iowa, have dissolved partnership. W. A. Roger succeeds.

The semi-annual book trade sale will begin on Tuesday morning, September 26. It will be held at the usual place, Clinton Hall, Astor place, under the auspices of Geo. A. Leavitt & Co.

The Dixon American graphite artists' pencils are well adapted to clear, sharp and delicate work, and are smooth, free from grit and easy to use. Testimonials from connoisseurs recommend them highly for drawing classes.

The L. B. Pamflet Case (the makers spell it so, and ought to know) is offered, subject to return at manufacturers' expense, if not found the best on trial. Catalogue of ten sizes, &c., free of the Library Bureau, 32 Hawley street, Boston.

Charles J. Cohen, Philadelphia, has just received an invoice of whist and bezique markers similar in style to those sold by Goodall & Son, of London, but at less than one-half the price. Each set is neatly put up in a box, and dealers in that line of goods should write to the house for samples and prices.

E. P. Donnell & Co. were tendered the order for machinery to be put in W. B. Conky & Co.'s new addition bindery in perference to other competitors, but they could not accept the order, as it was to be made in too short a space of time. E. P. Donnell & Co. are full of orders in their shop, and they regretted exceedingly that they were not able to take the order mentioned.

Among the recent arrivals in the trade are Mr. Howard, of Wernot, Howard & Co., Dubuque, Iowa; E. D. Bartholemew, of E. D. Bartholemew & Co., Decatur, Ill.; J. K. Gill, of J. K. Gill & Co., Portland, Ore.; Mr. Smith, of Smith & Mullen, Iowa City, Iowa; Mr. Cole, of Pelot & Cole, Augusta, Ga.; Jared S. Dodge, of Dodge Brothers, San Francisco, Cal.; Mrs. J. C. White, Boston; Mrs. R. R. Bowling, Louisville, Ky.; C. J. Daniel, Albany, Ga.; H. T. Smith, of H. B. Nims & Co., Troy, N. Y.; George Weingart, New Orleans, La.; Sherman Stevens, Norwalk, Conn.; Mr. Harrison, of Harrison & Allen, Brick Church, N. J., and A. W. Trimmer, Hackettstown, N. J.

M. A. Reay has built an extension to her factory at 77 John street, this city, for the purpose of manufacturing illuminated stationery on an extensive scale. Presses and machinery are now being put in place, and specimens of the productions will be offered in about ten days. Some of the specimens now ready are exquisite. All of the designs are original. This is the firm's first effort in this line, and it intends to leave nothing undone to bring out the most *recherché* goods ever produced in this line. Judging from the enterprise previously manifested by the house, there is every probability that it will be able to fulfill its promises. The new department is superintended by D. L. Davis, recently with Bailey, Banks & Biddle, Philadelphia.

The Nippon Mercantile Company has just opened up a new line of goods suitable for the fall trade. It includes porcelains, lacquers, novelties in screens, silk decorative goods and ornamental house furnishing goods.

FOLEY'S PAT. IMPROVED STYLOGRAPHIC PEN.

Great reduction in price: No. 1, $1.75; No. 2, $2.50; No. 3, $2.50; No. 4, $3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, AUGUST 31, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

ONE of our correspondents lately offered an apology for troubling us to answer an inquiry as to where certain goods could be had. We want to say to him and to all of our friends that no apology of the kind is needed. THE STATIONER is for the trade and of the trade, if not in it, and it is our pleasure and duty to give such information. To be sure, at times it is considerable trouble to hunt up some individual or line of goods hiding within the almost impenetrable darkness of a commercial cavern and not advertised, and we are sometimes called upon to give gratuitous publicity to persons who seem to abhor a newspaper; but for all this, we are not the less willing to help the readers of THE STATIONER to any reasonable extent, and to tell them where and how things that they want are to be got. One effect of an inquiry in last week's issue has been to draw out an advertisement from a manufacturer, who ought always to have his card in the trade paper. We hope that other people will profit by this fact and example, and let the trade know that they are alive and do business.

THERE is wonderfully little that is exciting in the trade. Everything seems to work smoothly and business is progressing on all sides with seeming satisfaction. This absence of excitement is doubtless a good indication. It shows that men are not driven by speculation, and that disturbing influences are not at work to cause trouble and annoyance. The volume of trade is ample, and from all that we can gather there has never been a better, or promise of a better, season. The quiet trade movement, swelling day by day, is therefore indicative of confidence and prosperity, and is thereby assuring. If stationers will only hold to the safe rule of doing business, without excitement and with prudent regard for the probabilities of the future, they will be least affected when the turn comes, and will not have the occasion to regret haste and waste that others will have when the changes which occur periodically in commerce shall begin to make themselves felt.

THE short count in pens is again taken up by two different correspondents, and we have been given the results of a count of several boxes of pens, which indicates that full tale has been given. Perhaps the suggestion, that our correspondent "M." has had his pens invoiced to him by the box or that they have been tampered with by some one intermediate between him and the manufacturer, is the true solution of the "short count." As yet we have not found testimony to connect any of the manufacturers with the fraud, although, as we have said, in the instances of three of them, several boxes were reported to be short of a gross. But this appears to be exceptional, and, consequently, until it is shown to be a usual thing, "short count" cannot be charged upon either of them. Our correspondent "M." has done well to call attention to the fact that he has bought pens which did not fill the count, but he should look at his invoices, take note of how and through whom he bought his pens, examine the boxes carefully, and follow up the trail. So far, at least, his complaint is isolated.

THE progress of the age is remarkable. We have all heard of "King Cotton," and there have been people who disputed this sovereignty, but, if all that is said about the cotton plant is true, it would be treasonable to question its right of dominion. The cotton plant to-day supplies us with clothing and with material for many of the wants of life; it gives us oil, wherewith we may lubricate our viands; meal, to feed our cattle; refuse, to enrich the soil; but its latest gift is its adaptation to soup. A hybrid of the cotton plant and okra is said to have been grown with wonderful results. Yet, when we come to consider the manifold applications of the plant, we cannot but realize its extraordinary value. Great are the uses of cotton!

ANSWERS TO CORRESPONDENTS.

F. H. D., who asked last week for an indelible ink to be used with stylographic pens, is informed Edward N. Kent, 116 John street, New York, has forwarded to this office an indelible ink which does not require sun or heat, and which, it is said, can be used with any stylographic pen.

J. W. R. & E.—As promised, we give you the names of some other manufacturers of school straps. They are A. Hahn, 296 Broadway, New York, and Cathrein Joseph, 191 Ellery street, Brooklyn, E. D., Kings County, N. Y.

S. & S. want to know who publishes "Woolsey's Decimal Grain Tables," or of whom they can obtain the work.

Ans.—We have not been able to find the publisher, but will push the inquiry and let you know the results.

A Point on Discounts.

To the Editor of The Stationer:

There has been of late quite a little said in your valuable paper about "short count" in pens. I do not know who "M." is, nor to whom he refers in his letter of the 5d; but I am inclined to think that we have no pen manufacturers who would stoop to so small a trick as that.

The "short-count" pens may be put up by the firm which offers to sell Prang's Christmas cards for 10 per cent. better discount than any one else I have heard of. It offers (confidentially, of course) to sell the above-named cards for — per cent. and 10 per cent. discount; but when it bills them only bills — per cent. off, and has an understanding with the customer that when they are paid for he is to deduct 10 per cent. from the amount. Now, this may be all right, but it does not look so to me. I like to buy my goods as low as any one, but at the same time I do not want to buy of a firm which is willing to put one part of the contract in black and white and is afraid to do the same with the other part, for fear that the manufacturer will find him out. I feel that if he will deceive the manufacturer he will the retailer. I believe that L. Prang & Co. will not furnish their cards to any person who will not agree to sell at the stated discount, or in other words, who will not agree not to give a better discount than their (Prang & Co.'s) regular discount. X.

NOTES ABOUT TOWN.

Hard & Parsons are so pressed with orders that they have to work nights.

H. K. Dyer, the manager in this city for the Dennison Manufacturing Company, and Alexander Agar, left here yesterday for a trip to Maine, to be gone for about a week. They expect to take in Shelter Island on their return.

Myers Brothers are bringing out every week something new in the fancy card line. The firm's stock is very full, and there is every probability that it will not last long when the trade begins to buy in earnest. A new mounted and perfumed sachet, which the firm shows this week, is remarkably neat and pretty, and will be appreciated when seen.

Henry Levy & Son have just received their line of photograph albums for the fall trade. These goods have all of the latest improvements in binding and clasps, and the exterior designs show new and elegant covers of plush, russia, morroco and satin. The firm's facilities enables it to place these albums at prices much below any previous rates. The firm also shows in large variety, at low prices, scrap books neatly gotten up and of good stock.

Hard & Parsons have in course of preparation a series of "Owl" programmes. They are in four designs, each of which is illuminated with the pictures of the bird from which they derive their name. The mottoes on each side are pertinent to the designs. They have also got out two new styles of note paper, the "hammered silver," and "polka dot." These are entirely new and are thought to be very taking. They come in cream and white.

William Bruns has just introduced two series of comic oleographs. They are 10 by 14 inches in size, and being richly varnished and printed on heavy bristol board, do not require glazing. They come in pairs, one picture of each showing a party before an accident and the other after it.

An inspection of McCarty & Hasberg's warerooms, finds that their stock this year is far superior to that of any previous effort. The firm has added many new lines of goods, and the display is certainly magnificent. In future issues of THE STATIONER detailed accounts will be given of these lines. The trade should see the stock without delay.

McLoughlin Brothers have just published a set of toy books, called the "Sunshine Library." It comprises four little books, each containing several short stories and forty-eight illustrations, printed in colors. They come in handsomely bound covers, rich in gold and colors. These books are neat in style, and contain such interesting matter, that they will in all probability prove very entertaining to children.

J. H. Bufford's Sons have this week added several new designs to their already large line of plaques. Some of them represent children's heads surrounded with leaves and flowers, two on a gold ground, showing heads representing night and morning; and another, which is rather significant, shows a young negro's head, surrounded by a water-melon. Among the other designs are tropical birds on boughs, covered with flowers. The firm is very busy.

The Acme Stationery and Paper Company is doing a very active trade in its American blotter tablets, being kept so busy that it is compelled to work its employees late at night. Buyers intending to place their orders are asked to make no delay, otherwise they may have to wait to have them filled. The company's perfect pencil tablets are literally being sold by the ton. If there are any in the trade in the United States who have not seen these goods, they are requested to send for samples and prices.

W. J. Anderson has just returned from a very successful business trip in the West and Northwest, and reports trade everywhere he went as very promising. He has orders already in hand to keep him busy for a month to come. He makes a specialty of blank notes, drafts and receipts, reward cards, marriage certificates, gum labels, seals, merchandise and shipping tags. He has made a new departure in not employing any traveling salesman, and is catering to the jobbing trade exclusively.

E. C. Linde, who represents his brother, J. E. Linde on the road, has just returned from an extended Western trip, and reports that he has done more business on this trip than in two previous seasons together. He will now enjoy a short vacation, which he richly deserves, and then look after his home trade, which has naturally been neglected a little during his absence. After an inspection of Mr. Linde's samples, his success is not to be wondered at, as he has one of the prettiest lines of goods which has yet been shown. In addition to cardboard of the staple grades and complete lines of visiting cards, he has a beautiful display of chromatic cards and shape novelties, designed by first-class artists and printed in the best manner by competent lithographers in as many as fifteen or sixteen colors in a great many cases. Among the cards which deserve special mention are No. 38, representing a basket of flowers in fourteen colors; Nos. 47 and 87, little girls' heads in two sizes and fifteen colors. These are very natural, every line and feature of the pretty faces being drawn and printed with rare effect, clearly showing artistic taste as well as full knowledge of proper use of colors in producing desirable effects. No. 80 is in four designs, representing vases with roses. They are copies of a series of very popular imported birthday cards. They are printed in fourteen colors, and are so well reproduced that it is almost impossible to detect any difference. The first edition of these has been entirely sold out and a second edition is now printing to fill orders. No. 48, in four designs, is also very fine, being winter landscapes, showing an expanse of country in the depth of winter. Everything is covered with ice and snow, the houses are almost buried under it, while in the foreground are members of the feathery tribe in their bright plumage, looking sadly at the dreary scene of their once sunny summer-houses.

Willy Wallach has just published a new and elegant line of fancy cards, some of the designs being intended for birthday and the others for valentine purposes. They are all richly and elaborately finished, and are likely to meet with much favor. The ground colors are produced in the richest tints, while the illuminations are such as to produce the best effects. Among the numbers specially noticeable are 120, 124, 126, 129. No. 120 shows pansies and roses on a sky ground; 126 is illuminated with figures surrounded with flowers of various hues; 129 shows flowers beautifully intermingled with green leaves, while the shadow of all is cast on the card; 124 is illuminated with figures dressed in the style of Louis XIV., coqueting in richly furnished apartments. Among other designs are gold bric-a brac crosses surrounded by garlands and wreaths of flowers; baby cards, which show children in rich costumes and in playful attitudes; and perhaps one of the neatest in the market is one with a rich mixed silver and copper ground, illuminated with floral designs of rare beauty.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, August 30, 1882.

THE MONEY MARKET.—The money market shows little change. The local bank reserves last week were again reduced a little, but these institutions still hold $1,581,500 more specie and legal tenders than at the corresponding time of last year. The stock market continues quiet and featureless, there is still a conspicuous lack of outside orders; prices show little change. Government bonds continue firm under a good demand and small offerings. Railroad mortgages are irregular and dull. Foreign exchange remains quiet and firm at the late advance.

THE PAPER MARKET.—The general features of the paper market are much the same as noted last week. While our city dealers continue to report a very fair summer trade—in fact, the best that has been experienced in years—manufacturers appear to be well employed on orders, and some dealers find this so generally the case that they experience delay in getting their orders filled at the mills. This condition of the trade is due in a great measure to the drought, which has been the means of imparting the firm and steady tone to prices which have ruled during most of the summer season. The manilla trade is more encouraging than it has been, some of our dealers reporting an improved demand within the past week, and former prices are more easily secured.

THE STATIONERY MARKET.—Trade has made additional headway during the week covered by our review. Quite a number of buyers from the South and West who sought the seaside, the mountains, and other places of pleasure resort during the excessively hot weather have returned to the city, and many of them have given large orders this week. Every branch of the trade seems to share in the present activity, although the fancy goods line shows the greatest amount of life. In this branch some houses assert that they could do a great deal more business if they had the goods, and stocks with most of them are already beginning to run short. Orders by mail continue large and frequent, and the whole situation presents a very favorable outlook. Prices, as a general thing, are quoted steady.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

THE GREAT ERIE RAILWAY,

LANDSCAPE ROUTE

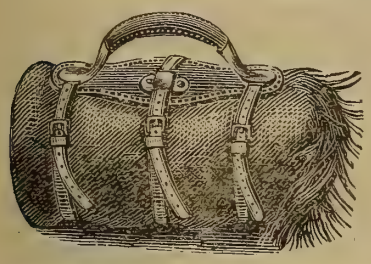
OF AMERICA.

E. S. BOWEN, General Supt., New York.

JNO N. ABBOTT, Gen. Passenger Agt., New York.

FLEXIBLE GLUE.

A correspondent gives the following recipe for what is thought to be the best flexible glue or composition for pads yet invented :



Dissolve one pound of good glue in water, after the usual manner. Take four ounces of arrowroot and mix with cold water to the consistency of cream. Stir this into the boiling glue and mix well. Then stir in two and a half ounces of glycerine, which also mix thoroughly. Add half an ounce of carbolic acid, and color with aniline to any desired shade. Apply lukewarm with a flat brush.

A CONVENIENT CHESS BOARD.—An iron chessboard, provided with magnetic chess-men, is a Berlin novelty. The small magnets concealed in the figures cause them to adhere to the iron board and retain their places in spite of considerable shocks, such, for instance, as are received on shipboard or on railway trains.

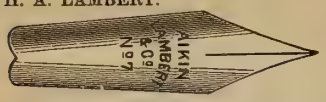
ENGLISH HAND-MADE PAPERS

ORIGINAL EYNSFORD MILLS,

WATER-MARK:

"FELLOWS"



KENT, ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers for Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

Proprietor: JOSEPH ARNOLD, Eynsford Mills, KENT, ENGLAND.

COLORING WOOD.

The following process for coloring wood has been patented in Germany by A. Thim, of Berlin: The wood is covered with solutions of metallic salts by means of a brush or otherwise. It is then left to dry for about twelve hours, and is then taken into an air-tight room, in which gases or vapors are introduced, such as sulphuret of hydrogen, ammonia, &c., according to the tint required. The following colors can be obtained: Brown, sulphide of bismuth, formed from nitrate of bismuth; yellow, the sulphide of cadmium, formed from solutions of cadmium sulphate, gold yellow, bisulphide of tin, from solutions of chloride of tin; iron gray to brown, sulphide of lead, from solutions of acetate of lead; green, oxide of chromium, from solutions of chromic acid; red, trisulphide of antimony, from antimony solutions. The process is said to be cheap, and the wood can be colored to any design. The colors obtained are not affected by air, light or water, and can be washed. A very cheap solution of hydroxide of iron in chloride of iron is used to impregnate the wood for floors, stair treads and other objects exposed to much wear, and then colored with ammonia. The wood in this case is less apt to burn than when painted in the ordinary way.

A FESTAL DAY.

On Thursday last the firm of Hard & Parsons and its numerous employees held "high holiday" and had a festival at New Washington Park. It is a noticeable mark of advance in a New York stationery firm's manufacturing importance when its employees enter upon a series of annual picnics and summer-night festivals. The event of Thursday last may, therefore, be looked upon as a milestone in the progress of a successful house. The firm of Hard & Parsons, although young compared with other houses which have been in the same line of trade, is well known to stationers throughout the country, and its goods have found a market wherever energy and style could carry them.

The suspension of business for one day last week was therefore in the nature of a celebration and was commemorative, in one sense, of the founding of the house. The festival was opened at 2 o'clock P. M., and was prolonged until 2 o'clock in the morning. The afternoon proceedings were of a purely social character, and the grand "Owl" march was inaugurated at 9 P. M., with upward of three hundred couples on the floor. The music, by Professor Boswald's full orchestra, was excellent. The dancing programme was inclosed in an elegant envelope, and was one of the handsomest and most expensive orders of dance yet issued, and will be preserved by many in commemoration of the event. It was elegantly printed and inclosed within gold-beveled, cream cardboard covers, handsomely corded and tasseled. On the front cover was a design printed in appropriate colors and of the character of the illustration given herewith. The owl, it will be remembered, forms part of the trade-mark of the house. The management of the festivities was orderly and commendable, and the activity of both members of the firm evinced a commendable interest in their employees and their enjoyment. The evening was cool and delightful for dancing, and a brilliant moon gave a delicacy and refinement to the surroundings quite in keeping with the character of the house which celebrated its festival.

A peculiar feature of the order and the evening was the P. D. Q. waltz, in honor of Mr. Alfred, Western agent of the house, who, when sending orders during the recent freight-handlers' strike, never forgot to attach these initials. Wm. Connor led the grand march in a style which elicited much encomium and was a marked feature of the occasion.

Where Have You Been Owl Night?

BRONZE GILDING.

William Brown, the well-known painter of circus chariots, describes in the *Coach Painter* a good practical process for fine gilding with bronze powder:

"First of all the size must be properly prepared; if it be 'oily' or too slow in setting or hardening, the bronze powder will be 'drowned,' that is, it will sink under the size and all its impurities will cover the surface, causing it to appear muddy or dark. Quick size is therefore best, and it may be made by mixing any good rubbing varnish with a little japan, say two spoonfuls of varnish and one spoonful of japan to a sufficient quantity of chrome yellow (dry) to form a semi-transparent paint; add a few drops of turpentine to cause it to flow freely from the pencil.

"The next in order is the bronze; a cheap, coarse quality of bronze should never be used, as it is not only poor economy, but fine work cannot be done with it. The best bronze is not required on ordinary work—a good medium quality of deep gold, costing about sixty cents per ounce, will give excellent results. It may be tested on the finger-nail as to its fineness, and any that will not readily adhere and which rolls off in fine grains, should be avoided, for the fine powder will cover five times as much surface and make a good job. The size and the bronze being at hand, the surface, if a wagon or car panel, should be nicely rubbed with pumice-stone and washed clean, then, with a pounce-bag filled with whiting, go over all parts to be gilded or lettered, striped, &c., and have a good film of whiting dust thereon to prevent the bronze from sticking to any part not sized. Next draw the stripes, letters, or whatever with the size, being sure not to put the size on too heavy to cause 'fat edges.' When the size is very nearly dry (it should be a little drier than the size for gold leaf), rub the bronze on plentifully, using a piece of velvet, plush, or chamois rolled up into a sort of puff-bag, as a rubber. As soon as this is done, wash all nicely with clean water and dry off. Then (and this is one of the most particular features in making a brilliant and durable job) run over all the gilded parts with a pencil dipped in white spirit copal varnish, or in French shellac varnish, either of which will dry in a few minutes, and thus you seal up the gold bronze from the action of the varnish with which the whole job is to be coated, and particularly when English varnish is used; for there is an acid in the varnish which produces verdigris, and that is what turns the bronze green. The spirit varnish protects the bronze from this acid, and also binds it to the size, so that when varnishing none of the powder will be dragged off to disfigure the ground. Follow these directions and you may be able to use bronze in place of leaf on many jobs with the assurance that 'nobody can tell the difference.'"

Aiken, Lambert & Co. have recently brought out several new designs in pencils, all of which are richly and elaborately finished. The firm is is at present very busy in all of the lines it handles.

IMITATION MARBLE.

George Grossheim obtains imitation of marble veins by the following process: A plate, well polished, or a stone roller (limestone, &c.), is covered with a layer of oil-color. For the oil-color, wax, fat, &c., can be substituted, or other substances which are not acted upon by acids. In this layer the design is drawn by means of a pin, so as to expose the stone. An acid, such as hydrochloric acid, is then made to act on the stone, which etches the parts which are not covered.

The layer of oil-color or wax is now removed, and the stone is well cleaned. It is then covered with the color for printing, and while this is still wet it is scraped with a knife, the color being thus taken away from all the parts of the stone which have not been touched by the acid, only the depressions of the design retaining the color. Elastic rollers are now used for taking the colored design off the stone, and to carry it on the material which has to be printed or colored. The elastic roller, being rolled over the stone plate or cylinder, takes all the color away from it and retains the design, which it transfers to the material which has to be printed. Metals can be substituted for the stone in this process. The same inventor uses similar methods for obtaining ornaments on books and for imitating the lines of wood for decorations.

The edition of Walt Whitman's "Leaves of Grass," about which so much has been written on account of the abandonment of its publication by a Boston firm in consequence of Anthony Comstock's allegations that it contained objectionable passages, has been issued by Rees Welsh & Co., Philadelphia. The book contains so much true poetry, so many passages which stamp their author as a true poet of a high, though certainly not of the highest order, that it is a pity that Mr. Whitman's own good sense has not moved him long ago to cut out the "Children of Adam," words and lines, which add nothing at all to the beauty of his work and which certainly are not structural and vital to it. The author of such a poem as "O Captain, My Captain," does himself injustice and puts himself at a disadvantage most unnecessarily and most cruelly by flying in the face of decent public opinion. Walt Whitman's personality is too sweet and sound and clear to be put by a mere piece of injudiciousness at so great a disadvantage as that under which a few expressions in his poems—wantonly and wilfully kept there against the advice of his best friends—cause him to labor. He will not expunge them himself, and therefore he must pay the penalty; but after he is dead they will be blotted out of editions, for lovers of the good man will be sure to do for his fame that which he himself has—we are sure, foolishly refused to do for it.—*Graphic.*

J. K. Gill, of J. K. Gill & Co., Portland, Oregon, arrived here this week from Europe. He was accompanied by his brother, Professor Gill.

"ABROAD."

Owing to the great success of **"At Home"** last season, we have this year issued the **New Art Gift Book—"ABROAD"** —for the Holidays; to be of uniform size and a companion piece of **"At Home."**

"Abroad" far surpasses its companion both in **Decoration and Illustration.** Each page being a study in itself. The quaint little English Children are in this Book represented on a tour of pleasure through France. Those who have been "Abroad" cannot fail to recognize the beautifully executed drawings of places of interest. The appropriate verses accompanying each illustration make this work a handsome memento and Holiday Gift. Decorated by THOS. CRANE. Illustrated by ELLEN HOUGHTEN.

Price, $2.50. "AT HOME" published this year at $2.00.

JAPANESE PORCELAIN MARKS.

The oldest porcelain of Japan is that known as Hizen ware, into which province the manufacture was introduced from China in 1513, and examples of this variety are frequently marked with sprays of flowers and the peony ("botan"), the chrysanthemum ("kiku"), the clove ("chôji", one of the "seven treasures"), the hyacinth ("suisen"), or the wild-cherry ("sakura"). In addition, counterfeit imitations of Chinese marks were and still are used, especially the characters representing the Ming dynasty (A. D. 1368–1643) and the existing T'sing dynasty. Where the name of the maker is recorded the porcelain is almost certainly of the last fifty years' manufacture. As a rule, the older and better the work the less fuss the craftsman made about it; content with the joy of artistic creation, he was little anxious to hand down his name to posterity. The celebrated Satsuma faience, Mr. Satow tells us, was first made by Coreans, brought over by the feudal lord of that province toward the close of the sixteenth century. The ware was manufactured for the use of the Prince himself, and for presents to the Shôgun and great nobles; hence the extreme perfection to which the art, thus fostered, attained. The descendants of these Corean potters still form the population of the village of Tsuboya, some twelve miles from Kagoshima. Up to a few years ago they wore the hair bound up in a knot at the top of the head, according to the Corean fashion, and on certain solemn occasions donned the national costume. They retain a knowledge of the Corean language, and consider themselves superior to the native Japanese, and until lately were Buddhists, but are now under the protection of an official Shintô god. Marks are not common on Satsuma faience; the most usual is the badge or crest of the diamio, a cross within a circle. Kaga pottery is distinguished by marks reading "Kutani," or "Nine Valleys," the name of the district in Kaga where the ware was first made. The gilt examples of Kaga are of comparatively recent date, and those marked with the names of the makers are quite modern. The Kiyôte manufacture dates back to the middle of the sixteenth century. The earliest specimens have the simple mark "raku," "enjoyment," which was used by eleven generations of the descendants of Chojiro, the founder of the art at Kiyôto, and the son of a Corean who settled there in A. D. 1550. Other very usual marks are "Yeiraku," "everlasting enjoyment," the family first employing which is still represented, and "Kinkôsan," "Mount Kinkô," which, with "Tanzan," "Red Hill," distinguish what is known as "Awata ware." On faïence the marks were generally impressed, on porcelain painted. The crown stoneware of Owari is the oldest known pottery of Japan, exclusive of the rude ware found in the shell mounds. Examples marked with a shell (sp. of Venus) are stated to date back to the middle of the fourteenth century. The best known variety of Owari porcelain is the modern "sometsuke," or "colored" ware, delicately painted in blue under the glaze. Seto is the principal seat of its manufacture, and the characters of the name are commonly found upon specimens, together with the name of the maker, and perhaps a descriptive legend or Chinese phrase. Isé ware may be known by the characters "Banko," meaning "forever," usually impressed upon it, and frequently displays marks signifying "good luck," "prosperity," "wealth," "long life," &c. A common legend is one which may be translated, "May you enjoy the long life of the pine-tree, and the old age of the stork."—*The Spectator.*

BYRON WESTON

DALTON, MASS., U. S. A.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

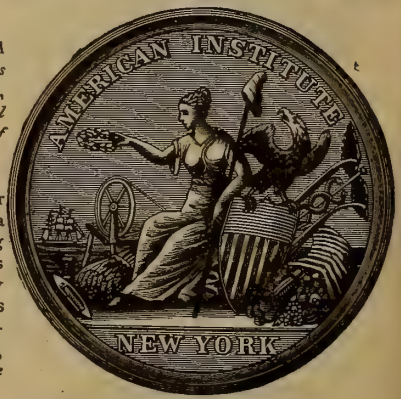
Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD AND LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.



—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**
Each sheet is water-marked with name and date.

"The Stationer"—Every Thursday—$2.00 Per Annum.

VOL. XII.---NO. 10. NEW YORK, SEPTEMBER 7, 1882. WHOLE NO. 376.

Correspondence.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, Mass., Sept. 5, 1882.

Sympathizing with other departments of trade, the stationers' trade has become more active, and in some lines the activity is marked. The general outlook is good, and grumblers are scarce. The continued low water in many of the streams of New England is interfering somewhat seriously with the paper mills; but as most of those of note have also steam power, the drought is defied, and the manufacture of goods keeps right on.

A comparison of notes shows no material advance in general prices. On the contrary, prices remain about the same, and no advance is looked for in any special line.

A run among the principal dealers shows that everybody has returned to the city recruited, full of vim, and ready to sell all the goods they may be called upon to show. A large trade—larger than that of last year—is confidently expected; but if it does not come there will be a grand disappointment all round.

The manufacturers of art novelties, as usual, are driving business—driving is the proper word. I never knew anything before like the present activity in this line. And it shows that the masses are being rapidly educated to invest money in the artistic, yet we in this country are still far behind the people of some European countries in respect to the practically æsthetic and beautiful.

Our dealers are well stocked up in all lines, particularly novelties, of which there appears to be legion; but there are no useless productions in this respect. The leather product in stationery goods has become wonderful, and imitations are almost equal to originals.

A large retail trade is now in order, the crowds having returned to town and the schools having commenced again. Next month will begin the exhibitions of holiday goods. In the card line the lines promise to be especially varied and artistic. Several leading dealers here are already making special preparations to meet the prospective demand for cards.

There has been no change in the *personnel* of the trade during the past summer, and no changes are likely to occur in the near future that I know of. The trade here is as changeless in its location and make-up as it is congenitive in its transactions and habits.

Lieutenant-Governor Weston, the great paper maker, has just returned from his brief European trip. He may be the "dark horse" in the impending gubernatorial contest at the Republican convention.

The *Advertiser* people expect to get into their new tall building by December 1.

The daily one-cent *Star* has a new manager and twinkles brighter than ever. L.

CINCINNATI CIPHERINGS.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, September 4, 1882.

Only one hope and faith prevails here as to the business prospect for this fall. There was never a stronger concurrence of feeling on that point. A dissenter from this popular faith would be looked upon and treated as a heretic. You would listen in vain for a hollow note from those amphibious fellows who make the air shiver sometimes with their discordant croaking. There is nothing of that sort visible, audible, or tangible here just now. The thing is quite impossible. It is at utter variance with the prevailing tone of feeling and absolutely incompatible with the ruling passion of the hour. You might as well suppose a man capable of raging and joking in the same breath as imagine lack of spirit or hope in a Cincinnati dealer, tradesman or manufacturer in this September month of 1882. The existence of a personage here in a dispirited state of mind is about as unthinkable as "a limited infinity," or any other absurdity. It is all gleeful hope just now. What the future holds hidden may modify or turn this sanguine tide. That is a fact attested by experience, but it is a small factor in the probabilities as to the immediate future, and it is neglected for the moment by the trade. The man is blind who doesn't see a rush commercial in September and October for the local trade in Cincinnati. That's the whole matter in a pea-pod. There is not a mite of wildness in the feeling. Good crops have made the country rich. No excursions have come here during the summer. People from the country want to make the trip, and they are coming to the Exposition with pockets full of money—a very sensible thing for them to do.

Tytus' paper mill, at Middleton, was treated to a nice little explosion one day last week. The damage was not serious, but the delay was disagreeable. All of the mills in the valley are busy, on full time. By the way, the Tariff Commission is here to-day, and will be here to-morrow. The paper-mill men will also be here in full force. I don't know how they stand on wood pulp, but the *Commercial* says that one of them (the paper manufacturers) complains that he has to pay 42 per cent. on his imported wood pulp, made in Norway, and it adds, by way of suggestion, that this tariff is doubtless meant for the protection of American forests. I don't know how the mass of paper manufacturers here feel on this question. I must find out immediately. I don't know whether they are heretics on it or not; they will doubtless be heard from. A large number of the Cincinnati paper manufacturers and manufacturing stationers are members of the Board of Trade, which is composed of men engaged in all sorts of creative industries and which has pretty stiff opinions on the tariff question, and will not be slow in uttering them. Now, bear witness I have not compromised myself in the above utterances or compromised any one else. The statement is comprehensive and correct, and it commits no one to either side of this much mooted and tooted subject.

Charles Stewart returned from the East, but did not remain here long enough to put his war paint on. He went right back. John Holland will be here this week, and so will J. R. Mills, if both of them are not here this minute. They haven't reported to "Prince William," and that is sufficient ground for inferring that they are absent still.

By the way, Alexander Hill, of Robert Clarke & Co., is one of the Rugby Library Committee. Some Boston people, at a supper given to Thomas Hughes, author of "Tom Brown," conceived the idea of giving Rugby Colony, on the Cincinnati Southern Railroad, in Tennessee (on top of the Cumberland Mountains) a library in honor of its founder and their guest, Thomas Hughes. Their conception is soon to be realized. About $5,000 has been raised for books, and about half as much more will be raised for a building. Robert Clark & Co. will furnish a large quantity of the books.

Samuel Totum, a manufacturer of a certain line of stationers' goods, namely, letter presses, occupies many positions of honor here in which business capacity and public spirit are required. In fact, many of the men in the paper and stationery business here are leaders in all sorts of measures requiring public spirit, and that is something in a city noted for its men of public spirit and municipal patriotism. "Billy" O'Neil, of J. R. Mills & Co., has been for many years a member of the Board of Education, and a very troublesome one to his enemies. Charles Wilstach, deceased, did more than any other single individual, living or dead, to kindle here what now seems to be an immortal Exposition fire.

This letter would be incomplete without some mention of so great an event as an exposition, and the more so of such an exposition as the coming one is to be. W. B. Carpenter & Co. will have a fine ruling machine turning off work

in it. Two or three paper-box manufacturers will have exhibits. There are several entries of blank-books, chiefly for exhibition only. Those who come to this exposition as competitors must do their best or fail. They will have sharp competition.

The Cincinnati expositions have had a permanent, pronounced influence upon not only Cincinnati, but upon the entire great, rich, populous region tributary to it. This present Exposition, the tenth in the series, which opens September 6 and closes October 7, will be fuller, more varied and more brilliant than any of its predecessors, and for no other reason so much as for the reason that it has had nine predecessors. The method of displaying goods has, under the tutorship of these expositions, become a fine art, and has gone into the business houses and stores and warerooms not only of Cincinnati, but of all the region round about. The Patent Office at Washington has records of numerous issues of patents to inventors who received their stimulus and inspiration in the Mechanical Hall of Cincinnati expositions. Consumers have come here and seen for themselves the best products of the best artisans of the country, and, as a consequence, have gone away with a higher standard in their own minds. All classes of manufacturers have felt the effects of this influence in the diffusion of a demand for better products. The effect is to be seen all over the country in better and prettier machinery, better architecture in the dwellings, more individuality in household decoration, and a more wholesome and simple taste in all the surroundings of domestic as well as of business life.

PRINCE WILLIAM.

LUCKHARDT PROCESS OF PHOTO-ENGRAVING.

The negative of a photograph is coated with yellow varnish, and the portrait etched with the needle on that ground. The yellow varnish, consisting of common negative varnish, to which a suitable quantity of aniline yellow has been added until it has assumed a dark sherry color, may be graved very well for a few days; but the older the varnish film the more brittle it becomes, and, therefore, a few drops of castor oil are added to it to render it elastic. The action of light upon sensitive paper placed beneath the negative is effectually suspended by the yellow varnish, so that only the transparent lines, produced by the graver, print. When once the principal lines of the original picture have been faithfully laid down, even an untaught draughtsman may produce an engraving of the portrait that shall at least have some resemblance; while a draughtsman skilled in cross-hatching as a zylographer should furnish a work which, placed beside a good wood-cut, should exhibit a superiority recognizable even by an unprofessional eye. Besides the rapidity with which the engraving can be made, the possibility of the utmost correctness is offered, since lines which have been too deeply graved, or wrong lines may be filled up again with yellow varnish and engraved anew, a printing frame and silvered paper offering a convenient method of watching and controlling the process of the work. Where broken lines are desired, a pencil may be passed over them, or they may be pricked, &c. By transfer paper an impression from an engraved, yellow-varnished negative plate may be transferred to zinc, and in this way a plate suitable for printing with the letter-press printing press will be produced. A portrait of the President of the Photographic Society of Vienna was engraved in about an hour. The faultless zinc *cliche*, says the *Photographische Correspondenz*, from which this account is condensed, is produced in a surprisingly short time, so that a negative, the engraving, and the *cliche*, ready for printing from, may all be produced with ease in a single day.

CUTTING STITCHED BOOKS.

The following is a description of an invention provisionally protected by M. Robert Soderstrom, of Upsala, Sweden, but which has not been patented, and is, therefore, open to general adoption. It is designated as a new apparatus for cutting the leaves of stitched books. This apparatus is constructed as follows: Two posts or standards are connected together by a guide and base plate. On the guide is mounted a movable slide to which is fixed a cutting instrument consisting of a round, sharp-edged knife or plate. A cross-bar is adapted to slide up and down in the posts or standards, and to be pressed downward by the action of pressure screws in the said posts or standards. In using the apparatus the stitched book to be cut is placed on a board between the base-plate and the cross-bar, and is fastened down firmly by means of the pressure screws. The slide with its knife is then moved to and fro on the guide by hand until the edges of the book are removed, leaving each leaf free. On the guide is placed an adjustable stop which may be fixed in any required position thereon, according to the length or breadth of the book to be cut, so that the stroke of the knife may correspond thereto. A spring is adapted to press the knife against the book. By this apparatus, the leaves of books may be cut in much less time than by cutting each leaf separately.—*British and Colonial Printer and Stationer.*

CEMENT FOR GLASS AND METAL.

Everyone who uses brass letters on glass windows, and knows how often they drop off from unequal expansion or from the too energetic efforts of window-cleaners, will be glad to have the following receipt:

Litharge.....parts.	2
White lead.....	1
Boiled linseed oil.....	3
Gum copal.....	1

Mixed just before using, this forms a quick drying and secure cement.—*Chemists' Journal.*

To give an appearance of copper to zinc a solution of 15 parts sulphate of copper and 19 parts cyanide of potassium is prepared. To the solution are added 160 parts pipeclay. A half-fluid mass is thus obtained, with which the object to be coppered is rubbed after having been well cleansed. For bronzing, a mixture is prepared with 15 parts verdigris, 19 parts cream of tartar, and 30 parts soda crystals. The mixture is dissolved in sufficient water, and 160 parts pipeclay are added. This mass is applied as stated.

TO WRITE, GILD AND ORNAMENT ON GLASS.

Before you commence this work you must acquire a thorough knowledge of sign writing, otherwise it would be folly to attempt it. You will require a drawing on paper for each design, which you will prepare as follows: Cut a piece of thin paper to the size of your glass, draw out your design correctly in black lead pencil on the paper, then prick through the outline of the letters with a fine needle. Tie up a little dry white lead in a piece of rag; this is a pounce bag. Now place your design upon the glass right side up, and dust it with the pounce bag; take the paper carefully off, and the design will appear in white dots upon the glass; this is to guide you in laying on the gold on the opposite side. Now clean the glass well on the side that the gold is to go on; prepare your size in the following manner: Get some perfectly clean water, without the slightest particle of grease or other foreign matter; put it on a slow fire to boil, using an enameled saucepan for that purpose, and taking particular care the smoke does not get into it; while boiling, put in two or three shreds of the best isinglass; let it boil a few minutes, then strain it through a fine, clean linen rag; when cool it is ready for use. The great point in glass gilding is to have the glass, the size, and everything you use perfectly clean; a touch of the finger on the glass will tarnish the gold; you must use the tip and cushion to put on the gold, laying the gold on as level as possible, as its uniform brightness depends in a great measure upon that point; use a flat camel's hair tool for laying on the size; flow the size on and let it drain off when you put gold on; when perfectly dry, take a ball of the finest cotton wool and gently rub or polish the gold, you can then lay on another coat of gold if desirable, it is now ready for writing. As the letters will have to be written the backward way, you must turn your drawing face side downward and pounce as before; but on the gold this time mix a little of the best vegetable black with black Japan; thin with turpentine to a proper working consistency; write with this when thoroughly dry; wash off the superfluous gold and shade as in sign writing. In ornaments you will have to etch or shade the gold, proceed to lay on the gold and pounce the ornament exactly as above; then etch or shade it with the point of a slate pencil or a piece of hard wood, when you want a broad or black line; then pick in with black.—*Varnisher's Companion.*

Brunswick black, thinned down with turpentine until it has attained the right tone and color, will, if a little varnish is added, about one-twentieth of the bulk of the black and turps, prove a stain for imitating walnut or teak wood. There is no difficulty in getting the mixture to dry hard, and it will take varnish over it first class.

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

THE previous success of our Cards, it is confidently expected, will be fully sustained, if not increased this season, an expectation which is already verified by the large advance orders received, justifying our increased efforts to bring out a line superior to all our previous productions. Our line will again comprise Double and Fringed Cards as well as Heavy Mounts. All the Fringed Cards will be provided with protectors, and envelopes will be furnished for all cards costing $1.80 and upward. The names of the artists who have contributed designs are a guarantee of the excellence of our Cards. We will name only the following :

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,

MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

The literary matter in connection with our designs has been carefully attended to, among others, by MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

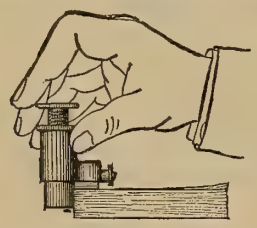
Very truly,



John Wilson's Sons

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

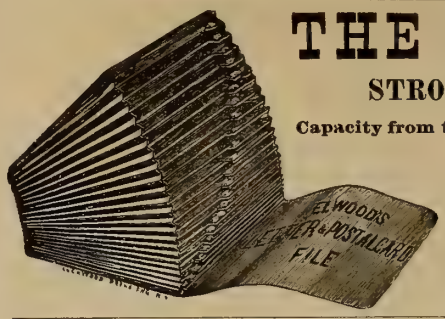
PAMPHLET-COVER ROLLER.

A new tool for pressing the covers, after being pasted, to pamphlets is illustrated. It consists of two rollers secured at right angles in a suitable frame. One of the rollers is made to project beyond the other to any required distance for the purpose of bringing the two faces of the rolling surfaces in contact with the edge and side of the work to be done, one of the rollers being made adjustable to suit the width of the work. Heretofore, in pasting the covers to

pamphlets, after the edges and a portion of the sides of the pamphlet have been provided with paste, the cover has been applied, and the portion pasted has been rubbed down by the thumb and finger in close contact with the pamphlet. This tool is intended to perform this duty with more precision and to prevent injury to the fingers.

The operator takes hold of the handle and places the two rolls in contact with the edge of the pamphlet and its upper side. Then, with the required pressure, the instrument is moved back and forth until the surface of the cover is properly smoothed and pasted to the pamphlet, after which the pamphlet is turned over and a like operation is performed upon the other side. A screw permits of the proper adjustment for pamphlets of any thickness. W. H. Rohrer & Co., Washington, D. C., are the manufacturers, and J. L. Shoemaker & Co., Philadelphia, are the agents.

NEW PATENTS.



No. 262,749. Jewel Case.—Jean Marie Douarin, Paris, France. Patented in France May 8, 1879, No. 130,545.

The combination, in a jewel case, of a shell composed of two pieces of sheet metal stamped into shape, and each having integral with it a portion of the hinge of the case, one piece forming the bottom and the lower portions of the sides of the case and the other piece forming the lid and the upper portions of the sides, and a cartouche made of sheet metal stamped into shape and projecting above the portions of the sides of the shell which are formed integral with the bottom.

No. 262,757. Slate Attachment.—John Fowler, Louisville, Ky.

No. 262,778. Delivery Apparatus for Printing Machines.—Berthold Huber, Taunton, Mass.

The combination, with the cylinder of a printing press adapted to rotate at the time the sheet is taken by the delivery apparatus, of delivery-grippers which are adapted to move toward and from the cylinder in a horizontal plane parallel with the axis of the cylinder, and which in their movement toward the cylinder are carried past the position at which they take the sheet, and which are started in their movement in the direction requisite for carrying off the sheet before they arrive in the position at which they take the sheet.

PAPER TRADE REVIEW.

Consists of Sixteen pages, size of this Newspaper.

EVERY THURSDAY, Post Free, $3 a Year

Remit Greenbacks or Post-Office Order. EDITOR AND PROPRIETOR *W. JOHN STONHILL.*

PAPER MARKETS:—Mill News—Trade Gossip—Samples of Paper—Technical Articles—Record and Illustrations of New Patents—Descriptions of Factories—Letters every week from Paris, Berlin, Vienna and other countries—Market Prices—Gazette.

STATIONERY:—Novelties Illustrated and Described—Technical Articles—Stationery in the Provinces—American Notes—Colonial Reports—Industries of the Trade—Reviews—Gazette.

PRINTING:—Doings of the Craft—Printing in the Provinces—Colonial Intelligence—Foreign News—Criticisms on Specimens—New Machinery—Type Specimens—Original Trade Technical Articles—Descriptions and Illustrations of British Establishments—Letters from our Correspondents, and every item of news concerning the trade during the preceding seven days.

The B. and C. P. and S. has corresponding representatives in North and South America, Canada, East and West Indies, Australia, New Zealand, Tasmania, India, China, Japan, Constantinople, Turkey in Europe and Asia, Russia, Austria, Germany, Italy, Spain, Holland, Belgium, and France; letters from whom appear periodically.

"The amazing industry and excellent tact of the conductor, Mr. Stonhill, is apparent even on a superficial glance over its pages."—*Mackellar, Smiths & Jordan* (Phila.).

"The recognized organ of the Paper and Printing Trades."—*Belfast News-Letter.*

"It has features of enterprise unusual to European Trade journalism."—*American Stationer.*

"The notes upon Trade cover the entire country and the Colonies."—*London Figaro.*

"There is an American touch about the paper."—*Leigh Chronicle* (Eng.).

"In the matter of printing it is PERFECT."—*W. and A. K. Johnston* (Edinburgh).

"The very best journal of its class that finds its way to our table."—*James D. Whitmore & Co.* (N.Y.).

Advertisers will see that it is better for them to pay fair charges to a Journal which covers the whole of the commercial world, than to pay less sums for advertisements in journals whose circulation is limited to one country, one town, or possibly one parish.

A CARD.

AS there has been some feeling amongst the Trade that Messrs. RAPHAEL TUCK & SONS' Cards would be injured by their being obtained direct and offered cheaper by other than us, we publish the following received in reply to cables:

LONDON, May 9, 1882.

FORBES COMPANY, Boston—No Cards of ours will reach United States excepting through your agency.

RAPHAEL TUCK & SONS.

As this wire was received some four months ago, we desired a confirmation of the same, which was received to-day:

LONDON, September 1, 1882.

FORBES COMPANY, Boston—You may fully rely none of our Cards will reach States excepting through you.

RAPHAEL TUCK & SONS.

We trust this will be ample assurance to the Trade that the great popularity of these Cards will not be injured by a cutting of prices.

FORBES COMPANY, Sole Agents for the United States.

Boston, Sept. 1, 1882.

MANUFACTURERS OF

IMPROVED MACHINERY AND TOOLS,

—FOR—

Bookbinders, Printers, and Paper-Box Makers.

$35.00 PERFORATOR.

ROUND HOLE, HAND OR FOOT POWER.

This Machine has been long wanted in the trade for Printers, Bookbinders, Lithographers, &c. The price will enable all concerns to do their own perforating. This Machine will allow any size of paper to be perforated without folding, and will do as perfect and as rapid work as any other machine made. It makes a round hole same as on postage-stamp sheets, will perforate 14 inches long. The needles are in sections, thereby saving a great cost in replacing the needles, and there is no taking out of needles for the stubs in check-work, &c, which saves great time. Can be run by foot-power if desired.

Price, 14 inch Hand, Wooden Table, $35.00 | Price, 14 inch Foot, Wooden Table, $45.00

Iron Table Extra, ... $10.00

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

L. G. Crow, newsdealer, Irwin, Col., has sold out.

A. H. Goetting reports business as being excellent.

Hammerbacher & Co. succeed Moeller & Co., bookbinders, St. Paul, Minn.

M. E. Hill, dealer in fancy goods, Bridgeton, Me., has sold out to P. P. Burnham.

J. M. Ranard, dealer in fancy goods, Petaluma, Cal., is advertising to sell ont.

S. E. Avery, of S. E. Avery & Co., dealers in fancy goods, Chicago, Ill., is dead.

The *Transcript* Publishing Company, Lexington, Ky., has sold out to D. E. Caldwell.

West & Ogden, dealers in fancy goods, Rochester, N. Y., have dissolved partnership.

Francis B. Mohun, bookseller and stationer, Washington, D. C., is advertising to sell out.

A receiver has been appointed for Thomas Cassello, paper stock dealer, New York city.

D. F. Wheaton, dealer in notions, Saline, Mich., has been burned out. Loss, $700 ; insured for $325.

The *Vox Populi* Printing Company, Pueblo, Col., has advertised its stock for sale on chattel mortgage.

The stock of F. McCrellish & Co., publishers of the *Alta California*, San Francisco, Cal., has been attached.

The style of Duncan McGregor, bookseller and stationer, Halifax, N. S., has been changed to McGregor & Knight.

Bautz, Clayton & Burton, lithographers, Hamilton, Ont., have been succeeded by the Duncan Lithographing Company.

O. Herring, dealer in paper hangings, Baltimore, Md., has admitted C. Stewart Herring and E. E. Herring to partnership, under the style of O. Herring, Sons & Co.

J. H. Bufford's Sons have just issued a new catalogue and price list. It is well compiled and printed neatly, and contains full information of all of the goods which the firm handles.

George H. Sanborn & Sons took the order for machinery to be put in at W. B. Conkey & Co.'s bindery, Chicago, and, as they state, in direct competition with others. This firm says that it is prepared at all times to fill the largest orders at the shortest possible notice, no matter whence they come.

French & Choate, 4 Bond street, New York, keep a full stock of the "Perfected" stylographic pens on hand and are prepared to supply the trade at bottom prices. The "Library" is the latest style, and with greater strength and ink capacity is equally adapted to desk or pocket use. This firm also deals in school furniture and supplies and stationers' specialties.

The demand for school-bags is so large that R. Fideau, 16 Beekman street, is compelled to work his factory and employees at his store overtime to meet the demand for them. He reports also that his school-slate trade is very active. He makes special inducements to large buyers, who would do well to examine his prices before placing their orders.

S. S. Stafford has just added three novelties to his line of specialties in inks. These embrace black writing ink for stylographic pens, blue black copying ink for stylographic pens ; also three colors for stamping inks, red, blue and violet, in brilliant colors, for ribbon and rubber stamps. Stafford's indelible ink can be used, it is claimed, either with a steel or stylographic pen. Stafford's inks are sold by every reputable stationer in Great Britain, and his trade in this country is steadily increasing. The sales, although not publicly stated at any prodigious quantity, are said to be larger than those of any other manufacturer in the United States, his contract for flint-glass bottles being larger than those of any other two ink manufacturers combined.

Among the arrivals in the trade this week were : W. J. Duffie, Columbia, S. C. ; Mr. Schnitzel, of Voight, Herpolsheimer & Co., Grand Rapids, Mich. ; L. Goldstein, of L. Goldstein & Sons, New Orleans, La. ; William Penn Firth, Wilkesbarre, Pa. ; Mr. Bailey, of Bailey & Noyes, Portland, Me. ; Charles Greene, Brookfield, Mo. ; Charles A. Fraser, Rio Platte, St. Domingo; John C. Eastman, Gainesville, Florida; Mr. Dickinson, of Dickinson & Cranston, Woodstock, Canada ; O. A. Dorman, New Haven, Conn. ; Mr. Marion, Savannah, Ga. ; Mr. Fewell, of Ivy & Fewell, Little Rock, Ark. ; C. F. Bradley, Cincinnati, Ohio, and R. M. Fairfield, Holyoke.

Myers Brothers have taken the agency of the Anchor pens, manufactured by John Walker & Co., London. These goods are highly appreciated in London. Samples will be furnished on application. This firm shows a new line of Christmas cards, which are illuminated with faces of beautiful children, photographed from life by Byrne & Co., Richmond, Surrey, England. The cards come plain and colored, and are named "Home Treasures."

Edward Holmes, well-known in connection with A. S. Barnes & Co.'s stationery department, met with a very painful accident several days ago, by making a misstep and dislocating his ankle, which has incapacitated him from attending to business. He is expected to be able to get out again some time next week.

J. H. Bufford's Sons have this week introduced a new series of folders. It comprises six designs, representing children's heads crowned with Gainsborough hats. This firm has also placed on the market a new line of reward cards illuminated in fresh and original designs, with suitable mottoes.

James D. Whitmore & Co., have brought out a very elegant line of holiday boxes, embracing plush, wood, leather, &c. Other novelties are in orders of dance, ménu cards and illuminated papeteries.

Myers Brothers have this week been opening up a large stock of R. Tuck & Sons' cards. The line is very fine, and parties wishing to see it can do so by calling at the warerooms.

The attention of the trade is invited to an advertisement of McLoughlin Brothers in another column. It ought to be carefully perused.

McCarty & Hasberg have their line of goods for the holiday season ready, and the trade generally are invited to call and examine it.

McCarty & Hasberg guarantee a good situation to a man of experience in the stationers' fancy goods trade. See advertisement.

Teresa G. Hahn, dealer in fancy goods, Brooklyn, N. Y., has made an assignment.

C. Z. Draper, publisher of the *Sun*, The Dalles, Oregon, has sold out.

W. L. Jones, stationer, New York city, is dead.

E. M. Beeman, bookseller and stationer, Evart, Mich., has sold out.

M. B. Hyneman, dealer in fancy goods, Columbus, O., has sold out.

B. P. Watson, publisher of the *Herald*, Lakeview, Oregon, has suspended.

William F. Faulkner, printer, Norwich, Conn., has sold out to John Kirchner.

A. Hartman, stationer, &c., Gunnison, Col., has sold out to A. W. Sewall & Co.

T. Pattin has bought out Thornan & Clark, publishers of the *Vindicator*, Youngstown, Ohio.

James Fitzgerald, bookseller, stationer, &c., Holyoke, Mass., has been succeeded by Fitzgerald & Co.

W. Brecken, dealer in fancy goods and stationery, Thorold, Ont., has sold out to J. C. Williams.

Knight & Remington, printers, Providence, R. I., have dissolved partnership. R. D. Knight & Co. continue.

Woodman, Tiernan & Hale, printers, St. Louis, Mo., have dissolved partnership. Woodward & Tiernan continue.

Joshua Merrill & Son, stationers, booksellers, &c., Lowell, Mass., have removed to Nos. 78 and 80 Central street, in that city.

The *Times* Printing Company's establishment, St. Louis, Mo., was damaged by fire on the night of September 4. Loss, $3,000 ; insurance, $6,000.

The Holyoke Envelope Company has issued a new net price-list and diagram of sizes of envelopes, which will be found convenient for trade reference.

Farmer, Livermore & Co., engravers, &c., Providence, R. I., have dissolved partnership. The business will be continued under the style of E. G. Farmer & Co., who assume the liabilities of the late firm.

The Powers Paper Company, J. L. St. John, agent, 536 Pearl street, this city, has a complete line of the standard diaries, and offers special inducements to parties desiring these goods for the coming year.

E. W. Blackhall was in the city a few days ago, *en route* to Europe. He carries with him testimonials which prove that his new combination striker and other inventions are meeting with great favor. He has just put in his Eclipse perforators at the establishments of the George T. Patterson Printing Company, R. & T. S. Blood, Cameron, Amberg & Co., Brown, Pettibone & Kelly, Peter Johnston & Co., and the Western Bank Note Engraving Company. His new combined striker is spoken of in the very highest terms.

Daniel Slote & Co. have a steady and increasing demand for Southerland's table book one of their few standard publications. This little volume contains a vast amount of information useful to everyone. This firm has almost ready for publication an addition to its list of school publications, titled Flaghorn's practice drawing books. They come in three numbers. It is a combination of a drawing and text book, and the retail price brings it within the reach of all. The flat-back invoice book made by this firm is meeting with great favor. This book is being improved so as to do away with any prejudice which may exist against a flat-back book, and combines all of the advantages of round and flat back books, and is the only thing of this

kind in the market, and is said to be entirely novel.

M. C. Russell has bought out Benj. Northrop, printer, Lake City, Minn.

J. E. Linde, 19 Beekman street, will remove his place of business, on and after September 15, to 165 William street.

Ink and mucilage are in great demand. The Continental Manufacturing Company, of Philadelphia, has on hand more orders than it can fill.

George V. Magee, Philadelphia, has associated himself as manager with F. Pulaski & Co., dealers in fine stationery, leather goods, &c., at 1,026 Chestnut street. He invites attention to the firm's importation of fine novelties.

Charles J. Cohen, the well-known manufacturing stationer, of Philadelphia, is seeking for an able young man as salesman in his establishment. The position is said to be an enviable one, and to those with the requisite qualifications profitable.

Levy, Dreyfus & Co., 11 Maiden lane, whose announcement will be found elsewhere, have an unusually fine variety of holiday goods, especially adapted to stationers, opticians, &c. Its line of opera-glasses is the most extensive to be seen anywhere. Mr. Dreyfus made a visit to Europe recently, and during his stay there he not only bought a large stock in that line, but also graphoscopes, magic lanterns, fine thermometers, artists' boxes of moist water-colors, drawing instruments in sets for pocket and bench use. This concern carries a full stock of everything in the optical line, embracing marine and field glasses, telescopes, spectacles, &c. It has also a very fine variety of microscopes, suitable for holiday gifts.

Henry Levy & Son are opening recent arrivals of stationers' sundries, among them being writing desks, some of which are of novel construction in their interior arrangement; the dollar desk is said to be the best in value in the market. Among the other goods are backgammon and chess boards, in leather, cloth and paper covers; crib boxes; chess in bone and wood; dominoes, checkers; water-colors, from $1 per gross to $10 a box; penwipers, comic, sentimental and useful; daily calenders in russia leather, gilt, bronze and other materials; glass inkstands and paper-weights in new designs and variegated with prismatic colors, which give these articles a novel and charming appearance; scrap and autograph albums in large variety at astonishingly low prices. This house is said to excel any other in the trade in the style and quality of these goods.

All of the fancy card houses are vieing with each other as to which will show the most novel productions. This is to be expected where there are so many competitors in the field. New designs are being constantly brought out, and, of course, each is said to surpass anything previously introduced. Among the latest productions are elegant lines of birthday, Easter and valentine cards, brought out by Willy Wallach. They were manufactured in Paris, and are all new in design, richly gotten up and elaborately finished, and will in all probability meet with a good sale. One of the series is very striking. It shows children's heads in the centre of flowers, with the petals surrounding; another shows tropical flowers at sunset. The designs in one of the series of Easter cards are very rich; besides the mottoes appropriate to the Resurrection, the halo and cross are beautifully delineated. A detailed description of this line will appear in a future issue.

John C. Koch, the senior member of the firm of Koch, Sons & Co., reached this city last Thursday by the Hamburg steamer Suevia. Mr. Koch is looking well and is in good health. As he has not visited this country for several years it is his intention to make quite a protracted visit. His firm gave him a very hearty reception. The office was decorated very tastefully and suspended in the centre of a floral piece was Mr. Koch's portrait surrounded with evergreens and forget-me-nots made up in the shape of a heart; in various colored flowers appeared the word "Welcome," and at each end of the inscription was a dove. Underneath the whole were the following lines:

When again Columbia's sun shines o'er the land and sea,
The voyage at end,
The trial o'ercome—
Then do remember me.

Mr. Koch will be glad to see any of his old friends during his stay in the country.

Charles J. Cohen, Philadelphia, has just received fifty-four cases of slate pencils from Germany, and is now prepared to fill all orders promptly.

McCarty & Hasberg are now prepared to fill orders for their $47.50 and $95 case lots, which have been previously referred to. See advertisement in another place.

A first-class narrow-guage locomotive weighs 44,000 pounds, or equivalent to the weight of 16,192,000 of Esterbrook's mammoth Falcon pens.

A SENSITIVE THERMOMETER.

Since Mr. Edison's invention of the microtasimeter, which proved so sensitive to heat, satisfactory instruments for the measurement of extremely delicate changes of temperature have not been brought out. M. Michelson, of Paris, however, recently exhibited before the French Physical Society an apparatus in its experimental form which appears to satisfy all the requirements. The apparatus is based on the principle of bimetallic thermometers, ebonite or hard rubber being chosen instead of one of the metals. Hard rubber is ten times more dilatable than platinum when exposed to heat, and a spring composed of platinum on one side and ebonite on the other will curve under the least increase of temperature. At the extremity of the spring is fixed a small glass stem forming an elbowed lever which rests against a small mirror suspended by a silk fibre. When the spring curves or straightens, as the case may be, the mirror is deflected, and a ray of light from a lamp reflected from its surface upon a scale moves up or down the divisions of the same. By giving to the spring and lever a relatively great length, the instrument can be made exceedingly sensitive, and the inventor expects to be able to measure the thousandth of a degree centigrade.

FUSING METALS WITH GLASS.

The lost arts are gradually being recovered. Among the recently discovered arts is that of fusing gold and other metals with fine pottery and glass. It was one of the embellishments of ancient Egypt, but passed away with the decay of the land of the Pharaohs, and, although numerous attempts have been made to restore it, its rediscovery was left for Theodore Farral, of Brooklyn. This gentleman has been at work upon the problem of metal and glass fusion for several years, and has made many other discoveries of ornamental value in glass-working during his experiments in search of the lost art. At last his efforts have been crowned with success, and his work is so pronounced by exports and scientists.

To make a waterproof varnish for brass models, something that will dry quickly, try the following: Shellac, 3 ounces; alcohol, 1 pint; dissolve by digestion and agitation in a covered vessel, and dilute with alcohol if not thin enough for use. Warm the metal and apply the varnish quickly.

THE UNDERSIGNED WISHES AN ENGAGEment with a First-class Book and Stationery House, Fancy Goods or Toys, either on the road, or will take management of either branch, in which he has had fifteen years' experience. Address R. A. GRIFFITH, Stationer, Des Moines, Iowa.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, SEPTEMBER 7, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

TRADE indications continue good and a great deal of business is being done. Consumptive requirements, in some quarters, promise to be very full.

TURN about is not always fair play. Now that the envelope manufacturers have "pooled their issues" and have entered into mutual agreements as to prices, an obstruction has been put in their way by certain large jobbers who are cutting in for the small trade which the envelope makers controlled to some extent. Taking advantage of best discounts, these jobbers, as we are told, are selling goods to the buyers of smaller lots at prices under the combination rates for like quantities. Whether this will excite an eruption and cause the envelope trade to break loose again, we don't know, but it certainly seems to be reasonable cause for complaint. The Standard Company can, however, adopt some plan to protect its members, if protection is necessary.

STATISTICIANS have on many occasions asserted and produced data in support of their statement, that the prosperity of a nation at large was largely influenced by the abundance or otherwise of its crops. Certainly, with good harvests and cheap food, the masses of the people are able to live at a lower cost, and, consequently, supply themselves to a greater extent with other necessities, and even with those articles entitled to be enumerated under the heading of luxuries. Following in the line of this argument, it would be fair to predict considerable activity during the coming season, as the prosperity of the agricultural classes, at all events, owing to the bounteous crops just secured is assured, and the effect on trade generally is likely soon to be apparent.

WE have received a few more communications relating to the short count in pens. One of these we print. The others give conflicting testimony, one asserting that a count made, as suggested by THE STATIONER, shows a full count to the gross, and another saying, without mentioning names, that the correspondent has "heretofore noticed a shortage in the count of steel pens manufactured by a very well-known manufacturer of this country." It can be easily understood that where pens are weighed to correspond with the weight of a given number or full gross of pens, a slight variation in the weight of metal may make a difference at times in the number, but that such a difference should be invariable or amount to as much as three-quarters of a dozen, is not to be expected. In cases like this there must be some other reason and explanation for the shortage. The question of whom the pens were bought and in what way they were bought, must first be settled. If any wrong is committed after the goods leave the factory, the manufacturer cannot, of course, be held responsible, nor should he be charged with privity to the fact. While, therefore, we are willing to aid in exposing such frauds we are unable from any of the testimony yet laid before us to connect any manufacturer with the offense. If there is common cause for complaint, the trade owe it to themselves to trace it up to its source, and when they have obtained perfect proof of the complicity of any individual in putting "short-count" pens on the market as of full count, and with obvious intent to defraud, exposure should follow.

ANSWERS TO CORRESPONDENTS.

P. S., who inquired two weeks ago about Matthews' Renewable Mems., is informed that, in addition to the firm previously mentioned, they are made by the Indianapolis *Sentinel* Company, Indianapolis, Ind., and by the Toledo *Blade* Company, Toledo, Ohio. For this information thanks are due to an old friend and correspondent.

Subscriber asks: Who makes cheap brass-edged rulers, such as those marked Tingley & Co.?

Ans.—S. O. Smith, successor to Tingley & Co., Newark, N. J.; Belcher Brothers & Co., 89 Chambers street, New York; Stanley Rule and Level Company, 29 Chambers street, New York; Eberhard Faber, New York; Kerby & Brother, 90 Fulton street, New York.

A. K. P. wants to know where Dessauer's banker's blue ink can be obtained.

Ans.—Dessauer's inks can be had of E. H. Palmer & Co., Cleveland, Ohio, or of Henry Bainbridge & Co., New York.

AN INTERESTING CRYSTAL.—A quartz crystal was some years since taken from the wall rock in the Ætna Mine, El Dorado County, Cal., 150 feet below the surface, in the centre of which is imbedded a group of black gnats, with their wings spread as if in actual flight. The crystal is as clear and transparent as glass, and there can be no mistaking the character of the insect imbedded in it. The specimen was cubical in form, with its faces about four inches by four in size.

FULL COUNT.

1121 CHESTNUT STREET, PHILADELPHIA.
September 5, 1882.

To the Editor of The Stationer:

As proprietor of the Dreka engrossing pen permit me to say a word about the short count of pens. I don't need to insist any more on the fact that the interest of manufacturers is to give the full count. Your Philadelphia correspondent has shown that very clearly. I only want to say that there is not a manufacturer who will not be glad, in case of error, to give three gross for one that has been wrongly weighed. As for me, I am one of them. Yours very truly,

LOUIS DREKA.

OUR LONDON LETTER.

[FROM OUR REGULAR CORRESPONDENT.]

5 LUDGATE CIRCUS BUILDINGS,
LONDON, E. C., August 26, 1882.

Trade is fairly brisk for the time of year, but I really can see very little worth writing you about. The novelty rush has become expended, and a steady line of business is the rule.

Mr. Lockwood has returned from the Continent, and leaves London this day for Scotland and the English lakes and Liverpool, when he will embark on the 7th of September in the Britannic. We called upon a few of the largest houses, but I am bound to say that there was somewhat a dull air about the trade. Many people are holiday keeping and out of town, and the usual bustle cannot be expected just now. A new thing will come from the first-class house of De La Rue & Co. shortly in the shape of a pen. This novelty is styled the "Anti-Stylographic Pen," and is, as the name suggests, an opponent of the numerous stylographic pens. The "anti-stylographic pen" is a pen and not a point, so that any style of caligraphy can be accomplished with it. As Thos. De La Rue & Co. always do everything well, I expect to see a great stir with this new pen, and your dealers may look out for it soon on your side.

We called at C. Goodall & Sons' establishment, and found this old and honored house full of business. They now devote most of their attention to playing-card manufacture and the best stationery only. I believe that Geo. Clulow, the soul of the firm, so far as activity and business calibre are concerned, will visit your side in the spring of next year. He would have been over this month, but was prevented at the last moment. This firm has very wisely abandoned the now popular vein of the Christmas-card trade. It prints for the trade, but has declined to enter the business arena against competition of modern days.

I quite expect to see the Christmas card trade this year prove a snare and delusion to retailers and producers alike. It is overdone altogether. And, besides, it has developed a species of amateur artistic lunacy among many very estimable ladies and gentlemen of tender years which is highly amusing. The ideas that the competitive exhibitions have produced in the minds of our aspiring artists are immense. The *modus operandi* is as follows: A young and usually very ugly lady will present herself at the office of a Christmas-card producing firm, and announce her business to be of such importance that only the principal of the firm can be treated with. This gentleman accordingly receives the young and ugly one, who produces a brown-paper parcel, with the information that it contains designs for Xmas and other cards. The principal, of course, will see them, to begin with, and after glancing at the "designs" will ask the y. and u. what her ideas of their worth are. She will say: "Well, these I can let you have for five guineas; but my friends say that this set of four is so good and original that I ought to have at least £15 or £20 for the set." The poor principal asks whether she exhibited at any of the competitive design exhibitions. She did, but through some unaccountable reason failed to obtain a prize. As a matter of fact, if you were to take a walk down Oxford or Regent street and look in the shop windows you might see a score of hand-painted cards of infinitely more original and far superior artistic finish for twenty-five cents each. But all this will find its level.

I believe that John Walker & Co. are doing good business with their wonderful productions in ivory goods. Some of the choicest things imaginable are being created by the enterprising and tasteful spirit of this house. As these goods are well known on your side, and are being introduced to your dealers by Mr. Macdonald himself, I feel that I cannot add anything further.

Pettit's Diaries for 1883 are now ready. The publications of this firm are so well known that it will be sufficient to say 1883 will fully sustain their great reputation. A few alterations have been made, notably the introduction of the Cloth Scribbling Interleaved Series, which will be known in future as the "A" series, and will be found a very useful class for commercial purposes.

J. T. Downing, of Birmingham, has just issued a handsomely illustrated catalogue of his fancy stationery hardware goods, inkstands, écritoires, &c. The book is well worth possessing, and proves the vast resources of Mr. Downing's establishment. Write to him for it.

A. Collard, 211 Oxford street, W., a well-known professor and manufacturer of the flute, has just patented a little box which he calls the "Stamphix." The object of this invention is two-fold—namely, to supply a convenient box in which to carry a dozen or more postage-stamps so that they may be ready for use at a moment's notice, and, at the same time, an apparatus for affixing the stamps to envelopes without the necessity of doing that to which so many persons object—namely, wetting the gummed surface of the stamp. The simplicity of the invention is remarkable, but its action is invariable. The "Stamphix" is a little metal box of the size of a stamp and the thickness of half-a-crown, having a cover hinged at one end, and a sliding spring-plate on the underneath side. A small roller at one end of the box completes the machine. When not in use the sliding bottom spring is shut up, so that the stamps within the box are always kept clean and flat. When required for use, the spring is withdrawn about one quarter of an inch, and this action exposes a similar area of the gummed surface of the lowest stamp. The corner of the envelope is then moistened either with the tongue or sponge, the box is placed on the wetted surface—of course with the spring side downward. The cover is then pressed down with the first finger (the box being held between the thumb and second finger). This causes the lowest stamp in the box to touch the wetted paper and adhere to it. The pressure on the cover is then removed, and the underneath spring immediately comes into action, throwing up into the box all the stamps with the exception of the lowest, which has been made to adhere by its upper edge to the wetted paper. The box is then gently withdrawn, and thus the lowest stamp is left fixed, the roller on the top end of the box as it passes over it firmly securing it by its entire surface. Anything prettier than the action of this little ingenious machine cannot be conceived. The "Stamphix" ranges in price from six guineas to one shilling, accordingly as it is made of sterling gold, silver or ordinary metal.

Last evening a destructive fire greatly injured the premises and factory of Waterlow & Sons. At present the origin of the fire is unknown.

W. F. C.

DESIGNS ON GLASS.—The following is an ingenious method of obtaining mirror-like designs on glass, devised by Leclerc: The glass, having been silvered by the chemical process, is coated with a thin and uniform layer of sensitive bitumen, and this is exposed under a transparency. The next step is to wash away the unaltered bitumen with oil of turpentine, so as to leave the bituminous design on the silvered glass. The application of moderately strong nitric acid removes the silver, excepting where it has been protected by the bitumen, so that the metallic design shows like a mirror from the reverse side of the glass. The plate may be backed by paint or any other suitable material.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, September 6, 1882.

THE MONEY MARKET.—The current rates for call loans are 5@6 per cent., with exceptions at lower figures. The mercantile demand for money is not active, and borrowers in good standing have no difficulty in obtaining accommodation at the legal rate. The stock market showed a slightly improved tone at the close, but the dealings are still moderate, and the "boom" that the bulls have been so anxiously looking for is still deferred. Government bonds continue firm. The Secretary of the Treasury has given notice that the exchange of 3½ per cent. for 3 per cent. bonds will be suspended from September 20 until November 1. Railroad bonds were quiet and irregular, but generally strong. The foreign exchange market is weak, and bankers' sterling is lower.

THE PAPER MARKET.—Fine writing papers hold their own, and there is no change to note in prices. The demand for book papers continues fair in the supply of the seasonable call of publishers, and prices remain substantially as they have been for some weeks. While the consumption of news was ssmewhat lessened during the summer months through the falling off in the circulation of the daily papers, prices have maintained a very steady line during the past three months, the deviation being within ¼c. There is a gradual improvement going on in the demand for manillas, and while the production is very large, and the competition sharp among those who handle the bulk of the product, there is a firmer tone to the market. There is more doing in straw boards, but as the production is very large, it is not believed that quoted prices are being generally sustained; in fact, some of the dealers assert that they are only nominal.

THE STATIONERY MARKET.—The fall trade is making very satisfactory progress. The fancy goods dealers continue quite active, some of the largest houses in this line reporting that they have done the heaviest August trade for many years The school supply business, which is usually pretty much over at about this time, is still quite active in some branches, some of the houses in this line duplicating orders given early in the season. The blank-book and envelope trade also are not behind any other branch in point of activity. A number of sales men representing various staple stationery houses left the city this week on their annual fall trips to different parts of the country. While there are still some out-of-town buyers visiting the city daily and ordering largely, most of the orders now received come through the mail. Favorable accounts of the prospects for trade still come in from various sections of the country, and if there is no unforeseen setback and all is realized that is so confidently anticipated, this season will be noteworthy in the history of the trade. Prices as a general thing are quoted steady.

"ABROAD."

Owing to the great success of **"At Home"** last season, we have this year issued the **New Art Gift Book—"ABROAD"**—for the Holidays; to be of uniform size and a companion piece of **"At Home."**

"Abroad" far surpasses its companion both in **Decoration and Illustration.** Each page being a study in itself. The quaint little English Children are in this Book represented on a tour of pleasure through France. Those who have been "Abroad" cannot fail to recognize the beautifully executed drawings of places of interest. The appropriate verses accompanying each illustration make this work a handsome memento and Holiday Gift. Decorated by THOS. CRANE. Illustrated by ELLEN HOUGHTEN.

Price, $2.50. "AT HOME" published this year at $2.00.

SPRINGFIELD, MASS.

TO BLEACH STRAW.

About nine ounces of permanganate of potash are dissolved in one gallon of warm water. This is done in an earthenware vessel, and cold water is then added until the liquid takes a dark-red color. The straw is left for about six hours in a tepid and weak solution of soda crystals. It is then washed carefully and introduced into the permanganate solution, in which it is continually agitated. As soon as it has taken a light brown color it is dipped in cold water, then in a bath of bisulphite of soda, strong enough to be smelled. In this bath the straw is left for fifteen minutes, and when taken out it is perfectly white.

A lacquer for steel may be made of 10 parts of clear mastic, 5 of camphor, 15 of sandarac, and 5 of elemi gums, dissolved in pure alcohol, filtered and applied cold. This varnish is transparent.

How rare is that fine courtesy which is uninfluenced by rank or wealth, but treats all worthy men and women with equal deference and consideration.

POLISHING WOOD WITH CHARCOAL.

The following method of polishing wood with charcoal, now much employed by French cabinet-makers, is taken from the *Cabinet-Maker:*

"All the world now knows of those articles of furniture of a beautiful dead-black color, with sharp, clear-cut edges, and a smooth surface, the wood of which seems to have the density of ebony. Viewing them side by side with furniture rendered black by paint and varnish, the difference is so sensible that the considerable margin of price separating the two kinds explains itself without need of any commentary. The operations are much longer and much more minute in this mode of a charcoal polishing, which respects every detail of the carving, while paint and varnish would clog up the holes and widen the ridges. In the first process they employ only carefully selected woods, of a close and compact grain; they cover them with a coat of camphor dissolved in water, and almost immediately afterward with another coat, composed chiefly of sulphate of iron and nutgall, The two compositions, in blending, penetrate the wood, and give it an indelible tinge, and, at the same time, render it impervious to the attacks of insects.

"When these two coats are sufficiently dry, they rub the surface of the wood at first with a very hard brush of couch-grass (*chiendent*), and then with charcoal of substances as light and friable as possible, because if a single hard grain remained in the charcoal this alone would scratch the surface, which they wish, on the contrary, to render perfectly smooth. The flat parts are rubbed with natural stick charcoal, the indented portions and crevices with charcoal powder. At once, almost simultaneously, and alternately with the charcoal, the workman also rubs his piece of furniture with flannel soaked in linseed oil and the essence of turpentine. These pouncings, repeated several times, cause the charcoal powder and the oil to penetrate into the wood, giving the article of furniture a beautiful color and perfect polish, which has none of the flaws of ordinary varnish. Black wood, polished with charcoal, is coming day by day to be in greater demand; it is most serviceable; it does not tarnish like gilding, nor grow yellow like white wood, and in furnishing a drawing-room it agrees very happily with gilt bronzes and rich stuffs. In the dining-room, too, it is thoroughly in its place to show off the plate to the greatest advantage, and in the library it supplies a capital framework for handsomely bound books."

GLASS COATING ON METALS.

The following method has been suggested for coating metal surfaces with glass, which may be found to answer various purposes: Take about 125 parts (by weight) of ordinary flint-glass fragments, 20 parts of carbonate of soda and 12 parts of boracic acid and melt. Pour the fused mass out on some cold surface, as of stone or metal, and pulverize when cooled off. Make a mixture of this powder with silicate of soda (water glass) of 50° B. With this coat the metal to be glazed, and heat in a muffle or other furnace until it has fused. This coating is said to adhere very firmly to steel or iron.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

THE GREAT **ERIE RAILWAY,**

LANDSCAPE ROUTE

OF AMERICA.

E. S. BOWEN, General Supt., New York.

JNO N. ABBOTT, Gen. Passenger Agt., New York.

LOST COUNTRIES FOUND BY COINS.

In citing the historical information derivable from coins, the geographical facts we acquire from them are of equal importance. A case was stated some time ago how an island of the Ægean, which had been lost, was discovered by means of a coin (the piece not bigger than a half-dime), and how recent soundings proved the existence of this isle. There was a lost city which owes place to a coin. For over a thousand years no one knew where Pandosia was. History told that at Pandosia King Pyrrhus collected those forces with which he overran Italy, and that he established a mint there; but no one could put their finger on Pandosia. Eight years ago a coin came under the eye of a numismatist. There were the letters, Pandosia, inscribed on it, but still better there was an emblem indicative of a well-known river, the Crathis. Then everything was revealed with the same certainty as if the piece had been an atlas, and Pandosia, the mythical city, was at once given its proper position, Bruttinum. Now, a coin may be valuable for artistic merit, but when it elucidates a doubtful point in history or geography its worth is very much enhanced. This silver coin, which did not weigh more than a quarter of a dollar, because it cleared up the mystery of Pandosia, was worth to the British museum $1,000, the price that they paid for it.

TO MAKE CARMINE.

Take nine ounces of carbonate of soda and dissolve it in twenty-seven quarts of rain water, to which add eight ounces of citric acid. When brought to a boil, add one and a half pounds of best cochineal, ground fine, and boil for one and a quarter hours. Filter the liquor and set it by to cool. The clear liquor is then boiled again with nine and a half ounces of alum, for ten minutes. Draw off and let settle for two or three days. Again draw off the liquor, and wash the sediment with clear, cold, soft water. Then dry the sediment. The result will be pure carmine.—*Coach Painter.*

BYRON WESTON

DALTON, MASS., U.S.A.

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the **HIGHEST and ONLY AWARD** given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from *the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute* of Philadelphia, Louisville Exposition, Medal and diploma from *United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878.* Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is *Double Sized*, and will stand any climate or the most acid of fluid inks.

☞ **Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.**
Each sheet is water-marked with name and date.

BALTIMORE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

BALTIMORE, Md., Sept. 12, 1882.

The Baltimore Oriole Festival opens to-day; the city looks gay in her holiday attire, and crowds of strangers are on the streets viewing the elaborate decorations on the newspaper offices and other buildings. If the weather only proves propitious, the affair will doubtless be even more successful than that of last year. The death of Charles A. Vogeler, of St. Jacobs Oil fame, and the man who suggested the Oriole as a fitting title to the celebration of the order, of course, put a big damper on the preliminaries and preparations; but still both citizens and strangers are now all enthusiasm and curiosity as to the mysteries of the many floats to be shown in the big procession. The printers and engravers have reaped a harvest by the Oriole, the posters descriptive of the display being numerous and elaborate, and the storekeepers and others doing business in the city outdoing themselves in their orders for cards in colors.

A. Hoen & Co. have made a very handsome programme for the occasion, and Guggenheimer & Wiel a series of beautifully printed and engraved invitations for the same purpose.

W. J. C. Dulaney & Co. and John B. Piet & Co., the two contractors of the Baltimore Board of Education for books and stationery, have gotten in their stocks, and are delivering the same to the schools.

W. J. C. Dulaney has just returned from a two weeks' vacation, looking much improved.

"The American Party," a new political organization, has just been organized, with John R. Edwards, the well-known blank-book manufacturer, as president.

Fall business with Cushing & Bailey, T. Newton Kurtz & Son, W. E. C. Harrison, and J. W. Bond & Co. has opened early and with prospects of still better things in the near future.

The Baltimore trade is in receipt of a handsome little pamphlet as a sample of Wm. H. Brett's celebrated engraved covers, and containing in its pages a list of the goods sold by the firm of Evans, Plummer & Co.

The Baltimore paper and stationery trade are pleased to learn of the coming nuptials of Z. Augustus Devoll, who has many friends in this city. They received the information through a card of invitation from Mr. and Mrs. Vickery, of Woodland Terrace, West Philadelphia, whose daughter Mary will be the blushing bride.

The following named houses have been represented in this city by their traveling salesmen for this season: C. J. Cohen, Philadelphia; Eagle Pencil Company, New York; New York Blank Book Company, New York; Robinson Engraving Company, Boston; John E. Potter & Co., New York; John Gibson, New York; Loeb & Brother, New York; C. F. Rumpp, Philadelphia; Cook & Cobb, New York; Langfeld, Turner & Andrews, Philadelphia; B. Illfelder & Co., New York; Geo. B. Hurd & Co., New York; Trier & Son, New York.

Daniel Slote & Co., of New York, have appointed Wm. B. Walker as their representative for Baltimore and the Southern States. His office is at No. 16 Hanover street. The practice of appointing local agents, such as Mr. Walker, in different sections of the country seems to be rapidly gaining favor among manufacturers. The largest and best known houses in the trade are adopting this method of bringing their goods into the market. The firm of Slote & Co. has just placed upon the market a magnificent line of plush and cloth card albums, embossed in *basso relievo*, which are already meeting with a rapid sale. Every year cards are becoming more numerous and more beautiful, and so these goods are likely to be in greater demand than ever. Mr. Walker is an energetic salesman and is held in much esteem by the trade throughout this territory. Complete lines of samples can be seen at his offices. The trade have a standing invitation.

The city is full of school-book men looking up their business for the fall business.

Mr. Hooper, formerly silent partner of John W. Kennedy & Co., has now become an active partner of the firm. Like Mr. Kennedy, he is an active, energetic gentleman, and in every way up to the times.

John B. Piet & Co. are just finishing a large publication on the State of Maryland for a Philadelphia firm. The printing of such a job in this city is a decided compliment to the Baltimore publishers who secured it. W. P. M.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, September 11, 1882.

Time flies, and so do the commercial travelers. It looks just now as if these last-mentioned gentlemen imagined themselves a match for the bald old scythe-bearer in the matter of swift locomotion. How they do get about! Why their very motions suggest all swift, flying things, such as arrows shot from one of A. H. Pounsford's or Robert Clarke & Co.'s ashen bows, or those shuttles in the power-looms, weaving silk at the Exposition. The shuttles are the thing, for they make a noise as they fly, and they keep flying—so do the travelers—while the arrows dart silently to their destination, and stop there. We'll eliminate the arrows from the comparison and adhere to the shuttles. Well, there have skipped and rattled back and forth through this city in the last few days as shuttles—that is to say, commercial travelers in the paper and stationery trade: S. A. Grant, of Birnie Paper Company, Springfield, Mass.; Mr. Hellwig, of Sherman & Hellwig, New York; Henry Birrell, of Ivison, Blakeman, Taylor & Co.; T. P. Bayes, of Cline, Miller & Co., Philadelphia; W. T. Hicks, of George B. Hurd & Co., New York; Mr. Bush, of Continental Ink Company, Philadelphia; Mr. Closson, of Plimpton Manufacturing Company, Hartford; J. H. Brunings, of New York Blank Book Company, New York; George F. Brown, of Brown & Sanson, New York; J. G. Stafford, of S. S. Stafford, New York; J. T. Watkins, of American Lead Pencil Company, New York; J. Aikenhead, of John Gibson, New York; R. L. Brown, of Kiggins & Tooker Company, New York, and that everlasting story-telling Charlie Plummer, of Evans, Plummer & Co., New York.

The Globe Files Company seems to be developing into a grand success. The quarters occupied by it on Sixth street, although commodious in the beginning, have been found too small, and it has spread into three more floors in the building adjoining by cutting through the walls. It has also made valuable additions to its working force and manufacturing facilities. There must be something in "Globe Files."

A new feature or new departure in the blank-book and stationery business is one of the things of our Queen City. It made its appearance in the shape of a Mr. "Job Lots" (two biblical names), who has started a cheap stationery place (not palace) on Walnut street, Nos. 106 and 108, and proposes to "deal out things cheap." "Mr. Lots" seems sanguine of success, and when his location and stock are considered he has reasonable grounds for harboring such "sanguinity."

Robert Clarke & Co. have just published three valuable works by Elias Longley, an early and accomplished phonographer, and many years ago the author of a manual of phonography—viz., "A Phonographic Chart," a "Phonographic Dictionary," 400 pages, and a "Reporter's Guide," all by Elias Longley. They are beauties of typography, and deserve and will have a great sale. They have also just published Horace C. Hovey's "Celebrated American Caverns," with maps and illustrations, an able and very valuable work.

Strobridge & Co., lithographers, are crowded with business. Matt Morgan, their principal

artist, is said to receive two hundred dollars a week salary, and a large number of other swift, true artists are employed and paid what would seem very large salaries. Their experiment in the finest class of work has been eminently successful. Matt Morgan has built himself a commodious mansion in the aristocratic suburb Clifton, where he has a family, to which he exhibits an exemplary attachment. He is something of an enthusiast for out-door and athletic sports, and finds time to gratify his taste in this sort of recreation.

C. T. Woodrow, of Walnut street, below Fourth, has a fine case exhibit of stationery in the Exposition, in the south corridor of the third floor. W. B. Carpenter & Co. have a case of blank books entered for "competition" on the same floor. His first intention was to enter for "exhibition only," but he (or they) changed his (or their) mind.

Facing Woodrow, and beside Carpenter, is the Lockwood Press exhibit. It is in a plain, pretty case. Its floor space is covered with a handsome rug and neat and pretty mummy cloth drapery incloses the counter on which the case is placed. A neat bit of drapery over the lower sash of the great window near-by keeps the sun off the case. A fresh little bouquet delivered daily adds life to the picture, which is completed by the presence of a young lady attendant ready to answer questions and give out samples of the Lockwood publications to worthy and appreciative people. The display in the case is not all sensational, but it is attractive, and many stop to look at it. The microscopic reproductions of the journals made by the photo process excite much interest even with those who are familiar with examples of it.

The pageant at the opening of the Exposition last Wednesday, September 6, was an immense success. Its line of march was five miles and all along both sides of the streets, sidewalks and houses were crowded, making an aggregate of ten miles of witnesses who numbered nearly a quarter of a million of people. The pageant proper, which embraced the first half of the procession and occupied a mile and a half in line, was historically scenic and allegorical. The remainder of the procession, which was quite as long, was made up of individual wagons and cars used for the most part for business advertising in a public-spirited way.

The striking feature of this Exposition is the clean-cut character of the classifications. It gives the individual departments a broad, massive look. There is no mussiness visible anywhere, nor is there any suggestion of fussiness or slovenliness. Individual exhibits are set forth with admirable taste from styles of plain, simple beauty to rich and gorgeous splendor. The great audience-room of Music Hall is resplendent at night with electric lights of various kinds in the richest settings, embracing the arc lights and the incandescent burners. This magnificent display rivals in brilliancy the most glowing imaginative pictures of fairy land.

The exhibits of plain, substantial products in another department are arranged with the most conscientious regard for the principles of taste. There is scarcely an instance of the lack of regard for the beautiful to be seen anywhere. Horticultural Garden is a miniature park.

Flowers have been in a great measure discarded from this display, and palms and large foliage plants have been substituted for them in such a manner as to produce a landscape effect. Everywhere one goes an agreeable exhilarating surprise is met. One feels it is good to be here. It is a greater honor to be an American than to be a king, and one feels throbbing with new life, the hope for the moral, material, intellectual, and one might say, the æsthetic progress of his country and his race with all these realized visions before his eyes. PRINCE WILLIAM.

TORONTO NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., September 9, 1882.

The fall trade is opening up with a cheerful hum. The farmers' barns are full and running over, and our manufacturers are pushed with orders. Good crops and busy workshops ought to make things lively all around.

Those who were so fortunate as to get away to the sea-side and other summer resorts during the hot weather have mostly returned, with reinvigorated bodies, we trust, and lighter pockets. The former should be an ample compensation for diminished funds.

Our Industrial Exhibition was opened on Wednesday, with the usual ceremony on such occasions, and is bringing a large number of visitors into the city. Country cousins, whom, as a rule, city folks are glad to show around, have an excuse to return prolonged summer visits, and it is to be hoped they will generally embrace it.

The exhibit as a whole is quite up to any we have had, though in my hasty run through the main building yesterday afternoon I missed several familiar names who in former years have occupied conspicuous places. This cannot be avoided. R. Brown, of Brown Brothers, told me they were so pushed that they really had no time to spare, and for the first time had to abandon the idea altogether. This is to be regretted, because this house has always made a large and most interesting exhibit.

W. I. Gage & Co. have a large and interesting show of their educational publications. Their school-books are equal to anything of the kind produced in every particular, and command a very large sale.

The Methodist Book and Publishing House has a fine display of its hymn books in various forms and in bindings, from common leather to the most expensive, and also miscellaneous books published by themselves. The display is both attractive and interesting, and a practical illustration of the progress we are making in this department.

Copp, Clark & Co., booksellers, publishers, &c., are old exhibitors, and have always something new and worthy of attention. Besides books, wallets, diaries, &c., they make a good show of marbled paper, which they are now manufacturing.

Wm. Warwick & Son have on exhibition blank books, from the ponderous ledger, with massive binding, executed in the very best style of the binder's art, to the cheapest class of these books, with other interesting productions in their way.

Barber & Ellis are out this morning with a full page advertisement in our two leading city papers. Beside their general stationery business, they inform the public they execute bookbinding in all its departments, make paper boxes of all kinds, and are turning out from their envelope factory 60,000,000 per annum. In addition to which they are offering $700 in prizes for original designs for Christmas cards for next season, about which you may hear more presently.

Our main streets are very gay just now and the shop windows, in many cases, exceedingly attractive. Among the booksellers, the old house of James Bain & Son are very busy, and as you come up King street the splendid establishment of Willing & Williamson is sure to arrest attention. This is one of the finest book stores in America, and is well worth a visit, not only to see the store, but the very extensive collection of books.

N. Wren & Co. have also a fine store and carry a choice stock of books and fancy stationery.

Next in order on our way up are the fine premises of Hart & Co. This firm carry the finest assortment of fancy stationery in the province.

Robert Marshall has an admirably fitted up store, and carries a choice stock of stationery, fancy goods, toys, &c.

E. Merritt, the last whom I shall mention now, farther up the street, in addition to stationery and fancy goods, carries a large stock of room paper, and I am safe in saying a finer selection of these goods cannot be found anywhere.

In conclusion I may say that all of the people I have named are as busy as they can be, and so is everybody else. I may trouble you with more exhibition tattle next week. C. H.

How to make woods, such as cherry, mahogany, &c., look like ebony, is often desirable, and a correspondent of the *Hub* gives the following directions: To imitate black ebony, first wet the wood with a solution of logwood and copperas. boiled together and laid on hot. For this purpose two ounces of logwood chips, with 1½ ounces of copperas to a quart of water, will be required. When the work has become dry, wet the surface again with a mixture of vinegar and steel filings. This mixture may be made by dissolving two ounces of steel filings in one-half pint of vinegar. When the work has become dry again, sandpaper down until quite smooth. Then oil and fill in with powdered drop-black mixed in the filler. Work to be ebonized should be smooth and free from holes, &c. The work may receive a light coat of quick-drying varnish, and then be rubbed with finely pulverized pumice-stone and linseed-oil until very smooth.

SEASON 1882—1883. SEASON 1882—1883.

L. PRANG & CO.'S

Christmas and New Year Cards.

THE previous success of our Cards, it is confidently expected, will be fully sustained, if not increased this season, an expectation which is already verified by the large advance orders received, justifying our increased efforts to bring out a line superior to all our previous productions. Our line will again comprise Double and Fringed Cards as well as Heavy Mounts. All the Fringed Cards will be provided with protectors, and envelopes will be furnished for all cards costing $1.80 and upward. The names of the artists who have contributed designs are a guarantee of the excellence of our Cards. We will name only the following :

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS L. B. COMINS,
ALFRED FREDERICKS,
WALTER SATTERLEE,
THEO. LIEBLER,

MISS F. BRIDGES,
MISS ROSINA EMMET,
THOMAS MORAN,
ALEXANDER SANDIER,
R. G. BIRCH,
GEO. J. BARNES,

MISS DORA WHEELER,
MISS FLORENCE TABER,
FREDERICK DIELMAN,
HARRY BEARD,
F. SCHUYLER MATHEWS,
H. P. KENDALL.

The literary matter in connection with our designs has been carefully attended to, among others, by MRS. CELIA THAXTER and MRS. EMILY SHAW FORMAN.

WILLIAMSON'S MAGIC POLE

For taking down from high piles, or shelves, or putting up in high places, any kind of box having a projecting lid. Delivered to any point in the United States except the Pacific Slope, for $1.25. Liberal Discount to the Trade to sell again. Patented July 12, 1881.

WILLIAMSON'S GRIP TABLET.

The GRIP TABLET is a case to hold from 1 to 150 loose sheets of Note Heads, Letter Heads, &c., binding them at once into tablet form, or blocks, without the use of glue, paste or any other contrivance, which mars the beauty of a well printed sheet, and is no larger than an ordinary tablet, and is renewable; the sheets are simply drawn out. Inclose 25 cents for a sample any desired size.

J. H. WILLIAMSON, Patentee and Mfr., 2219 Gamble Avenue, ST. LOUIS, Mo.

THE BEST DIARY.

ECONOMICAL DAILY MEMORANDUM

·1883·

ANNOUNCEMENT.

WE present for approval the "Economical Daily Memorandum" in various sizes and styles, printed on good paper, strongly sewed and neatly bound, with leather backs and printed sides, also in full leather.

Besides a space for each day of the year it contains tables of the rates for foreign and domestic postage and money orders, valuable postal information, calendar and cash account for each month.

In addition to days of the week and month, the diary is numbered for the days of the year, a valuable improvement, useful for time calculations.

Dealers, whose trade does not warrant an investment of the considerable sum required to purchase an assortment of Diaries in the usual extended variety, will find a few dollars profitably spent in buying these goods, which come within the reach of all.

Dealers, already carrying a line of other Diaries, will find the "Economical" a valuable addition. Being made without flap or tuck they can be retailed at the price commonly charged for similar plain memorandum books, and therefore extend the sale to a different class of buyers.

We will be glad to furnish the trade samples at a reduced price. We solicit early correspondence in order that books may be received in time to make a selection and place an order for early fall trade.

Owing to the limited season during which Diaries are retailed, the demand must be anticipated by both jobbers and manufacturers.

VAN ANTWERP, BRAGG & CO.,

Blank Book Manufacturers,

CINCINNATI, O

JUST OUT: THE NEW SERIES OF COMIC CARDS,

"I'M THE BRIDE."

A SET OF FIVE CARDS, EACH SET IN AN ENVELOPE.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW PATENTS.

No. 262,793. Metallic Bill File.—John C. Lang, Washington, D. C., assignor to the National Shelf and File Company, same place.

No. 262,818. Blackboard Rubber.—George Munger, East River, Conn.

A blackboard rubber having its rubbing surface composed of combined chamois skin and fabric, so as to present the two materials to the working surface.

No. 262,836. Combined Pencil Sharpener and Holder.—Philip Schrag, New York, assignor to Eberhard Faber, Port Richmond, N. Y.

No. 262,838. Paper-Bag Holder.—Richard M. Shaffer, Cranberry, W. Va.

The holder-case has a series of detachable shelves resting on side cleats and behind front stops. A slot in the centre of the rear portion of the shelves contains a sliding base provided with a pin for the bags. A twine receptacle with an eyelet is hinged to the top of the holder, and screw-eyes for the twine are located on the side.

No. 262,846. Stereoscope.—W. Le Conte Stevens, New York, N. Y.

No. 262,863. Toy Building-Block.—Abram R. Walters, Atkinson, Ill.

A toy building-block composed of a flat plate having the two hooks formed upon one of its corners, projections and suitable ears and perforations, whereby the plates can be attached together.

No. 262,886. Coin Separator.—Henry C. Barker, Sedalia, Mo.

No. 262,890. Paper-File Holder.—Willard D. Doremus, Washington, D. C., assignor, by mesne assignments, to the National Shelf and File Company, same place.

A supporting-lever for file holders having an extension beyond or above its pivotal point on the compression-follower to be used as a handle with which to set free the compressing-follower.

No. 262,891. Book-Sewing.—Edward R. Edwards, Cincinnati, Ohio, assignor of one-half to Thomas Cheshire, same place.

A method of sewing books, consisting in placing the transverse binding cords in notches on the folded side of the signature, running a thread longitudinally in the fold of one signature, and then passing the thread up through the signature and carrying it over to and into the fold of the next signature, and looping a thread around the transverse cord and longitudinal thread.

No. 262,938. Printing Press.—John Dyer and Charles O. Malmgren, Chicago, Ill.

No. 262,939. Device for Making Interest and other Computations.—Jonathan C. Ela, Boston, Mass.

No. 262,951. Paper Vessel.—Theodor H. Huewe, Dayton, Ohio, assignor of one-half to John B. Bollman, same place.

No. 262,981. Toy Spring Gun.—William S. Reed and Homer N. Parker, Leominster, Mass., assignors to the W. S. Reed Toy Company, same place.

No. 263,004. Printing Machine.—Dominick Weckerlin, Brooklyn, assignor to R. Hoe & Co., New York, N. Y.

No. 263,020. Press.—John Chase, Paterson, N. J.

The combination, with the lower platen of a press, of two rock-shafts provided with arms connected with the platen, ratchet-toothed sectors upon the shafts, a lever fulcrumed between the sectors and adapted to be operated by handbars or brakes, and carrying pawls for engaging with and actuating the sectors, and stop-pawls for holding the sectors.

No. 263,031. Pamphlet Stitching Machine.—Sterling Elliott, Boston, Mass., assignor by direct and mesne assignments to the Elliott Machine Company, same place.

No. 263,041. Noiseless Slate.—Harry C. Goodrich and Russell S. Barnum, Chicago, Ill., assignors to said Goodrich.

A slate frame provided with a series of hooks around its outer edge for receiving and retaining a muffling or binding cord.

No. 263,048. Toy Pistol.—James M. Keep, New York, N. Y., assignor to Robert Foulds, Passaic, N. J.

No. 263,055. Cabinet Desk.—Joseph A. Moore, Indianapolis, Ind.

No. 263,081. Tag Fastener.—Clotildé H. Wendell and Nancy D. Taylor, Atchison, Kan.

No. 263,168. Folding and Swinging Support and Repository for Books, &c.—Emory A. Grant, Louisville, Ky.

No. 263,203. Mount for Chromos and Prints.—A. Joseph Nurre, Cincinnati, Ohio.

No. 263,236. Tellurian.—Jeremiah Spicer, Taylor's Island, Md.

An apparatus for illustrating the changes of the seasons and diurnal motion of the earth, in which the body that represents the earth is made to move in an orbit around an illuminating device that represents the sun, at an inclination to the vertical axis of the device, and is freely suspended to preserve by gravitation the vertical position of its axis and to admit of its being turned about its own axis.

No. 263,242. Frame for Printing Photographs.—George S. Street, Moncton, New Brunswick, Canada, assignor of one-third to F. W. Richardson, Troy, N. Y. Patented in Canada, March 13, 1882, No. 14,355.

No. 263,268. Hand-Stamp.—Walter D. Wesson, Providence, R. I.

No. 263,272. Price-Ticket Holder.—Ebenezer Whyte, Kansas City, Mo.

No. 263,277. Method of Producing Flexible Supports for Photographic Reliefs.—Walter B. Woodbury, London, County of Middlesex, England. Patented in England July 22, 1878, No. 2,912; in France January 20, 1879, No. 128,544, and in Belgium January 27, 1879, No. 47,245.

No. 263,278. Surveying Instrument.—Theodore T. Woodruff, Philadelphia, Pa., assignor to Eliza M. Woodruff, same place.

No. 263,290. Book Holder.—George W. Hessler, Scranton, assignor of one-half to Thomas D. Sax, Wilkesbarre, Pa.

No. 263,347. Postal Card.—Frederick G. Mead, New York, N. Y.

The line which separates the coupon and the card may be weakened by perforating or the like, but not so much as to impair its stiffness. On writing the return message the coupon containing the outward address is removed, thereby enabling the postal authorities to readily distinguish the outgoing from the return message. This may be further facilitated by delicately tinting one side of the card, and also by a difference in the style and color of the printed instructions.

No. 263,378. Wall-Paper Exhibitor.—Octavius A. Wright, Chicago, Ill.

The border is exhibited in close contact with and covering the upper edge of the wall-paper.

No. 263,387. Eraser.—Flavius Cheney, Seneca Falls, N. Y.

The combination, with a block or handle provided with a series of parallel longitudinal grooves, all open at but one and the same end, of an erasing material provided with corresponding series of parallel longitudinal rows of perforations, each entire row opening into the same groove, and the perforations extending entirely through the erasing substance and open on the surface thereof.

No. 263,389. Fountain Pen.—Edmund Coffin, Jr., New York, N. Y.

The point section of a fountain pen, formed with an opening through the screw-threaded or joint portion of sufficient size to admit the mouth of the charging instrument for filling the pen without separating the parts.

No. 263,390. Book-Stapling Machine.—William L. Coop, Providence, R. I.

In a staple-forming and staple-driving machine, the combination, with a lever which has pivotal movement in a vertical plane, of a staple-driver to which it is connected, a staple-former provided with a presser-foot, a spring which connects the staple former and driver, and a clinching device.

No. 263,391. Book-Stapling Machine.—William L. Coop, Providence, R. I., and Samuel E. Mower, Milford, Conn., assignors to Henry G. Thompson & Son, New Haven, Conn.

No. 263,392. Lead and Crayon Holder.—Alonzo T. Cross, Providence, R. I.

In a lead and crayon holder, the combination of a slotted carrier provided with a guiding-stud and a plunger provided with a spring-pin, with a slotted screw-holding tube provided at one side of the slot with a notch serving to hold the carrier, when in its lowest position, against the forcible insertion of the lead or crayon.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Charles K. Darling, stationer, &c., Boston, Mass., is dead.

James Shannon, printer, Boston, Mass., has sold out to M. E. Howard.

H. H. Hilker & Son, newsdealers, &c., Hamilton, Ohio, have sold out.

J. C. Addington, of Addington & Green, publishers, Colusa, Cal., is dead.

O. E. Deering, newsdealer, &c., Beaumont, Tex., has been closed by the sheriff.

W. Sutton, publisher of the *Post*, Port Oxford, Ore., has removed to Ellensburg, same State.

William G. Leachman succeeds Dilley & Leachman, booksellers and stationers, Tuscola, Ill.

M. Summer, dealer in fancy goods, San Francisco, Cal., is advertised to be sold out by the sheriff.

Griffing & Co. have succeeded Rowell, Batchelder & Griffing, publishers of the *Republican*, Lancaster, N. H.

P. Carbary & Co., booksellers and stationers, Aspen, Col., have dissolved partnership. Butler & Fleming succeed.

Pastoriza & Brown, printers and binders, Houston, Tex., have dissolved partnership. J. J. Pastoriza continues.

Kent & Gore, paper-stock dealers, Boston, Mass., have dissolved partnership. Avery W. Gore continues under the old style.

E. S. & J. T. McComas, publishers of the *Mountain Sentinel*, Union, Ore., have dissolved partnership. W. H. McComas retiring.

Webster & Spooner, publishers of the *Advance*, Weymouth (East), Mass., have dissolved partnership. Clarence Spooner continues.

W. H. Bateman, of the firm of Bateman, Hooper & Co., dealers in printers' supplies, Baltimore, Md., has sold his interest to Francis H. Hooper.

The Post-Office Department has been notified by the International Bureau of the Postal Union that Costa Rica, Central America, will enter the Postal Union on January 1 next.

Charles J. Cohen, Philadelphia, has received an invoice of French crayon papers and boards; also a large shipment from Austria of the same grade of goods. The colors and tints are all of the latest approved shades.

W. H. Hoskins, Philadelphia, has now ready his sample-book of wedding invitations, visiting cards, &c., for the season of 1882 and 1883. It is more complete than any previous book, and will be appreciated by those in the trade. Parties doing an engraving business will do well to correspond with him.

The L. B. pen and pencil pocket, ready at the Library Bureau, Boston, claims to be much ahead of all rival pockets. It holds pencils or stylographic pens safer, is much quicker to use, has no stitches to rip out, is of stronger leather, and though protected by patents, is sold as low as the cheaper pockets that are exposed to free competition in prices, as anyone having scraps of leather may make them. The Bureau offers any dealer a set of eight samples for examination, retailing at $2.40, no two alike, for $1.

The Birnie Paper Company, Springfield, Mass., is having all that it can attend to in the manufacture of plain, illuminated and fancy papeteries, regular sizes of envelopes and cheap ream goods, besides orders for school paper of special sizes and ruling, according to the various views of school boards. Two new machines, the inventions of one of the firm, by which paper is ruled in the web on both sides and cut to the required size simultaneously, gives the company a decided advantage in the manufacture, as is shown by the low price at which the goods are marketed. It will soon be in shape to slit, rule and re-wind paper in the web for printers' use, several large orders for which are already waiting its acceptance. Its travelers are now out with a select line of holiday papeteries of rich material and tasteful design, which is not as is sometimes the case, "padded" with boxes of all sorts and sizes which are and probably always will be unsalable.

J. H. Bufford's Sons show this week a new line of panels. They come in a variety of very neat designs, and are said to be the cheapest in the market. The firm's line of calling cards comprises two styles, one of which is fringed and the other plain. In the latter there are seven designs, all of which are rich and very beautiful. Three new series of advertising cards are among the latest introductions. They are all in comic designs and are in modest, yet rich, tints.

John Vosberg, of Scranton, Whitmore & Co., Rochester, N. Y., Willis Whiting, of Steel & Avery, same place, and Mr. Mather have formed a copartnership, under the style of Mather, Vosberg, Whiting & Co., for the sale of books and stationery, at Buffalo, N. Y. The new firm is meeting with a cordial reception from the houses in this city and Boston. It will begin business about November 1.

C. F. Griffin, of H. Griffin & Sons, will leave England on Saturday in the Servia, on his return home from a visit of about four months to Europe. This firm has just imported a line of fancy French papers called the "Sunflower," especially adapted for bookbinders' use. These papers are of entirely new design and very attractive patterns.

O. B. Graves, dealer in paper hangings and picture frames, London, Ont., asks an extension of six, nine and twelve months. Liabilities, $4,997; nominal assets, $5,900. He owes his brother in New York, $2,500.

Wheeler & Coonrad, printers, Galion, Ohio, have dissolved partnership. Charles E. Wheeler retiring. George J. Ristine, F. E. Coonrad and A. D. Row continue under the style of the *Sun-Review* Printing Company.

James D. Whitmore & Co. are obliged to run their factory at night to fill orders for fall novelties. The factory at Holyoke is also running full and turning out large quantities of goods.

Albertson & Heltman, publishers of the *Press*, Ashland, Ohio, have dissolved partnership. William T. Albertson succeeds.

Pratt & Co., publishers and printers, Logansport, Ind., have dissolved partnership. William D. Pratt continues.

Magers & Mundy, booksellers and stationers, Weston, Mo., have dissolved partnership. T. C. Magers continues.

F. B. Washburn & Co., publishers, Middleboro, Mass., have sold out to the People's Publishing Company.

W. S. Ensign, publisher of the *Independent*, Cardington, Ohio, has sold out to Neal Brothers.

Joseph L. Pearson, printer, Washington, D. C., is dead.

John Mayerle, dealer in fancy goods, Dubuque, Iowa, is dead.

M. A. Franklin, dealer in notions, Bristol, R. I., has made an assignment.

C. W. Rupert, dealer in fancy goods, Warkworth, Ont., has assigned in trust.

Rausch & Davis, dealers in fancy goods, San Francisco, Cal., have been burned out.

Skiles & Clark, printers, Denver, Col., have dissolved partnership. Clark & Co. succeed.

L. N. Olds & Sons, booksellers and stationers, Circleville, Ohio, have dissolved partnership.

The stock of John M. Adams, publisher of the *Eastern Argus*, Portland, Me., has been attached.

The stock of J. R. Bissell, printer, St. Louis, Mo., has been slightly damaged by fire; fully insured.

Fred. W. Horn, of Koch, Sons & Co., has returned home from a visit to the Blue Ridge Mountains somewhat benefited in health, although he has not entirely recovered. He speaks of going off on a trip shortly.

Charles Dauernheim, dealer in wall paper, St. Louis, Mo., who called a meeting of his creditors at the Stationers' Board of Trade last June, a few days ago effected a compromise by paying forty cents on the dollar in cash.

Benj. Nicoll returned from Europe last week, where he has been selecting novelties. A call at his firm's warerooms will repay anyone who admires pretty things. Its holiday trade will be large. There is a style about its productions for which this house is famous.

Fringing Christmas and New Year cards is very easily done. Stationers and dealers can do it themselves and save a great deal of money. T. M. Simpson, of Philadelphia, proposes to send them any colors of fringe, put up twelve yards to a piece of each color, at very low price. The trade ought to take advantage of this proposition and apply for samples.

The fall trade at George McDowell & Co.'s, Philadelphia, is greater even than they expected. Since last spring they have doubled the capacity of their warehouse by the addition of an adjoining lot, 25 by 150 feet, in which is to be found the finest assortment of stationery goods they ever had. Their stock, as large as it is, has to be supplied with fresh goods every day, on account of the numerous orders sent by their four travelers now on the road.

At 6 o'clock on Sunday morning fire was discovered in the top floor of the large five-story iron front building at No. 53 Broadway. The whole of the upper part of the building is occupied by the American Bank Note Company. The firemen arrived quickly, and by their prompt work the flames were extinguished before they had time to spread to the lower floors. The damage, however, was heavy, as a large quantity of fine lithographing stones and engraved plates used by the company in printing were destroyed by the heat even where the flames did not reach them. The total loss is estimated at $18,000, which is covered by insurance. The first floor is occupied by the White Star Steamship Company.

The pamphlet cover roller sold by Shoemaker & Co., of Philadelphia, and for which they are sole agents, is said to be meeting with success among the bookbinders. This roller, it is claimed, does the work better and more rapidly, and dispenses with the use of the folder for rubbing the books. One of the great advantages of the cover roller is to save the covers from

being torn, which often happens by using the folder.

Charles D. Metzler, wholesale dealer in notions, Chicago, Ill., is dead.

Nathaniel Bloom is receiving goods from Europe by almost every steamer.

S. B. Hutchinson, paper-box maker, Springfield, Mass., is a petitioner in insolvency.

J. & G. Watson, dealers in notions, Chambersburg, Pa., are advertising to close out.

There is advertised in another column a store to rent in the best part of the prospering town of Evansville, Ind.

Mallen & Young, booksellers and stationers, Kalamazoo, Mich., have dissolved partnership, Mr. Young continuing the business.

Colton & Co., Minneapolis, Minn., have established a department store, admitting F. McH. Kitching to partnership. One of the departments embraces stationery.

A good piano or organ is the *sine qua non* of modern social standing. Lyon & Healy, Chicago, are prepared to furnish the best instruments made, as Steinway and other pianos, the Burdette and other organs.

Alvah Bushnell, of Philadelphia, is pushing specialties in stationery in true Yankee style. The "Handy" blotter, "Handy" clip, Burlington letter-file and other articles, are becoming widely known through his efforts.

E. G. Locke & Co., Philadelphia, have a very good demand for their fancy papers in colors, gold or silver, of which they have a large assortment. Their department of chromo cards and fancy pictures is particularly active.

The city of Yonkers is making energetic preparations for a bi-centennial celebration of the founding of its Phillipse Manor Hall. The object is to bring out not only the interesting history of the building itself, but the history of our locality from its earliest settlement to the present time. The day fixed for the celebration is the coming 18th of October. The arrangements contemplate a public procession, a mass meeting, an historical oration, and fireworks in the evening. The Governor and Legislature of the State, the mayors and other officials of our neighboring cities, historical societies, representatives of the press, and persons of prominence and distinction in the various professions and callings of life will be invited to be present.

Willy Wallach's line of valentines and birthday cards comprises several series, which include a great variety of designs. Series No. 129 consists of flowers and vines, blue flag lily, Lady Washington geranium, variagated rose, and nasturtium each growing through a hole in a wall. No. 59 is a landscape series, and shows landscapes set in nasturtiums, blackberries, and blue bell vines, sweet briars and pansies, wheat, wild poppy, buttercups, &c. No. 74 is a female figure series. No. 57 is a floral series, comprising the following designs: ferns and half blown primroses, vines hanging from old trees, with cluster of autumn leaves, and foreign ferns and "queen of the meadows" clinging to rocks. No. 33, youthful sports, shows cupids peeping into birds' nests or bathing in a water-lily pond, and sitting under umbrellas seeking shelter from the snow storm. No. 157 is a floral series, its designs being white running rose, and white honey suckle, syringa bushes and fairy vines, Japanese lily and tea vine, dwarf snowball and dwarf morning glory. No. 144 shows vinca ivy, wild pea, wild grass, fuchsias and pink running rose. No. 121 consists of artemisia and barberry vines, red single and wild roses, ragged robin and Virginia creepers, daisies, &c. No. 135 is illuminated with youthful figures, representing children gathering fruit. No. 120 shows pansies and syringas, Columbine and wild grasses, roses, &c. No. 138 has blue forget-me-nots and wild pea and blue violets and sweet briar rose. No. 69 shows red, white and yellow roses on sepia water-lined background. No. 71 represents Cupid's frolics. No. 165 is illuminated with female figures on a scroll suspended on rose bough or on pansies, on dwarf snowball bough, and on lilac bush. No. 126 shows pear and apple blossoms and wild grasses. No. 128 illustrates infantile characters in different amusements. No. 123 represents youthful dancers. No. 134 is a design of a young lady watching doves, &c. No. 154 shows artemisias, grasses, hollies and lemon blossoms. No. 41 consists of wild flowers, ferns, coral plant, swamp vine and wild lobelia. No. 61, pansies and daisies, passion flower and phlox, bridal wreath, moss rose and strawberry creeper. No. 143 represents buttercups, daisies, oats and beetles flying, ferns, sweet pea, butterflies, artemesias, ivy vines, ragged robins, wheat and crocusus. No. 20, morning glories and butterflies, roses, Japanese lily, forget-me-not, &c. No. 9 is also floral, and includes pea vine and pansies and white rose and golden rod, &c. No. 122 illustrates vine, with grasses, bees, &c. No. 142 shows human faces surrounded with flowers. No. 148 is also floral. No. 132 is in four series, representing seven Cupids playing among flowers. No. 127 shows a French peasant boy and girl love-making.

The attention of the trade is called to the advertisement of the "handy blotter" sold by Alvah Bushnell, of Philadelphia. This blotter is claimed to be the most simple and effective article of the kind now upon the market. Its handsome appearance, perfect adaptation to use, and above all its extremely low price, giving it an introduction in every town. Sample will be sent by mail on receipt of twenty-five cents.

McCarty & Hasberg are very busy and feel perfectly satisfied with their orders so far. They say that there is every indication of a long and prosperous season.

The Banker's blotting sold by A. G. Elliot, of Philadelphia, is said to be in great favor among stationers and printers. This blotting is claimed to be of fine quality, cheaper than any other paper of same grade, and of full weight.

George A. Raisbeck, the well-known representative of Philip Hake, has been confined to his house for several days by sickness, but yesterday was able to appear at his post again. W. C. Cowan is now making a trip through Canada for Mr. Hake, and Charles G. Soderbery has just returned home from a trip to Baltimore and Philadelphia, and has done very nicely.

It would require too much space to describe all of the handsome cards in the collection recently brought out by J. E. Linde, but a short description of the so-called "shape" novelties may not be amiss. They are in a large variety of shapes and styles, and the happy conception and good taste and judgment displayed by Mr. Linde in producing these pretty novelties is to be commended. There are odd shaped vases, different sizes of tambourines, palettes, palm-leaf fans with decorations of flowers as well as other small fans with pretty and odd designs. There are plaques in four designs. The tea and coffee pot is equally appropriate for coffee and tea dealers and crockery stores. The cup and saucer cards of which Mr. Linde sold six editions last season are also among the samples and sell as rapidly as ever. There are many others all equally pretty and salable. Among the folding cards of which there are several hundred designs, are many decidedly above the average. They embrace crayon and engraved lithographs printed on tinted bristols, etchings, a large assortment of chromatic covers, gold bevel edge folds, plain and with panels of various shapes, such as stars, fans and palettes some of which are decorated with flowers and landscapes sketched in water colors which look very rich and beautiful; also some new and striking odd shapes. The patent toy support was conceived, so it is claimed, by Mr. Linde for holding the vases, tea pots, &c., upright without showing the appliance from the front. It is simple, but very practical, being easily attached, and as it increases the price of the article only slightly it is very salable.

FOLEY'S PAT. IMPROVED STYLOGRAPHIC PEN.

Great reduction in price: No. 1, $1.75; No. 2, $2.50; No. 3, $2.50; No. 4, $3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

[NEW YORK, THURSDAY, SEPTEMBER 14, 1882.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

IT is an old story, but is not the less forcible that it is retold. A subscriber sends to THE STATIONER an advertisement cut from a Western paper. calling attention to its points, and then says: "The booksellers here are all anxiously waiting for the hog season to commence, to see if some of the large dry-goods houses intend to sell spare ribs and liver." The feeling is evoked by a large double-column "ad," twelve inches deep, in which a dry-goods house offers to sell books "*all direct from the publishers*," at less than the regular prices, the discount in some instances running from 33 to 86 per cent. The same firm offers to sell 50,000 volumes of standard books "at 50 per cent. less than retail prices." Our correspondent may well remark that this will "show what the trade is coming to here." It also shows what the publishing trade is coming to when it goes into the slaughtering business. By-and-by, if this sort of thing continues, literature will be altogether subsidiary to dry goods, boots and shoes, and the like, and perhaps to meats and groceries. But it is, perhaps, a good thing to educate the people in demanding cheap literature and high-priced books at cost or under. Publishers have already expressed their dissatisfaction with "library" reprints, but if good bindings and better paper and press-work go for a song, the "library" publishers will take their turn at being disgusted—but where will the book trade be?

WE have had occasion of late to note the difference between two stationery stores in the matter of taste and the results of a seeming lack of judgment in making an effective exhibit of stock. Each of the stores is on a wide street, and both are advantageously located for business. They are not a quarter of a mile distant from each other, and yet one has a constant run of custom, a large part of which passes by the other. On entering these stores we met with the same courteous attention and evident desire to please. Precisely the same character of goods was found in each. Popular toys, the best selections of fancy cards, papeteries of equal quality and from the same manufacturers, staple goods, identical in their origin, and the usual variety of articles from the cheapest to the more expensive were to be found, and yet one store has the lion's share of business even when the other is most convenient to buyers. The reason for this was not hard to find out. In one place the window-setting was most effective; the goods were displayed with artistic genius, and while there were some things which did not add to the brightness of the show-windows, they were so placed as to give only the suggestion that they were present without detracting from the *tout ensemble*. In the other case, one window was filled with copies of some of the so-called "Libraries" and a few pieces of music, not by popular authors, and looking rather the worse for wear—"only this, and nothing more;" the other window had a few base-ball bats, two or three albums, a "jumping jack," some common toys and other articles of an indifferent nature, the goods being arranged with precision and so distributed as to leave lines of demarcation between each assortment, as if to denote that the objects were of a different sort, something like the distinctions made between rich and poor in one of our fashionable churches. The effect was that of an attempt to make broad divisions in what should have been a harmonious stationery family. No one who reads this will fail to see why one store picked up the trade and the other lost it. Something of the same sort was observable within the stores, and it took a practised eye to discover that, after all, there was very little, if any, difference between the goods sold in the two establishments. If there is any stationer who wonders why his competitor gathers in the dollars while he must be content with the dimes, we ask him if he has studied effects. The show-window is an art room, the store a bazaar, and he who neglects the enticing attractiveness of the one and the artistic arrangement of the other would do better to seek his living at the end of a shovel. But to good taste there must be the adjuncts of refinement, courtesy and neatness—not primness. Personal habits require attention, and soiled linen, frowsy hair and dirty finger-nails are abominations. We have seen such things—to our disgust!

ANSWERS TO CORRESPONDENTS.

S. & S. are informed that the Buxton & Skinner Stationery Company, St. Louis, can supply them with Woolsey's decimal grain tables.

G. & W. can get "catchword" indexes from Sherman & Co., Market street, near Fourth street, Philadelphia. These indexes are out of print, but the firm mentioned has about three dozen on hand.

C. wants name and address of manufacturer of or dealer in Glegg's combination writing ink and liquid paint.

Ans.—It occurs to us that we have heard of this article, but cannot recall it. We are told that it is not known to the trade here. Worden & Hyatt's ink is said to be something of the same sort.

J. D. M. wants a good recipe for paste for paper box making.

Ans.—The paste is the same as that usually employed in printing-offices, &c. In this city it is a distinct branch of manufacture, and the principal maker says that the best paste is made in the ordinary way by boiling flour in water to the proper consistency, adding ground alum in the proportion of one handful to a barrel of flour.

B. T. wants to know who is the manufacturer or publisher of "The Practical and Scientific Watch-Maker's Descriptive Record"—a blank book with printed headings.

Ans.—J. H. Purdy & Stein, 125 State street, Chicago, Ill.

At the regular monthly meeting of the trustees of the Stationers' Board of Trade, held on Tuesday, among other applications for membership was that of Charles J. Cohen, of Philadelphia, and as usual, action was deferred until the next monthly meeting, when the names will be acted upon.

A PRINTER'S QUOIN.

Otto C. Springer, Cleveland, Ohio, has recently patented an improved printer's quoin, which consists of three wedges, one bearing on the inner side of the chase, another against the outer side of the furniture, and the third placed between the other two. The outer wedges are about the same height as an ordinary quoin. The middle wedge is opposite to, and about one-third as thick as, the outer wedges. On the inner side of the outer wedges are grooves, and the central wedge has on its opposite sides ribs, that engage with the grooves of the outer wedges. On the inner side of one of the outer wedges is a rack, and in the central wedge are a number of holes in which to place a key, that is provided near its lower end with a pinion to engage with the rack. By turning the key in one direction, the inner wedge is driven between the outer ones, forcing them laterally from each other until the quoin is tight in its place, and, by turning the key in the opposite direction, the quoin is released. The quoin is said to be simple, cheap, durable and strong, and not liable to get out of order.

Among the arrivals in the trade this week were J. E. Mason, Galveston, Tex.; J. L. Dodge, of Dodge Brothers & Shreeve, San Francisco; Wm. Reed, of John Wannamaker, Philadelphia; Mr. Youngs, Bridgeport, Conn.; A. Kennedy, of Kennedy, Strome & Co., Winnipeg, Manitoba; C. W. Yates, Wilmington, N. C.; L. E. Welch, of Welch & Muse, Albany, Ga.

A few days ago the Secretary of the Stationers' Board of Trade, sent an order to the Southworth Paper Company for a supply of a certain grade of its make of paper, and received the reply "that the services of the Board had been of such immense value to it that, in return, it would be pleased to furnish the Board, free of cost, all of the paper it required."

MONTREAL NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

MONTREAL, September 13, 1882.

Your very irregular correspondent has been silent for months. A few days resting at the sea has made him remember his sins, and on this foggy, rainy day, THE STATIONER came into mind, especially after perusing the very interesting columns of last week's number.

The state of trade is pretty much as it is all over your great country, good; yes, "booming." The crops are abundant everywhere, and manufactures are flourishing. Railway building has also tended to keep business up, especially the working on the Canadian Pacific, which is a greater undertaking than many imagine and is being pushed forward with commendable energy; of course all these things tend to increase the consumption of the stationer's wares.

The wholesale trade are busy, the paper makers being full of orders, and at paying prices. Alex. Buntin & Co.'s reports are good, their travelers sending in lots of orders.

The Canada Paper Company is also in good spirits from the same cause, and it has just declared a dividend of 10 per cent. on the year's business.

McFarlane, Austin & Robertson are pushing things, and are working in among their older competitors. They have a large stock, and are bound to do the business.

Dawson Brothers are getting their share of what is going, and their bindery is kept busily working on full time.

Morton, Phillips & Bulmer report that they have never been so full of orders in all departments, bindery, printing-office and stationery, scarcity of hands hampering them somewhat. This firm is pushing with good success the Calligraphic pen and the stout and thin buff copying papers, for which it has the sole agency in Canada.

Joseph Portier, Wm. Drysdale & Co., John Parslow, and F. E. Grafton, all report trade as good, the schools resuming after the vacation making a stir among the latter.

In the fancy goods line G. W. Clarke, W. J. Clarke, McCallum and others are doing their share.

In paper bags and manilla papers J. C. Wilson & Co. are driving hard, their travelers constantly sending home large orders.

Bennett & Co., jobbing stationers, are getting out a new line of Christmas cards, which are peculiarly Canadian, being done by Canadian artists from Canadian sports and scenes, illustrating some of our national pastimes, such as snow-shoeing, tobogganning, sleigh-driving, skating, Lacrosse-playing, &c. They will, at least, have the merit of novelty.

We are to have an Industrial and Agricultural Exhibition here this month, from the 14th to the 23d, which promises to be a good one. Some of our American friends have made entries for it, notably Carter, Dinsmore & Co., of Boston, of ink and mucilage fame. H. C. Stephens, the ink maker of London, England, will also compete.

We have not been without the usual number of travelers—yes, there has been an unusual number of them, all anxious to sell, and all having the "most complete lines," &c., &c. Your correspondent was interviewed by no less than six of them before noon one day last week. Of course, some of them had to go away empty, as he could not be accommodating enough to give each one an order. They are a nuisance, or, at least, the busy man feels them such *at times;* but then it is only legitimate and right that they should come and push their trade. They do come at inopportune times, don't they? But having been one himself, the writer tries to give them a cheerful "How d'ye do," even if he can't give them anything else.

Robert Miller, the head of R. Miller, Son & Co., has just returned from Europe, and has laid in a big stock to replace that destroyed by fire three months ago. He is looking well, and is cheerful as to the coming fall trade.

Wm. V. Dawson, Cowan's agent, is doing a large business this year, and says that his orders are heavier than ever.

I will close this rambling letter with an apology for the paucity of the news and for long silence, and then nothing much when it is written. C.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, September 13, 1882.

THE MONEY MARKET.—Monetary affairs present little change. Notwithstanding the fact that the bank reserves continue to diminish, there is less apprehension of severe stringency than there has been along back, because of the operations of the Treasury Department in paying out money for called bonds. The ruling rates are 5@7 per cent. with exceptional transactions above and below these figures. There is a moderate degree of activity, a good tone and generally better prices current in the stock market. Government bonds are active, and prices have further improved, most noticeably on the coupon four per cents. Railway mortgages are also stronger but not very active. Foreign exchange is dull and declining, the demand being light and the supply of bills drawn against cotton shipments increasing.

THE PAPER MARKET.—An improvement in the demand is quite generally reported by our city jobbing and commission houses, and this will become more marked before the close of the month, as there are still many business men absent from the city. Although the prices of paper continue to rule very low, the market has that degree of strength which was not apparent a month or six weeks ago, this being shown in the fact that, while no advance in price has been established, there is now little or no difficulty in obtaining quoted figures. Accounts continue to be received of mills having good contracts for the fall trade, and experiencing difficulty in running to their full capacity owing to the drought. We hear that one of the largest manilla paper manufacturers has advanced his price ½c., the demand for his product warranting it. The straw wrapping trade is very quiet, but as many of the mills have been compelled to shut down on account of the drought, prices are fairly well sustained, and there is still a scarcity of medium and grocery grades.

THE STATIONERY MARKET.—There is a good degree of activity in the market generally, and expressions of confidence in regard to the satisfactory results of the fall trade are quite general. The fact that the critical period for the crops has been passed, and that the yield of cereals will doubtless be larger than ever known, insures a large increase in the purchasing power of the mass of consumers and gives steadiness to values. Although most of the largest houses have as much as they can do to fill their orders, there are a number who complain that there has been a lull in trade this week, and that business has fallen off compared to what it has been lately. This they account for by the usual September trade having been done to a great extent during last month. The number of out-of-town buyers visiting the city has also fallen off, those reported this week being comparatively few. A reason given for this is that most of them remain at home to attend to their school-supply trade. By far the most active branch of the trade at present is that of school supplies. While most of it is probably over, many delayed giving their orders, with the result that they all want their goods in a hurry. Prices of staples remain steady.

SUTPHIN & WRENN, MIDDLETOWN, OHIO.

NOTES ABOUT TOWN.

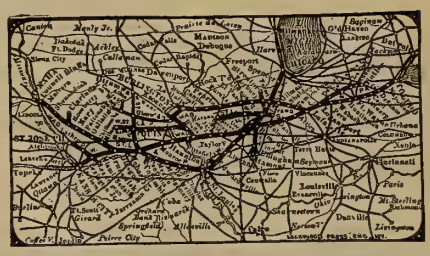
Henry Levy & Son, 477 Broadway, show a line of elegant silk and plush goods intended for toilet purposes and wall ornaments. A detailed description of these will appear in future issues of THE STATIONER.

Wm. P. Dane, New York, has been getting out a series of engraved "folders," which are tastefully conceived, finely executed, and will doubtless find ready and appreciative buyers. The subjects are all good.

Selchow & Righter, 41 John street, New York, have some new things which are likely to find quick sale. The "jolly nigger" savings bank is a feature. This firm claims the trade-mark for "sliced" objects, &c. Send for circulars.

Marcus Ward & Co. have just published for children's use a new book called "Abroad." It represents a tour to and through France, and is very instructive. The scenes described are illustrated. It is a companion book to "At Home," published by this house last year.

Geo. B. Hurd & Co. show the new hammered silver paper, which, as its name indicates, is in imitation of hammered silver. It takes very well, and they have already received good orders for it. They also show a very fine line of plush goods adapted to the holiday trade. These come in various shades of plush, and are put up in a variety of styles.



The introduction of something new, striking, and appropriate, is always desirable. This is particularly the case when it is an improvement on a certain line of goods, all the designs of which may be said to be of a stereotyped kind. In mourning goods for instance the plain black border has been used since its introduction with little or no improvement. This week, however, the enterprising firm of M. A. Reay has brought out a mourning paper which is a great improvement on anything of the kind hitherto placed on the market. The border is in imitation of the finest kind of crape. This is patented by the firm and will be ready for the trade in a couple of weeks.

Mermod, Jaccard & Co., prominent jewelers in St. Louis, have decided to add a stationery department to their business and will open it about October 1. Charles Longstreth, formerly with May, Hard & Co., is manager of this department, and is now here selecting goods for the new enterprise. It is said that Mr. Longstreth is a very enterprising young man with a host of friends in the trade.

Obpacher Brothers have a most charming variety of cards for souvenirs. Their new fringe—just introduced—is a feature. The satin palette, designed by Samuel Garre, is one of the most taking things on the market, and will be picked out for its chaste design, delicate and tasteful beauty. It is mounted on a satin-covered easel, and will sell on sight.

The progress that has been made this season in the introduction of exquisite lines of goods handled by stationers, is remarkable. In fancy goods and fancy stationery particularly, this progress is to be observed. In the latter the original and exquisite styles are far in excess of any other season, both in number and in beauty of design. Among the houses most notable in its efforts in this direction is the new but enterprising firm of Hard & Parsons, whose elegant goods must be seen to be appreciated. It has just introduced a new line of illuminated papeteries, known as Hard & Parsons' "Perfection" papeteries, the designs in which are, perhaps, the most beautiful yet brought out. They are rich yet chaste with six colors in each, and show the best effect. They are copyrighted.

ANCIENT IRON WORK.

An interesting collection of ancient wrought-iron work was recently inspected by the British Architectural Association on the premises of the Messrs. Gardner, of London. The examples of work were numerous, and may fairly be said to have represented the works of the smith for several centuries. Heretofore wrought-iron work has been but imperfectly represented in exhibitions, since ornamental iron-work generally forms a part of a building and can be removed with difficulty. This explains, to some extent, the fact that while the work of enamelers, embroiderers, potters and goldsmiths is familiar to visitors of museums, very little is known about smiths' work unless it is represented by arms and armor. Messrs. Gardner's specimens were obtained from different collectors in Great Britain, and the exhibition was intended to prepare the way for an exhibition on a larger scale, under the auspices of the Ironfounders' Company. *Martineau & Smith's Hardware Trade Journal* describes the exhibits as follows:

"Among the earliest examples are some Roman keys. They are not particularly artistic, but they are interesting as showing the extent to which iron was worked in those days. Coming to later work, there are specimens of wrought chain-mail of the thirteenth century, interesting as showing two different methods of working the links. Belonging to the fourteenth and fifteenth centuries are fine examples of treasure caskets and hinges of German work, showing the rigidity of line which is still peculiar to the German craftsman; also German and Flemish hingework of the sixteenth century on carved paneling of aumbrey doors, a period when it was the fashion to cover the wood profusely with hingework. The increased fineness of execution in work of the later dates is noticeable in a remarkable Renaissance casket of delicate *repoussé* workmanship. The outer sides exhibit figures in niches or canopies, subsidiary panels below also containing figures. Between the canopies are pilasters, which carry the entablature, the architectural design representing a temple, the various parts being jointed and fitted together with marvelous perfection; the top of the lid is surmounted by a recumbent figure in solid metal. The casket, however, appears only to have been lent for the special occasion. Rivaling this in beauty of execution is a master-key for keeping other keys under lock, which is said to have belonged to Mary Queen of Scots, and has been lent by Mr. Truefitt. The ornament could hardly be more delicate if the material were lace. Conspicuous in the handle are finely-wrought initials, and a little inspection reveals a carefully designed thistle. Two quaintly-worked keys date respectively from the time of Edward IV. and the French King Louis. A remarkable *repoussé* copy of the picture after Vandyke, representing the children of Charles I., and which probably was English work, was valued at £400. A curious specimen of German work is seen in a bracket, intended probably to hold a sign; and there is a quaint bracket, a lift for font cover, from St. Michael's, Queenhythe. A pendant for a chandelier from St. Catherine Cree is said to have been designed by Inigo Jones. There are several examples of grilles. A French work, of the date of Francis I., in which the reticulations are formed into *fleurs-de-lis*, is of marvelous beauty. A grille of flat Venetian work is worthy of notice, examples of this class being unknown here. A Florentine balcony of the seventeenth century shows a fine specimen of interlacing work. Among the interior fittings deserving of attention are a piece of Italian staircase and handrail work, fire-place furniture with crescents for holding charcoal, hooks for suspending pots, taken probably from a guard-room, fire irons, dogs, &c., exhibiting much elegance of design. A pair of fire-dogs of Venetian workmanship are adorned with a profusion of flowers cut out in the metal; the effect is curious if not quite satisfactory as far as fitness of purpose goes. A wrought-iron chest of elaborate execution occupies a prominent position, the property once of some royal personage, doubtless, from the crown upon it. Near it are two oak traveling chests of massive proportions, one marked with a cardinal's seal; the woodwork is largely covered with ornamental bands and scrolls. There are several examples of the art of the armorer; among them is a sixteenth century stiletto, with punctures in the blade to carry poison. It may be described as a fluted or a four-edged weapon, the edges, moreover, being slightly turned over. An Elizabethan dagger, with priming pan, is probably unique, though perhaps not uncommon at that period. In the collection of rapiers, the ornamentation of the hilts is worthy of inspection. A double candle-holder with shade, besides showing merit of its own, is interesting as having belonged to William Hogarth. A Nuremberg door-knocker, representing the arms of Austria, among elaborate examples of these articles, is shown. The bare reproduction of such a work of art in these days would scarcely be possible. A Queen Annie bracket, the richness of work in which is altogether unique, forms another interesting exhibit. Examples of hingework, treasure caskets, &c., are also well represented; the whole forming a collection which pays an ample tribute to the skill of the smith of past centuries."

Erie and Chicago Line

PASSENGER ROUTE.

THE SHORTEST, QUICKEST, AND SAFEST ROUTE to all points EAST. Fine tracks and lowest rates. The only route running **PULLMAN PALACE HOTEL COACHES** from

CHICAGO to NEW YORK,

LEAVING AT 6.10 P. M.

and the only route by which passengers from the NORTH-WEST can connect at CHICAGO and secure locations in these Palace Hotels on Wheels.

You should travel by the **E. & C. LINE,**

BECAUSE its trains run **through** from Chicago to New York, avoiding the dangers of transfers, the risks attending the changing of cars, and the possibility of missing connections.

BECAUSE the PALACE HOTEL COACHES run in connection with its trains, furnish Meals as good as can be had at any first-class hotel, and allow passengers to eat with as much comfort as at their own homes.

BECAUSE not one passenger has been killed or even injured on its trains since the opening of the line five years ago. Nor has an accident of any kind occurred.

BECAUSE the great variety of scenery on this line renders the journey pleasant and profitable.

BECAUSE provision has been made for running the trains from Mansfield, "Special" to destination, whenever they arrive after departure of train forming regular connection. This insures a continuous passage between New York and Chicago.

THE SIDDALL ENVELOPE

MADE BY

THEODORE W SIDDALL

1706 Venango Street Philadelphia

I make heavy manilla envelopes of any size and shape: either flat or bellows pattern

NEW KIND OF GARDEN LABEL.

It has been remarked that resistance to the effects of the weather is an indispensable necessity with garden labels. Porcelain and enameled labels come at a price relatively too high for such articles, and hence an attempt has been made in Germany to provide, at a moderate price, an article combining the requisites named. This has been met by the production of a glass tube open only at one end. The opening can be closed by a cork or by sealing wax, &c. The label is simply written and placed inside the tube, which is first warmed in order that any sudden change of temperature may not cause sweating and consequent obscurity of the surface of the glass. The size recommended is eight inches long, with an opening of about half an inch. The glass should be about one-twelfth of an inch in thickness. These tubes are intended to be placed in the beds close to the plants they refer to.

This kind of label is specially adapted for use in gardens. A more elegant description for use in drawing-rooms and conservatories is also spoken of in one of our contemporaries. The tubes are in this case shorter and wider. They can be closed by an india-rubber cork with a ring attached to it through which a string is drawn. It is suggested for the tubes to be hung to the plant itself or to a small ornamental staff at the side. The tubes can be polished, painted, or gilded, and the paper ticket also admits of ornamentation as may be desired. The advantages of economy and the easy changing of these markers from one plant to another are points alluded to as being in favor of this new adjunct to ornamental gardening.

The following method of tracing on glass for the lantern, appears to be satisfactory: A piece of finely ground glass is rubbed over with a trace of glycerine, in order to make it as transparent as possible. It is now easy to write or draw on the prepared surface with a hard and finely pointed blacklead pencil, and the glass is so transparent that the finest detail of any engraving over which it may be placed can be seen quite distinctly. The drawing having been finished, the plate is washed with water, in order to remove the glycerine, and dried. A thin coat of Canada balsam or of negative varnish now serves to render the slide permanently transparent and ready for the lantern.

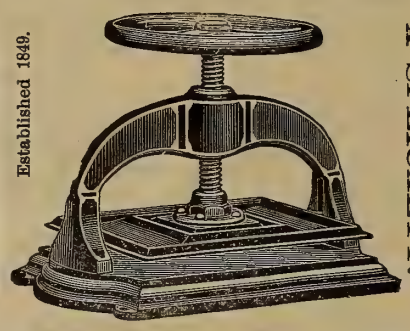
Leroy W. Fairchild has issued a very handsome circular in antique style, calling attention to his line of novelties.

NEW DESIGNS.

Referring to new designs now on the market and about to be placed there, a city reporter says: "New designs in plaques are being gotten up all the time, but the Hungarian pottery plaque, which will be put on the market about the middle of this month, is certainly entitled to be ranked among the novelties. The plaque is incased in a rich velvet frame, and upon its decorated surface is a bunch of artificial roses with leaves and stem, all looking as fresh and natural as if they had just been plucked from the bush."

In porcelain services the reporter saw a set comprising 145 pieces, which contained no less than fifteen different patterns. There were the oyster-shell plates for raw oysters, dishes in the form of fish, plain plates for the roast, four-cornered plates for the salad, diamond-shaped plates for the fruit, and many varieties of shapes for the larger dishes. The soup tureen resembled a green turtle on its back, and the fish-platter was a good-sized salmon made of china. The punch-bowl was a yellow pumpkin nestling among a number of clipped cornstalks, and the punch glasses were fashioned after the heads of various animals. For the ice-cream there were dainty dishes in the form of leaves. The fruit plates, it should be stated, were exquisitely decorated with pictures of fruits, each plate being differently ornamented. For salt-cellars and pepper-boxes there were miniature china mice, owls, pigs, and birds. The flagon for the cognac was the daintiest thing of all. It was of blue glass and cornucopia-shaped, with the large end downward. It rested on a six-wheeled chariot of gold, and upon the platform of the little vehicle surrounding the cornucopia were twenty-four tiny glasses of every conceivable color. A golden faucet inserted in the bottom of the blue flagon intimated how the glasses were to be filled.

Unique fruit-dishes are now made of majolica or fine crockery ware in the form of melons cut in half and resting on silver standards.



Manufacturers of gas-fixtures have introduced a new design for crystal hall lights this fall. It consists of hanging lamps made of brass and prismatic glass. Some quaint effects are also produced for hall lights with colored cathedral glass and polished brass.

A table-knife for the use of one-armed people has been invented and may be found at almost any cutlery store. The blade is cimeter-shaped and broad, its curved end having five or six teeth to serve in place of a fork. The latest thing in scissors are flimsy, pearl-handled affairs, attractively incased in morocco and plush boxes.

WARNING!

Huntingdon, Pa., Sept. 1, 1882.

IT having come to my notice that a party, carrying a small line of my samples on commission, and not a regular agent in my employ, has been in some cases collecting small amounts, in others getting a loan of $5.00 to $10.00 on various pretexts, on his own account, or lifting goods from my customers, the amount to be credited to their account, &c., &c. The Trade and my friends will please take notice that no one is authorized to do any collecting, or in fact any financial business, in my name. **Positively all this must be done with the house direct or it will not be recognized.** In any exceptions to this rule the party will show his authority by a personal letter, with my signature, acknowledged before a Justice of the Peace. PLEASE REPORT ANY CASE OF THIS KIND AT ONCE, with full particulars, and I will use all efforts to protect my friends who have (in kindness to me no doubt) extended any favors to unauthorized parties.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for* 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

JNO N. ABBOTT, Gen. Passenger Agt., New York.

TRANSPARENT PRINTING ON A NEW PLAN.

Eugenie Victoria Emery, of Canterbury, has lately invented a new kind of transparent, semi-transparent or opaque sheets, composed of gelatine or other substances capable of being formed into flexible sheets, such as sheet gelatine, with words or designs in relief thereon or impressed therein, to be employed for various useful and ornamental purposes, such as screens, Christmas and New Year, birthday, visiting and other cards, and for all purposes for which such sheets are or may be made applicable.

Gelatine (for example) is melted, and then run on a piece of glass (by preference) having the desired words or design cut therein, or molded thereon, so that the gelatinous substance may run therein, and when dried by any suitable process and taken from the mold, a transparent, or semi-transparent, opaque flexible sheet with the desired words or design thereon in relief or impressed therein, will be produced, or the substance may be otherwise suitably molded to attain such end. The glass or other material on which the substance employed is run, should have a rim or frame all round, so that a sufficient quantity of such substance may be retained in order to form a sheet of the desired thickness.

The gelatine or other material of which the sheet is to be manufactured, is run or otherwise placed on the mold, the surface of which may have raised letters or figures or designs thereon or impressed therein, and these molds will be made of glass, metal, or other suitable material, having the desired surface words or designs in relief, embossed, cut, impressed therein, or otherwise suitably molded to attain such object. These molds, according to the way in which the sheets are to be produced, will either be placed above and below the substance of which the sheet is to be formed, or a mold may be placed both above and below the substance, so that the letters and design will be formed on each side of the sheet when taken from the mold. Before the sheets are taken from the molds, they are dried in the ordinary way of drying gelatine sheets, or by any other suitable process, after which the sheet may be taken from the mold by cutting such sheet all round, and detaching same by passing a knife underneath.

This is simply a process of stereotyping in gelatine; only it is carried no further than the conductor of the matrix, which forms the desired production.—*British and Colonial Printer and Stationer.*

ENGLISH HAND-MADE PAPERS

ORIGINAL EYNSFORD MILLS,

WATER-MARK:

"FELLOWS"

KENT, ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers for Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

Proprietor: JOSEPH ARNOLD, Eynsford Mills, KENT, ENGLAND.

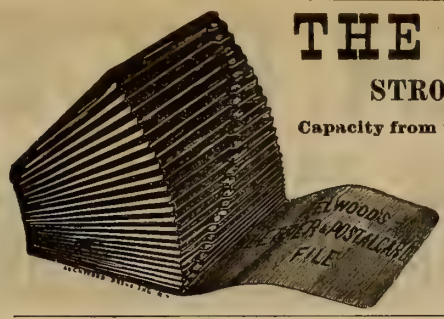
Illuminated Local Papeteries are the great favorites over all Papeteries and Writing Papers of the day.

Any Dealer that has not received Sample Sheets of Designs for Local Papeteries can be supplied by writing for them.

St. Paul.

HISTORY OF ENAMEL.

The *Hamburger Nachrichten* contains an interesting account of a lecture given by Dr. Fohring on the subject of enamel, particularly with reference to the external and internal ornamentation of vessels and articles of daily use of every description. The earliest specimens extant he stated to be the Egyptian figures in the Louvre and the British Museum, while he considered the point as to whether the Greeks and Romans used enamel to be open to discussion. On the other hand, he remarked that the so-called barbaric nations of the third and fourth centuries are known to have attained proficiency in the use of enamel, from the *reliquial* of those ages to be seen in the museums of Mayence, Treves, Wiesbaden, &c. After the sixth century there would seem to have been a practical cessation of the art in Western Europe, and the date of its revival is assigned to the eleventh century. This dormant situation of the art does not seem to have been the case in the East, as Byzantine artists practised it successfully, while it was neglected elsewhere.



The various kinds of enamel were described by Dr. Föhring with minuteness, and he dwelt on the distinctive features of goldsmiths', or encrusted enamel, relief enamel, and painted enamel. He also gave some details about cellular enamel, which has derived additional elements of interest from the specimens brought in late years from China, notably from the Summer Palace at Pekin. The Japanese succeeded, about twenty years ago, in producing this *Email cloisonné* upon porcelain. The Oriental mode of fixing the threads of metal remained for a long time one of the secrets connected with the process, but has lately become known to Western industry by the explanations of Japanese workmen engaged in European factories.

Dr. Föhring claimed for Germany a foremost position in the revival and culture of the art, and brought forward many proofs in support of this assertion. He also spoke of the translucent relief enamel which is much used in Italy, and which follows out the ancient traditions of the art. He referred to the altar in the Cathedral of Orvieto as being one of the most remarkable specimens of this class of work now in existence.

At the conclusion of the lecture, discussion was invited on the subjects referred to, and some valuable specimens of the art in question having been placed at the disposal of the assembly by local *connoisseurs*, the subsequent proceedings were rendered specially interesting by the explanatory remarks of various authorities of eminence who had attended the lecture.

A Costly Book.—At the sale of the Beckford Library the gem was Corneille's *Rodogune Princesse des Parthes*, Tragedie (1660), with a frontispiece engraved by Madame de Pompadour. This splendid quarto volume is a very fine specimen of Pandeloup's binding, bound in yellow morocco, *double* with black, the sides and back inlaid with variegated leathers and elaborately tooled in gold, with silk fly-leaves and gilt edges. This was Madame de Pompadour's own copy, and has her crest impressed as the centre ornament on the sides. The work was printed under her own eyes, in her own apartment, the Palace of Versailles, for presents only, now extremely rare. A very brisk competition was set up for the possession of this book, which Mr. Quaritch finally obtained for £325.

It is easier to suppress the first desire than to satisfy all that follow it.
